Directors' statement of responsibility Auditors' report Annual accounts Report of the directors

## <sup>©</sup>Sabadell

The undersigned, MIQUEL ROCA I JUNYENT, Secretary to the Board of Directors of BANCO DE SABADELL, S.A., with registered offices in Sabadell, Plaça de Sant Roc, 20, and VAT number A08000143

#### DOES HEREBY CERTIFY THAT

In the Board of Directors' meeting held today, duly called in writing on January 17<sup>th</sup> 2017 and with the personal attendance of Mr. José Oliu Creus, Mr. José Javier Echenique Landiribar, Mr. Jaime Guardiola Romojaro, Mr. Joan Llonch Andreu, Mr. Joaquín Folch-Rusiñol Corachán, Ms. María Teresa García-Milá LLoveras, Mr. José Ramón Martínez Sufrategui, Mr. José Luís Negro Rodríguez, Mr. José Manuel Martínez Martínez, Mr. David Martínez Guzmán, Ms. Aurora Catá Sala, Mr. José Manuel Lara García, Mr. David Vegara Figueras and Mr. Manuel Valls Morató, under the chairmanship of Mr. Oliu, and the undersigned acting as Secretary and as Vice Secretary Ms. María José García Beato, after due deliberation and amongst other items that do not contradict them, the following was unanimously resolved:

The members of the Board of Directors hereby declare that, to the best of their knowledge, the individual and consolidated annual accounts for the year 2016, approved by them today and drawn up in accordance with the applicable accounting principles, give a true and fair view of the assets, liabilities, financial position and profit or loss of Banco de Sabadell, S.A. and the enterprises included in the consolidation taken as a whole, and that the management reports respectively approved by them include a fair review of the development and performance of the business and the position of Banco Sabadell, S.A. and the enterprises included in the consolidation taken as a whole, together with a description of the principal risks and uncertainties they face.

Express mention is hereby made of the reading of the minutes of the aforesaid meeting of the Board in which the above resolution was unanimously agreed upon and the approval of such minutes when the meeting was adjourned by both the Secretary's signature and Chairman's approval.

In witness whereof, I hereby issue this certificate with the approval of the Chairman and the signature of the Secretary of Banco de Sabadell, SA, in Barcelona on this day, January 26<sup>th</sup> in the year two thousand and seventeen.

#### INDEPENDENT AUDITOR'S REPORT ON CONSOLIDATED ANNUAL ACCOUNTS

To the shareholders of Banco de Sabadell, S.A.:

#### Report on the consolidated annual accounts

We have audited the accompanying consolidated annual accounts of Banco de Sabadell, S.A. (herein after the parent company) and its subsidiaries (herein after the Group), which comprise the consolidated balance sheet as at December 31, 2016, the consolidated income statement, the consolidated statement of recognised income and expenses, the consolidated statement of changes in total equity, the consolidated cash flow statement and related notes for the year then ended.

#### Directors' responsibility for the consolidated annual accounts

The parent company's directors are responsible for the preparation of these consolidated annual accounts, so that they present fairly the consolidated equity, financial position and financial performance of Banco de Sabadell, S.A. and its subsidiaries, in accordance with International Financial Reporting Standards, as adopted by the European Union, and other provisions of the financial reporting framework applicable to the Group in Spain and for such internal control as directors determine is necessary to enable the preparation of consolidated annual accounts that are free from material misstatement, whether due to fraud or error.

#### Auditor's responsibility

Our responsibility is to express an opinion on these consolidated annual accounts based on our audit. We conducted our audit in accordance with legislation governing the audit practice in Spain. This legislation requires that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated annual accounts are free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the consolidated annual accounts. The procedures selected depend on the auditor's judgment, including the assessment of the risks of material misstatement of the consolidated annual accounts, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the parent company's directors' preparation of the consolidated annual accounts in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the presentation of the consolidated annual accounts taken as a whole.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

#### Opinion

In our opinion, the accompanying consolidated annual accounts present fairly, in all material respects, the consolidated equity and financial position of Banco de Sabadell, S.A. and its subsidiaries as at December 31, 2016, and its consolidated financial performance and its consolidated cash flows for the year then ended in accordance with International Financial Reporting Standards, as adopted by the European Union, and other provisions of the financial reporting framework applicable in Spain.

#### Report on other legal and regulatory requirements

The accompanying consolidated directors' Report for 2016 contains the explanations which the parent company's directors consider appropriate regarding Banco de Sabadell, S.A. and its subsidiaries' situation, the development of their business and other matters and does not form an integral part of the consolidated annual accounts. We have verified that the accounting information contained in the directors' Report is in agreement with that of the consolidated annual accounts for 2016.Our work as auditors is limited to checking the directors' Report in accordance with the scope mentioned in this paragraph and does not include a review of information other than that obtained from Banco de Sabadell, S.A. and its subsidiaries' accounting records.

### NOTES TO THE CONSOLIDATED ANNUAL ACCOUNTS OF THE BANCO SABADELL GROUP

For the year ended 31 December 2016.

### Note 1 – Activity, accounting policies and practices

#### 1.1. Activity

Banco de Sabadell, S.A. (hereinafter, also referred to as Banco Sabadell, the bank or the Company), with registered office in Sabadell, Plaza de Sant Roc, 20, engages in banking business and is subject to the standards and regulations governing banking institutions operating in Spain. The functions of prudential supervision of Banco Sabadell on a consolidated basis were taken on by the European Central Bank (ECB) in November 2014.

The bank is the parent company of a corporate group (see Schedule I) whose activity it controls directly or indirectly and which comprise, together with the bank, the Banco Sabadell Group (hereinafter, the Group).

#### 1.2. Basis of presentation

The Group's consolidated annual accounts for 2016 have been prepared in accordance with the International Financial Reporting Standards (IFRS) adopted by the European Union applicable at the end of 2016, taking into account Bank of Spain Circular 4/2004 of 22 December 2004 and amendments thereto and other financial reporting regulations applicable to the group, in order to fairly present the Group's equity and consolidated financial situation as at 31 December 2016 and the results of its consolidated operations, changes in equity and cash flows in 2016.

The consolidated annual accounts have been prepared based on the accounting records kept by the bank and each of the other entities in the Group, and include adjustments and reclassifications necessary to ensure the harmonisation to the accounting principles and policies and the measurement criteria applied by the Group, which are described below.

The information provided in these consolidated annual accounts is the responsibility of the directors of the Group's parent company. The consolidated annual accounts for 2015 were signed off by the directors of Banco Sabadell at a meeting of the Board on 26 January 2017 and will be submitted to the shareholders at the Annual General Meeting for approval. It is expected that the shareholders will approve the accounts without significant changes.

Except as otherwise indicated, these consolidated annual accounts are expressed in thousands of euros. In order to show the amounts in thousands of euros, the accounting balances have been subject to rounding; for this reason, some of the amounts appearing in certain tables may not be the exact arithmetic sum of the preceding figures.

### Standards and interpretations issued by the International Accounting Standards Board (IASB) coming into effect in 2016.

During 2016, the following standards have been enforced and have been adopted by the European Union:

Standards	Title
Amendment of IAS 19	Defined Benefit Plans: employee contributions
Amendment of IAS 16 and IAS 38	Clarification of Acceptable Methods of Depreciation and Amortisation
Amendment of IFRS 11	Accounting for acquisitions of interests in joint operations
Amendment of IFRS 10 and 12 and IAS 28	Investment entities: Applying the consolidation exception
Amendment to IAS 1	Disclosure initiative

Amendment to IAS 19 "Defined Benefit Plans: employee contributions"

These amendments to IAS 19 clarify and amend the accounting requirements for employee or third party contributions to a defined benefit plan.

In particular, if the amount of the contributions is independent of the number of years of service (for example, when contributions are a fixed percentage of employee wages), it allows an entity to recognise these contributions as a reduction in the cost of the service during the period in which it is rendered, instead of allocating the contributions to service periods.

If the amount of the contributions depends on the number of years of service, the amendments require an entity to allocate these contributions to service periods using the same allocation method required in IAS 19 for gross profits.

#### Amendments to IAS 16 and IAS 38 "Clarification of acceptable methods of depreciation and amortisation"

The amendments to IAS 16 and 38 aim to clarify the use of revenue-based depreciation methods. Both standards establish that the depreciation method used must reflect the pattern of the expected consumption by the entity of the asset's future economic benefits. The IASB had indicated that, except in certain cases, a depreciation method based on revenue generated by an activity that includes the use of assets is not an appropriate method. This is because it would depict the pattern of economic benefits generated by operating the businesses (of which assets form part) instead of the economic benefits that are being consumed through the use of assets.

#### Amendments to IFRS 11 "Accounting for acquisitions of interests in joint operations"

This amendment to IFRS 11 provides accounting guidance for the acquisition of interests in a joint venture whose activities constitute a business. In particular, it sets forth that all of the principles contained in IFRS 3 "Business combinations" and other IFRS concerning the accounting treatment of business combinations should be applied, with the exception of those that conflict with the guidance of IFRS 11 (as amended).

#### Amendments to IFRS 10 and 12 and IAS 28 "Investment entities: applying the consolidation exception"

The amendments clarify three aspects of enforcing the requirement for investment institutions to measure their subsidiaries at fair value instead of consolidating them. These amendments:

- Confirm that the exception to the submission of consolidated financial statements shall continue to apply to the subsidiaries of an investment institution when such subsidiaries are, at the same time, the parent companies;
- Clarify in which circumstances a parent investment institution should consolidate a subsidiary that provides services related to the investment instead of measuring that subsidiary at fair value; and
- Simplify the application of the equity method for an institution which is not in itself an investment institution, but which has interests in an associate entity which is an investment institution.

#### Amendments to IAS 1 "Disclosure Initiative"

The amendments to IAS 1 arise from the IASB initiative for the improvement of information reported by institutions, and introduce changes to the current wording of IAS 1 for the purpose of facilitating the use of professional judgement in the preparation of such information. These amendments affect items such as relative importance, the structure of the notes and information to be disclosed on accounting policies, among others.

There have been no significant effects caused by the application of these accounting standards on these consolidated annual accounts of the Group.

#### IASB-issued standards and interpretations not yet in effect

At the date of preparation of these consolidated annual accounts, the most significant standards and interpretations for the Group that have been published by the IASB but which have not yet come into force, either because their effective date is subsequent to the date of the consolidated annual accounts or because they have not yet been endorsed by the European Union, are as follows:

Standards and Interpretations	Title	Mandatory for years commencing:
Approved for application in the EU		
IFRS 9	Financial instruments	1 January 2018
IFRS 15	Revenue from contracts with customers	1 January 2018
Not approved for application in the EU		
IFRS 16	Leases	1 January 2019
Amendments to IAS 12	Recognition of deferred tax assets for unrealised losses	1 January 2017
Amendments to IAS 7	Disclosure Initiative	1 January 2017
Clarifications regarding IFRS 15	Revenue from contracts with customers	1 January 2018
Amendments of IFRS 2	Classification and measurement of share-based payment transactions	1 January 2018
Amendments to IFRS 4	Applying IFRS 9 Financial Instruments with IFRS 4 Insurance Contracts	1 January 2018
Annual improvements to IFRS	Cycle 2014 - 2016	1 January 2017/ 1 January 2018
Amendments to IAS 40	Investment property transfers	1 January 2018
Interpretation of IFRIC 22	Foreign currency transactions and advance consideration	1 January 2018

The Group carried out an assessment of the impacts resulting from these standards and decided not to exercise its option to adopt early, where possible. In addition, unless otherwise indicated below, Management considers that their adoption will not have a significant effect for the Group.

#### Approved for application in the EU

#### IFRS 9 "Financial Instruments"

The IASB published the full version of IFRS 9 in July 2014, the date of first application being 1 January 2018. This standard, which will replace the current IAS 39 "Financial Instruments; recognition and measurement", lays down a comprehensive set of accounting requirements for recognising and measuring financial assets and liabilities.

Regarding the classification and measurement of financial assets, the approach of IFRS 9 is based on considering, jointly, both the characteristics of the cash flows derived from the instruments and the business model under which they are managed. In practice, this reduces the number of portfolios and impairment models currently envisaged in IAS 39, among them, the classifications of "Available-for-sale financial assets" and "Investments held to maturity". Financial assets with cash flows that represent only principal and interest payments and which are held under a business model with the objective of receiving those flows are to be measured at amortised cost. In contrast, if the objectives of the business model are both to receive cash flows and sell the assets, the assets should be measured at fair value and the measurement changes should be recorded under equity. The remaining financial assets, including those containing implicit derivatives, are to be measured in full at their fair value through profit or loss.

The most substantial changes of IFRS 9 as regards to the current IAS 39 model involve value impairments based on expected losses incurred by credit risk. In particular, IFRS 9 requires institutions to base their measurements of provisions for insolvency applying a focus on impairment that differentiates between three conditions. The measurement of expected losses depends on whether there has been a significant increase in credit risk since the initial recognition, or if the asset has been impaired, such that: (i) the expected loss in a time horizon of 12 months (condition 1) applies to all assets (since their initial recognition) provided that there is no significant increase in credit risk, (ii) the total expected loss for the effective life of the assets (expected lifetime loss) must be recorded when a significant increase in credit risk occurs, measured on an individualised or collective basis (condition 2), or when it is considered that assets have been impaired (condition 3). Financial interests on financial assets and classified in condition 3 shall be accrued at the net accounting value.

An assessment shall be made as to whether there has been a significant increase in credit risk based on reasonable and verifiable information that is available at no cost and that can be obtained without the need for disproportionate efforts, which indicates that the credit risk has increased since the initial recognition and shows historic, current and forward-looking data.

Changes between the new model for expected loss described in IFRS 9 as regards to the current model for incurred loss set out in IAS 39 include the following:

- IFRS 9 recognises losses due to credit risk for all common loan and credit activities originated in the Group and all fixed-income (sovereign or otherwise) securities that are acquired, and irrespective of their credit rating at the time of their initial recognition.
- More judgements will be necessary to determine forward-looking information and credit scenarios which could arise during the life of operations, and to determine how these scenarios are included in the assessment of expected loss.
- There will be major factors which could give rise to changes in expected loan losses, for example, the introduction of mechanisms to reclassify financial assets from condition 1 to 2.

In relation to financial liabilities, the categories envisaged in IFRS 9 are similar to those currently contained in IAS 39 and their measurement will not be altered except for the requirement to record the changes in fair value related to own credit risk as a component of equity in the event that financial liabilities to which the fair value option has been applied, have been recorded.

For hedge accounting (excluding the part relating to macro-hedges) the granularity of the current requirements under IAS 39 has been replaced by a new model that better reflects internal risk management activities in the financial statements. Changes have been made in a number of areas with respect to IAS 39, such as hedged items, hedging financial instruments, accounting for the time value of options and effectiveness measurement. However, the greatest improvements refer to the possibility of hedging non-financial risks, and therefore they will be particularly applicable to non-financial institutions.

At the end of 2014, the group began preparatory work for the implementation of this standard. This project covers three years (2015, 2016 and 2017) and is cross-cutting, as it will have an impact on the Group's processes and systems, and on the financial reporting governance and controls. This project is headed by a specific committee which is responsible, and has been from its inception, for coordinating the different Group departments involved and for ensuring that the implementation objectives which have been set are achieved on time.

The approach followed by the entity to take on new classification criteria for the purpose of presenting information related to financial instruments has consisted in establishing a process for the assessment of characteristics of financial assets which will determine their classification into one of the portfolios set forth in the standard. The results obtained after this assessment will be taken into consideration in the processes for accepting and granting new operations, when defining policies and fitting in new decisions to be taken within the entity's governance environment, and when determining changes in current accounting cycles in order to incorporate these new requirements.

With regard to the focus of the project on the new estimated impairment loss model, the entity has worked on adapting the triggers or indicators to classify its financial instruments into one of the three portfolios defined in the standard, and their implementation into the systems: the development of individual and collective analysis tools, together with their corresponding accounting processes and the definition of information flows between divisions and the assignment of responsibilities according to the functions established; the incorporation of forward looking information in the calculation of expected loss; the update of internal and

external reporting based on the changes in IFRS 9, the analysis and development of the project for its implementation in the Group's subsidiaries; the documentation process of the criteria used for the adoption of the standard and the amendment of accounting policies; the adaptation of information flows to the governing bodies on aspects relating to implementation and review, and the approval and decision making process. In this regard, the Group will maintain its approval processes for internal models, although the Group is reviewing them to ensure their compliance with the new requirements. Furthermore, a plan is being developed to amend and adapt the systems, which includes the relationship between the requirements set forth in the standard and the relationship on system tests and users to be carried out. These models will be subject to review by the Group's internal control functions.

The Group does not expect significant changes for the purposes of classifying operations on the balance sheet arising from the use of the business model under which its financial assets are managed, given that the majority of cash flows that these represent, are only principal and interest payments, for which reason they are valued at amortised cost, which is the principal criteria by which the Group's financial assets are currently valued, as they are mainly loans and receivables.

The most relevant impacts will arise as a consequence of the establishment of criteria to determine the operations for which a significant increase in credit risk has occurred since its initial recognition, and from the application of an expected lifetime loss model for these operations. For these purposes, as indicated above, the Group is in the process of adapting the triggers or indicators of an increase in risk, which together with the use of internal models based on credit ratings, aligned with the Group's risk management, shall be used to determine the classification of each financial asset into one of the three portfolios mentioned earlier. On the other hand, the Group will use its credit ratings models as a basis for the application of the expected lifetime loss model. The Group's credit rating models are already used for regulatory purposes, incorporating the necessary changes to their calibration in order to comply with the new accounting standard.

Additionally, the Group has scenario forecasting models, which shall be used to include forward looking information, both for the purpose of determining whether there is a significant increase in credit risks exists, as well as for estimating total expected loss for assets.

Furthermore, significant impacts on hedge accounting as a consequence of the entry into force of this standard are not expected.

In 2017 the Group shall establish a process in which impairment losses incurred from the application of current accounting regulations (IAS 39), shall be calculated simultaneously with those losses that would be incurred from the application of IFRS 9 (parallel run), with the objective of ensuring the correct implementation of the latter. Furthermore, the Group will develop procedures to redraft the information corresponding to credit risk impairment in 2017 in accordance with IFRS 9 criteria, with the objective of presenting this information for comparison purposes against information corresponding to 2018, which shall be prepared in accordance with the accounting criteria of the new standard, both in the consolidated annual accounts as well as in the rest of the interim financial information of such year which requires comparable information from the previous year to be presented.

The Group considers that the incorporation of IFRS 9 does not entail a significant change in its tools and methodologies for the management and monitoring of impairment losses on financial assets, although it does imply a necessity to carry out an assessment, through which the new changes in this standard should be incorporated into the processes and systems already established by the Group.

The project for the adoption of IFRS 9 is being developed in accordance with the plan and in line with expected implementation dates. As indicated above, the Group is currently assessing different existing alternatives for the practical application of some of the new requirements established by IFRS 9, and, as a consequence, its estimated impact will vary depending on the decisions which are finally adopted. Due to the foregoing, at the date of formulating these consolidated annual accounts, the Group still does not have a sufficiently precise estimation of the impact that the initial application of this standard will have on consolidated financial statements.

#### IFRS 15 "Revenue from contracts with customers"

IFRS 15 lays down new income recognition requirements based on the principle that an institution should recognise revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the company expects to be entitled in exchange for those goods or services.

This principle is reflected in a model for revenue recognition comprising five steps, in which institutions must identify the separate performance obligations in contracts with customers, allocate the transaction price to the performance obligations identified and recognise revenue when, or as, the institution satisfies the performance obligation. This standard is therefore expected to have a greater impact on companies selling

products and services on a combined basis or those that take part in long term projects, such as telecommunications, software, engineering, construction and property companies.

In view of the Group's core activities and the fact that the standard is not applicable to financial instruments and other contractual rights and obligations under the scope of IAS 39 (IFRS 9, once it comes into effect), the Group does not expect any significant impact from the future application of this standard.

#### Not approved for application in the EU

#### IFRS 16 "Leases"

In January 2016, IASB published a new standard on leases, which supersedes IAS 17 "Leases", and establishes new criteria for the identification and accounting of leasing contracts, for both lessors as well as lessees.

IFRS 16 establishes a control model for the identification of these contracts, distinguishing between lease and service contracts based on the existence of a specified asset controlled by the lessee.

This standard includes significant changes in the accounting of lessees, eliminating the classification between finance leases and operating leases. The standard requires right-of-use assets and lease liabilities to be recognised on the balance sheet, with the exception of short term leases or leases of low value assets. This standard does not introduce significant amendments in the accounting of these contracts by lessors.

The standard has a mandatory effective date of 1 January 2019. Institutions can opt to apply it in advance, but only if it is applied at the same time as IFRS 15 "Revenue from contracts with customers".

Due to the volume of current, operational lease contracts in which consolidated entities act as lessees, the Group does not expect significant equity effects on the consolidated financial statements from the future application of this standard.

#### Amendments to IAS 12 "Recognition of deferred tax assets for unrealised losses"

On 19 January 2016, the IASB published the following amendments to IAS 12 - "Income Taxes", which is the standard containing the requirements to measure deferred tax assets and liabilities. The amendments clarify when a deferred tax asset should be recognised for unrealised losses related to debt instruments measured at fair value.

The application of this Standard shall be mandatory from 1 January 2017, although institutions can opt to apply it in advance.

#### Amendments to IAS 7 "Disclosure Initiative"

These amendments introduce additional disclosure requirements to already existing requirements, with the aim of clarifying information provided to the users of financial statements about an entity's financing activities. In particular, they require entities to provide disclosures of information that enables users of financial statements to evaluate changes in liabilities arising from financing activities. Although a pre-determined format is not required, it is specified that the presentation of the reconciliation of liabilities at the beginning and end of the year together with cash flows for financing activities is a method of complying with these obligations.

#### Clarifications regarding IFRS 15 "Revenue from contracts with customers"

These clarifications address the identification of performance obligations, principal versus agent considerations and licensing, as well as some information regarding transition rules.

#### Amendments to IFRS 2 "Classification and measurement of share-based payment transactions"

These amendments address specific issues such as the accounting of cash-settled share-based payment transactions that include a performance condition, the classification of share-based payments settled net of tax withholdings and some aspects of the accounting of the amendments to the terms and conditions of share-based payments.

#### Amendments to IFRS 4 "Applying IFRS 9 "Financial Instruments" with IFRS 4 "Insurance Contracts"

The objective of these amendments is to address the concerns of some entities, particularly insurance entities, regarding the different effective dates of the first application of IFRS 9 and the new standard on insurance contracts, which has not yet been approved. These concerns relate to the possibility of accounting mismatches and volatility in results if IFRS 9 is applied before the new standard on insurance contracts, as well as on the difficulties and costs of implementing both standards.

Therefore, in accordance with IFRS 4, entities who issue Insurance contracts may choose from the following two options:

- Reclassification of gains included in profit or loss for the year to total equity, except for income and expenses deriving from financial assets measured at fair value.
- Temporarily not applying IFRS 9, in the case of entities whose activity predominantly consists of issuing insurance contracts within the scope of IFRS 4.

#### Annual Improvements to IFRS "Cycle 2014-2016"

These improvements include non-urgent amendments to IFRS 1 "First-time Adoption of International Financial Reporting Standards"; IFRS 12 "Disclosure of Interests in Other Entities"; and IAS 28 "Investments in Associates and Joint Ventures."

#### Amendments to IAS 40 "Investment property transfers"

According to these amendments, it is only possible to record one asset as a real estate investment, or reclassify it to a different item on the balance sheet, when there is evidence that a change in its use has occurred. In particular, in accordance with these amendments, a change in the intended use of the asset does not constitute, in itself, evidence of a change in the use of the asset.

#### Interpretation of IFRIC 22 "Foreign currency transactions and advance consideration"

This interpretation refers to the treatment of transactions in a foreign currency, when an entity recognises a monetary or non-monetary liability arising from the payment or receipt of advance consideration before the entity recognises the related asset, expense or income associated with it.

In these cases, the exchange rate to be used is the date of initial recognition of the payment or receipt of advance consideration.

#### Accounting estimates made

The preparation of the consolidated annual accounts requires certain estimates to be made. It also requires that Management exercise judgement in the process of applying the Group's accounting policies. Such estimates could affect the amount of assets and liabilities and breakdown of contingent assets and liabilities at the date of the consolidated annual accounts, as well as income and expenses during the year.

The main estimates refer to the following concepts:

- Losses due to the impairment of certain financial assets (see Notes 1.3.4, 7, 8, 9, and 11).
- The assumptions used in the actuarial calculation of the liabilities and the commitments in respect of post-employment remuneration, as well as those used in the calculation of the liabilities of insurance contracts (see Notes 1.3.16, 1.3.18, 23 and 24).
- The useful life of tangible and intangible assets (see Notes 1.3.10, 1.3.12, 16 and 17).
- The valuation of consolidated goodwill (see Notes 1.3.12 and 17).
- The provisions and consideration of contingent liabilities (see Notes 1.3.17 and 24).
- The fair value of certain unquoted financial assets (see Note 6).
- The fair value of real estate assets included in the balance sheet (see Notes 1.3.9, 1.3.10, 13.13 and Note 6).

Although estimates are based on the best information available to Management about the present and foreseeable circumstances, final outcomes may be at variance with these estimates.

#### 1.3. Accounting principles and policies and measurement criteria

The most significant principles, accounting standards and measurement criteria that have been applied in preparing these consolidated annual accounts are as follows:

#### 1.3.1 Consolidation principles

In the consolidation process a distinction is drawn between subsidiaries, joint ventures, associates and structured entities.

#### <u>Subsidiaries</u>

Subsidiaries are institutions over which the Group has control. This occurs when the Group is exposed to or is entitled to variable returns derived from its involvement in the subsidiary and it has the ability to influence those returns through its power over the subsidiary.

For control to exist, the following criteria must be met:

- Power: An investor has power over an investee when it holds rights which provide it with the capacity to direct the relevant activities, i.e. those that significantly affect the investee's results.
- Results: An investor is exposed, or has rights, to variable returns from its involvement in the investee when the returns it obtains from such involvement may vary depending on the investee's business performance. The returns may be only positive, only negative or both positive and negative.
- Relationship between power and results: An investor controls an investee if the investor not only has power over the investee and is exposed or has rights, to variable returns due to its involvement with the investee, but also the ability to use its power to affect the returns from its involvement with the investee.

At the time of the takeover a subsidiary, the Group applies the acquisition method provided for in the regulatory framework (see Note 1.3.2) except in the case of acquisitions of an asset or group of assets.

The subsidiaries' financial statements are consolidated with the bank's financial statements using the full consolidation method.

Third parties' interests in the Group's consolidated equity are disclosed in the consolidated balance sheet under the heading "*Minority interests (non-controlling interests)*", and the portion of the profit or loss for the year attributable to such interests is reflected in the consolidated income statement under "*Gains/(losses) attributable to non-controlling interests*".

#### <u>Joint ventures</u>

These are institutions covered by joint control agreements whereby decisions on the relevant activities are made unanimously by the institutions which share control.

Interests in joint ventures are accounted for by the equity method i.e. they are accounted for in terms of the fraction of equity represented by the Group's holding of their share capital, after taking account of any dividends received from them and any other equity disposals.

The Group has not held investments in joint ventures during 2016.

#### <u>Associates</u>

Associates are institutions over which the Group has a significant influence which generally, but not exclusively, takes the form of direct or indirect interest representing 20% or more of the investee's voting rights.

In the consolidated annual accounts associates are accounted for using the equity method.

#### Structured entities

A structured entity is an entity that has been designed so that voting or other similar rights are not the determining factor when it comes to deciding who controls the entity.

In cases in which the Group holds a stake in an entity, or constitutes an entity, for the purpose of transferring risks or for any other purposes, or to allow customers access to certain investments, whether or not there is control over the entity is determined based on the provisions of the regulatory framework, as described above and, subsequently, a determination is made as to whether or not they should be subject to consolidation. Specifically, the following factors, among others, are considered:

- Analysis of the influence of the Group over the relevant activities of the entity that could have an influence on the amount of its returns.
- Implicit or explicit commitments of the Group to provide financial support to the entity.
- Identification of the entity manager and analysis of the system of returns.
- Existence of exclusion rights (possibility of dismissing managers).
- Significant exposure of the Group to the variable returns on the assets of the entity.

These entities include those known as "Asset securitisation funds", which are consolidated in cases where, based on the above analysis, it is determined that the Group has maintained control. For these operations, there are contractual agreements for financial aid commonly used in securitisation markets, but there are no significant financial aid agreements other than those established contractually. By reason of the foregoing, it is considered that for virtually all securitisations made by the Group, the risks transferred cannot be derecognised from the consolidated balance sheet assets, and the issues of securitisation funds are recorded as liabilities on the Group for unconsolidated balance sheet. At 31 December 2016, there was no significant financial aid from the Group for unconsolidated securitisations.

In the case of investment firms and funds and pensions managed by the Group (in most cases, retail funds with no status as a legal entity over which the investors acquire proportional units providing them with ownership of the equity managed), they are considered not to meet the requirements of the regulatory framework for them to be considered structured entities, while they are analysed under the same criteria as subsidiaries.

Such firms and funds are self-sufficient in terms of their activities, and their capital structure does not prevent them from carrying out their activities without further financial aid, therefore they are not consolidated.

Schedule II provides the details of the structured entities of the Group.

In all cases, the consolidation of the results obtained by the companies forming part of the Group during a given year is carried out considering only those relating to the period spanning between the acquisition date and year-end. Additionally, the consolidation of the results generated by the companies sold during the year is accomplished considering only those relating to the period spanning between the beginning of the year and the date of sale.

In the consolidation process, all material balances and transactions between the companies forming part of the Group have been eliminated, in the proportion corresponding to them based on the applied consolidation method.

The financial and insurance entities of the Group, both subsidiaries and associates, regardless of the country in which they are located, are subject to supervision and regulation by various bodies. Current laws in the various jurisdictions, along with the need to meet certain minimum capital requirements and carry out oversight activities, are circumstances that could affect the capacity of such institutions to transfer funds in the form of cash, dividends, loans or advances.

Note 2 includes information on the most significant acquisitions and sales that have taken place during the year. Relevant information regarding the Group's companies is provided in Schedule I.

#### 1.3.2 Business combinations

A business combination is a transaction, or any other event, whereby the Group obtains control over one or more businesses. Business combinations are accounted for using the acquisition method.

Under this method, the acquiring entity recognises the assets and liabilities acquired in its financial statements, also considering contingent liabilities, in line with their fair value, including those which were not recognised for accounting purposes by the acquired entity. This method also requires the estimate of the cost of the business combination, which will normally correspond to the consideration paid, defined as the fair value, on the date of acquisition, the assets delivered, the liabilities incurred against the former owners of the acquired business and the equity instruments issued, if any, by the acquiring entity.

The Group recognises goodwill in the consolidated annual accounts if at the acquisition date there is a positive difference between:

- the sum of the consideration paid and the amount of all minority interests and the fair value of prior shareholdings in the business acquired; and
- the fair value of the financial assets and liabilities recognised.

If the difference is negative, it is recorded under the heading "*Negative goodwill recognised in profit and loss*" on the consolidated income statement.

In cases where the amount of the consideration depends on future events, any contingent consideration is recognised as part of the consideration paid and is measured at fair value on the acquisition date. The costs associated with the transaction do not form part of the cost of the business combination for these purposes.

If the cost of the business combination at fair value assigned to the acquired entity's assets, liabilities or contingent liabilities cannot be definitively determined, the initial accounting of the business combination is considered provisional. In any event, the process should be completed within a maximum of one year from the acquisition date and takes effect on that date.

Minority interests in the acquired entity are measured on the basis of the proportional percentage of its identified net assets. All purchases and disposals of these minority interests are accounted for as equity transactions when they do not result in a change of control. No profit or loss is recognised in the consolidated income statement and the initially recognised goodwill is not remeasured. Any difference between the consideration paid or received and the decrease or increase in minority interests, respectively, is recognised in reserves.

With regard to non-monetary contributions of business to associates or jointly controlled institutions in which control is lost over said businesses, the Group's accounting policy is to record the full profit or loss on the consolidated income statement, recognising any remaining interest at fair value (if any).

## 1.3.3 Measurement of financial instruments and recognition of changes arising in their subsequent measurement

In general all financial instruments are initially recorded at fair value (see definition in Note 6) which, unless evidence to the contrary is available, coincides with the transaction price. In general, conventional sales and purchases of financial assets are recognised in the Group's consolidated balance sheet using the settlement date.

Changes in value of financial instruments originating from the accrual of interest and similar items are recorded under Interest on the consolidated income statement, under the headings "*Interest income*" or "*Interest expenses*", as applicable, with the exception of derivatives (see Note 1.3.5). Dividends received from other companies are recognised on the consolidated income statement for the year in which the right to receive them is originated.

Changes in valuations arising after initial recognition due to reasons other than those mentioned in the preceding paragraph are accounted for on the basis of the classification of financial assets and liabilities:

#### Financial assets and liabilities held for trading

Financial assets and liabilities held for trading include financial assets and liabilities which have been acquired or issued to be sold or repurchased in the short term, or which form part of a portfolio of financial instruments that are identified and managed together and in which there has been recent action to achieve short-term profits. Short positions in securities arising from sales of assets and liabilities acquired under non-optional repurchase agreements or loans of securities, as well as derivative instruments that do not comply with the definition of a financial guarantee contract and have not been designated as hedging instruments for accounting purposes are also considered to be financial assets held for trading.

Derivatives embedded in other financial instruments or other primary contracts are recorded separately as derivatives where the risk and other characteristics of the derivative are not closely related to those of the primary contract and the primary contracts are not classified as "Financial assets held for trading" or as "Financial assets and liabilities designated at fair value through profit or loss" or "Financial liabilities held for trading".

Changes in fair value of these instruments are recorded on the consolidated income statement.

#### Financial assets and liabilities designated at fair value through profit or loss

This category includes financial instruments that, designated on initial recognition, are regarded as hybrid financial instruments, they do not form part of financial instruments held for trading, and are measured entirely on a fair value basis. It also includes financial assets which are managed together with liabilities under insurance contracts measured at fair value or which are managed in combination with financial liabilities and derivatives for the purpose of significantly reducing overall exposure to interest rate risk.

Changes in fair value of these instruments are recorded on the consolidated income statement.

#### Available-for-sale financial assets

This category includes debt securities and equity instruments which are not shareholdings in subsidiaries, associates or joint ventures and which have not been classified under any other category.

Changes in the fair value of these assets are temporarily recorded, net of taxes, under the heading "*Accumulated other comprehensive income*" in consolidated equity, unless they are due to foreign exchange differences arising on monetary financial assets that are recognised in the consolidated income statement.

Amounts recorded under the heading "*Accumulated other comprehensive income*" continue to be included in consolidated equity until the asset from which they have originated is derecognised on the consolidated balance sheet, at which point they are written off against the consolidated income statement, or until an impairment in the value of the financial instrument is determined.

#### Loans and receivables

This category includes financial assets which, while not traded in an active market or needing to be recognised as at fair value, generate cash flows of a fixed or determinable amount in which the Group's disbursement will be recovered in full, except for reasons related to the borrower's solvency. This category comprises investments associated with the Group's normal lending activities and includes amounts loaned to

customers and not yet repaid; deposits placed with other institutions, regardless of the legal arrangements under which the funds were provided; unquoted debt securities; and any debts incurred by purchasers of goods or services forming part of the Group's business.

Upon initial recognition, they are recorded at fair value, incorporating all costs directly related to the transaction.

Following initial recognition they are stated at amortised cost, which consists of the acquisition cost adjusted for principal repayments and the portion allocated in the consolidated income statement using the effective interest rate method of the difference between the initial cost and the repayment value at maturity. In addition, the amortised cost is decreased by any reduction in value due to impairment recognised directly as a decrease in the value of the asset or through an allowance or compensatory item.

The effective interest rate is the discount rate that equals the value of a financial instrument exactly to the estimated cash flows over the instrument's expected life, on the basis of the contractual conditions, such as early repayment options, but without taking into account future credit risk losses. For fixed rate financial instruments, the effective interest rate coincides with the contractual interest rate set at the time of their acquisition, plus, where appropriate, the fees which, because of their nature, may be likened to an interest rate. In the case of a variable-rate instrument the effective interest rate is the same as the rate of return in respect of interest and fees on the instrument, until the first date on which the base rate is reviewed.

Interest accrued calculated using the effective interest rate method is recorded under "*Interest similar income*" on the consolidated income statement.

#### Investments held until maturity

This category includes debt securities which have a specific maturity date, and lead to payments on preestablished dates for fixed or pre-determined amounts, with a proven capacity and intention for holding these securities to maturity.

The valuation criterion for investments held to maturity are the same as the criteria for loans and receivables.

#### Financial liabilities at amortised cost

This category comprises those financial liabilities that cannot be classified under any other consolidated balance sheet heading and are associated with the normal deposit-taking activity of a financial institution, irrespective of the term or the arrangement involved.

In particular, this category includes capital having the nature of a financial liability. This item corresponds to the amount of financial instruments issued by the Group which, although they are treated as capital for legal purposes, do not qualify for classification as consolidated equity for accounting purposes. They consist mainly of issued shares that do not carry voting rights on which a dividend is paid based on a fixed or variable rate of interest.

Following initial recognition they are valued at amortised cost, applying similar criteria to loans and receivables and investments held to maturity. Interest accrued calculated using the effective interest rate method is recorded under the heading "*Interest expenses*" on the consolidated income statement. However, if the Group has discretional powers with regards to the payment of coupons associated with the financial instruments issued and reclassified as financial liabilities, the Group's accounting policy consists of recognising them by charging them to reserves.

The fair value of the Group's financial instruments at 31 December 2016 and 2015 is included in Note 6.

#### 1.3.4 Impairment of financial assets

A financial asset is deemed to be impaired, and therefore its carrying value is adjusted to reflect the effect of such impairment, when there is objective evidence that an event, or the combined effect of various events, has occurred which gives rise to:

- For debt instruments, including loans and debt securities, a negative impact on future cash flows estimated at the time the transaction was entered into.
- For equity instruments, a situation in which their carrying values will not be recovered.

As a general rule, the carrying amount of impaired financial assets is adjusted with a charge to the consolidated income statement for the period in which the impairment becomes known. The recoveries of previously recognised impairment losses are reflected, if appropriate, in the consolidated income statement for the year in which the impairment is reversed or reduced. However, the recovery of previously recorded impairment losses relating to equity instruments classified as available-for-sale financial assets is recognised under the heading "*Accumulated other comprehensive income*" in consolidated equity.

The calculation of the impairment on financial assets is determined by the type of instrument and other circumstances that could affect it, taking into account the guarantees received. The Group recognises both allowances, when bad-debt provisions are recorded to cover estimated losses, and direct write-downs against the asset concerned when recovery is deemed to be remote.

In general terms, the recognition of the accrual of interest in the consolidated income statement based on contractual terms is discontinued for all debt instruments classified as impaired. If such interests are subsequently recovered, the amount received is recognised on the consolidated income statement.

#### Debt instruments measured at amortised cost

To determine impairment losses, the Group monitors borrowers individually, at least those who are significant borrowers, and collectively, for groups of financial assets with similar risk characteristics that indicate the capacity of borrowers to satisfy their outstanding payments. When a specific instrument cannot be included in any group of assets with similar risk characteristics, it is analysed on a solely individual basis to determine whether it is impaired and, if so, to estimate the losses due to impairment.

The Group has policies, methods and procedures in place to estimate losses that may arise as a result of its credit risks, both due to insolvency attributed to counterparties and due to country risk. These policies, methods and procedures are applied when granting, assessing and formalising off-balance sheet debt instruments and exposures, and when identifying their possible impairment and, where applicable, when calculating the necessary amounts to cover such estimated losses.

#### Accounting classification based on credit risk attributable to insolvency.

The Group has established criteria which allows it to identify borrowers who show signs of weakness or objective evidence of impairment, and classify them based on their credit risk.

The following sections lay out the classification principles and methodologies used by the Group.

#### Definition of the classification categories

Debt instruments not included in the portfolio of financial assets held for trading, as well as off-balance sheet exposures, are classified in terms of credit risk attributable to insolvency into:

- Standard exposures:
  - Operations which do not meet the requirements to be classified into other categories.
  - Standard exposure subject to special monitoring: this includes all transactions that, while not meeting the criteria for individual classification as doubtful or write off, present weaknesses that may lead to the incurrence of losses exceeding those on other similar transactions classified as standard exposures.
- Doubtful risk:
  - As a result of borrower arrears: transactions, any part of whose principal, interest or contractually agreed expenses is more than 90 days past due, even if taking into consideration the particular characteristics of the markets in which foreign subsidiaries operate, unless they should be classified as being written off. This category also include guarantees given if the guaranteed party has fallen into arrears in the guaranteed transactions. Furthermore, this category also includes the amounts of all a borrower's transactions if the transactions with amounts more than 90 days past due, as indicated earlier, exceed 20% of the amounts outstanding.
  - For reasons other than borrower arrears: transactions which are not classifiable as write-off or doubtful due to borrower arrears, but for which there are reasonable doubts about their full repayment under the contractual terms; as well as off-balance sheet exposures not classified as doubtful due to borrower arrears, whose payment by the Group is likely, but whose recovery is doubtful.

• Write-off risk:

The Group derecognises from the consolidated balance sheet transactions whose recovery is considered very unlikely after an individual assessment. This category includes risks of customers who are in bankruptcy proceedings filing for liquidation, and transactions classified as doubtful due to arrears with payments over four years past-due, except balances that have sufficient efficient guarantees. It also includes transactions which, despite not being in any of the two previous situations, are undergoing a manifest and irreversible deterioration of their solvency.

In the past, the Group has derecognised from the consolidated balance sheet any amount recorded together with its provision, without prejudice to any actions that may be taken to collect payment, until no more rights to collect payment exist, whether due to prescription, discharged loans or any other reasons.

#### Classification criteria for transactions

The Group applies diverse criteria to classify borrowers and operations into different categories based on their credit risk. These categories include:

- Automatic criteria;
- Specific criteria for refinancing; and;
- Criteria based on indicators.

The automatic factors and specific criteria for refinancing constitute the classification and cure algorithm, and are applied to the entire portfolio.

Furthermore, and with the objective of the early identification of the weaknesses and impairment of the transactions, the Group establishes indicators or triggers, distinguishing between significant and non-significant borrowers In particular, non-significant borrowers, who, once they have passed the automatic classification algorithm, do not comply with any of the conditions to be classed as doubtful or subject to special monitoring, are evaluated through indicators, the objective of which is to identify early signs of weaknesses that could lead to the incurrence of losses exceeding those on other similar transactions classified as standard exposures. This trigger is based on the best estimate of probability of being classified as doubtful associated with each transaction (synthetic trigger).

Transactions classified as doubtful are reclassified as standard exposure when, as a consequence of the full or partial collection of defaulted amounts in the case of transactions classed as doubtful due to arrears, or for having exceeded the grace period for reasons other than arrears, the reasons for which they were classified as doubtful no longer exist, unless other reasons make it advisable to keep them in this category.

As a result of these procedures, the group classifies its borrowers into the categories of standard exposure; subject to special monitoring or doubtful due to borrower arrears, or maintains them in the category of standard exposure.

#### Individual risk

The Group has established a threshold in terms of exposure to classify borrowers as significant, based on the parameter exposure at default (EAD).

For significant borrowers, an indicator system is established which enables weaknesses or early signs of impairment to be detected An expert team of risk analysts analyses the borrowers, using the indicators to determine whether there is weakness or objective evidence of impairment, and in the event of finding evidence of impairment, will determine whether this event, or events causing the loss, will impact the estimated future cash flows of the financial asset or its group.

The indicators system for significant borrowers is automated, and includes particularities of behaviour segments differentiated from the loan book. The items which the indicators system aims to identify are listed below:

• Significant financial difficulties by the issuer or the obligor: these difficulties are indicative of an impairment event to the extent that, due to their significance, they limit the issuer or obligor's capacity to fulfil their financial obligations.

In this regard, to identify an impairment, it is necessary to consider the variables indicative of a negative economic-financial situation, as well as variables which could be potential causes of, or lead to, this negative economic-financial situation.

- Non-compliance with contractual clauses, default or delays in the payment of interests: in addition to defaults more than 90 days past due, which form part of the automatic classification algorithm, by which defaults or delays less than 90 days past due are identified, which could be a sign of impairment.
- Due to financial difficulties, concessions or advantages are granted to the borrower, which would not be granted otherwise. Granting refinancing to a debtor in difficulties could prevent or delay the non-compliance with their obligations, and at the same time, the recognition of the impairment related to the financial assets associated with the debtor.
- The probability of the borrower becoming subject to bankruptcy proceedings: in those cases in which there is a strong probability of the borrower entering into bankruptcy or restructuring, the liquidity of the issuers or obligors becoming considerably affected, possibly leading to a loss event based on the impact on estimated future cash flows.
- The disappearance of an active market for that financial asset due to financial difficulties: the suspension of financial assets issued by the obligor or issuer could imply a complicated economic-financial situation, and therefore, a reduced capacity to fulfil their obligations.

The Group carries out an annual review of the reasonableness of the thresholds and the individual analysis coverage achieved through their application.

The levels defined include a volume of borrowers which permits reasonable coverage of the total credit exposure, set above the materiality threshold, which are therefore subject to individual expert analysis.

#### Collective risk

For borrowers who have not surpassed the threshold set by the bank and have also not been classified as doubtful or subject to special monitoring by the automatic classification algorithm, the Group has defined a synthetic indicator through which it identifies those exposures which show weaknesses that could lead to incurring losses higher than losses in other similar operations classified as standard exposure. In this regard, the Group has established thresholds which, once exceeded, imply the automatic classification of standard exposure subject to special monitoring due to the associated weaknesses.

#### Refinancing and restructuring operations

Credit risk management policies and procedures applied by the Group guarantee a detailed monitoring of borrowers, and demonstrate the need to make provisions when there is evidence of impairment to their solvency (see Note 4). For this purpose, the Group constitutes the insolvency provisions for transactions in which the borrower's circumstances requires them, prior to formalising the restructuring/refinancing operations, which should be understood as follows:

- Refinancing transaction: this is granted or used for economic or legal reasons associated with current or foreseeable financial difficulties of the holder to cancel one or more operations granted by the Group, or by which outstanding payments for such operations are met in full or in part, for the purpose of enabling holders to pay their debt (principal and interest) because they are unable, or will predictably soon be unable, to fulfil their payment obligations in due time and proper form.
- Restructuring transaction: the financial terms and conditions of an operation are amended for economic or legal reasons associated with current or foreseeable financial difficulties of the holder in order to facilitate payment of the debt (principal and interest) because the borrower is, or will, foreseeably become unable to comply with those terms and conditions on time and in due form, even if that change was envisaged in the contract. In any event, transactions are considered to be

restructured when a debt reduction takes place, assets are received to reduce the debt or their terms and conditions are changed to extend their maturity, change the repayment table to reduce instalments in the short term or reduce their frequency, or establish or extend the principal repayment and/or interest grace period, except when it can be demonstrated that the terms and conditions were changed for reasons other than the borrowers' financial difficulties and are similar to those terms that would be applied by other entities in the market for similar risks.

The formalisation of amendments to contractual terms and conditions does not entail any significant additional deterioration to the borrowers' circumstances that will require the creation of additional provisions.

If a transaction is classified within a specific risk category, the refinancing transaction does not entail any automatic improvement in its risk assessment. For refinancing operations, the algorithm establishes its initial classification based on the characteristics of the operations, mainly that the borrower encounters financial difficulties, the fulfilment of certain clauses as well as long grace periods. Subsequently, the algorithm modifies the initial classification based on the fixed cure periods. A reclassification into a lower risk category shall only be considered if there is a quantitative or qualitative increase in efficient guarantees that back the transaction and if there is an evident significant improvement in the continuous recovery of the debt over time, therefore the act of refinancing does not in itself produce any immediate improvements.

With regards to refinanced/restructured loans classified as standard, different types of transactions are specifically assessed to reclassify them, if applicable, into a higher risk category using the same categories described in the previous section (i.e. assets considered doubtful due to counterparty arrears, when payments are, in general, over 90 days past-due, or for reasons other than arrears, when there are reasonable doubts concerning their recoverability).

Estimates of losses due to credit impairment that are consistent with the accounting classification of the risk are provisioned for as soon as they are identified.

The methodology used to estimate losses for these portfolios is generally similar to the other financial assets measured at amortised cost, but it is considered that, as a rule, a transaction that has had to be restructured in order to meet payment obligations should have a higher loss estimate than a transaction that has never suffered default (unless there are sufficient additional effective guarantees to justify otherwise).

After the initial rating of the transaction, the change to a lower risk category must be supported by significant evidence of improvement in the expected recovery of the transaction, either because the borrower has been consistently meeting their payment obligations over a prolonged period of time or because the initial debt has been significantly repaid. Nevertheless, that transaction shall continue to be identified as a restructuring or refinancing operation.

#### Hedging operations

The Group applies the criteria described below to calculate allowances and provisions for credit risk losses.

With regard to the transactions identified without negligible risk (fundamentally, transactions with central banks, general governments, companies, public and financial institutions, all of whom are European Union countries, or determined countries deemed to be risk-free), they are covered by a credit risk allowance of 0%, except in the case of operations classified as doubtful, for which an individual estimation of the impairment is carried out. In the estimation process, the amount of the allowance and provisions is calculated, on the one hand, for credit risk attributable to the holder, and on the other hand, for country risk. If there are reasons for simultaneously recording allowances or provisions against a transaction for credit risk attributable to the holder and credit risk, the most demanding criteria is applied.

As an exposure metric for allowances and provisions, the Group uses current drawn down balances, and the estimation of the amounts that it expects to disburse in the case of entry into default for off-balance sheet exposures, through the application of a Credit Conversion Factor (CCF).

For transactions classified as doubtful, an estimate shall be made of the losses incurred , defined as the difference between the gross carrying amount of the exposure and the present value of the estimated future cash flows, as described further on.

The Group uses shorter time horizons in certain segments when it has evidence that the reclassification procedures ensure that loss events are detected in a shorter period.

Subsequently, these estimated cash flows are updated to the effective interest rate of the instrument (if its contractual interest rate is fixed) or to the contractual effective interest rate on the date of the update (when the interest rate is variable).

The Group's methodologies are described in the following sections.

#### Individual estimates of allowances and provisions

The following items must be estimated individually:

- Allowances and provisions for borrower transactions that are doubtful, and that the Group considers to be significant.
- Where relevant, the operations or borrowers whose characteristics prevent impairment from being calculated collectively.
- Allowances and provisions for transactions identified as being without negligible risk, classified as doubtful, whether due to arrears or for other reasons.

The Group has developed a methodology to estimate these provisions and allowances, calculating the difference between the gross carrying amount of the operation and the present value of the estimated cash flows it expects to collect, discounted using the effective interest rate. In order to do so, effective guarantees/collateral received are taken into account. In order to evaluate the recoverable amount using these guarantees, the average parameters of the collective impairment estimation model are used as a benchmark, adapting them, where relevant, to the best information available in the individual analysis.

Three methods are established for the calculation of the recoverable amount of assets evaluated on an individual basis:

- Discounted cash flow approach: for debtors whom are estimated as being capable of generating future cash flows through their own business activity, permitting, through the development of their activity and the economic-financial structure of the company, the partial or full re-payment of the debt owed. This entails the estimation of cash flows obtained by the borrower in their business activity.
- Recovery of collateral approach: debtors without capacity of generating cash flows through their own business activity, becoming forced to liquidate assets to make their debt payments. This entails the estimation of cash flows based on the execution of guarantees.
- Combined approach: debtors who are estimated to have capacity of generating future cash flows, and who, in addition, also have non-core assets. These flows could be supplemented with the potential sales of non-performing assets, insofar as they are not necessary for the development of their activity, and, as a consequence, for the generation of the aforesaid future cash flows.

#### Collective coverage estimates

The following items are subject to collective estimation:

- Exposures classified as standard exposure (including those classified as subject to special monitoring), which the Group believes have incurred a loss that has not been communicated (IBNR coverage), due to not having stated the impairment in operations considered on an individual basis.
- Exposures classed as doubtful, which are not evaluated through the individual estimation of coverage.

When carrying out the calculation of collective impairment loss, the Group, in accordance with that laid out in the Implementation Guidance IAS 39, and the guidelines issued by ESMA on IAS 39, principally takes the following aspects into consideration:

• The impairment estimation process takes into account all credit exposures, except for non-doubtful exposures without appreciable risk. For these exposures the methods established by Bank of Spain based on data and statistics models are used, which add up the average performance of the entities in the Spanish banking sector. The Group recognises an impairment loss equal to the best estimation using available internal models, taking into account all of the relevant information available to it under the existing conditions at the end of the period it is reporting on.

• With the objective of carrying out a collective assessment of the impairment, the financial assets are grouped based on the similarities of their characteristics regarding credit risk, with the aim of estimating different risk parameters for each homogeneous group. This segmentation differs for each estimated risk parameter. The segmentation takes into account the historic record of the losses observed for a homogeneous group of assets (segment), once conditioned to the current economic situation, which is representative of the non-reported losses incurred which will arise in this segment. This segmentation discriminates against risk, and it is aligned with risk management. It is used in the Group's internal models, as well as by internal control units for different purposes, and the Supervisor. Lastly, it is subjected to regular back testing and the regular update and review of estimates to incorporate all of the information available.

#### Classification and coverage of credit risk due to country risk

Country risk is the risk arising in counterparties resident in a specific country for reasons other than normal commercial risk (sovereign risk, transfer risk or risks derived from international financial activity). The Group classifies transactions conducted with third parties into different groups depending on the economic changes of countries, their political situation, the regulatory and institutional framework and the payment capacity and experience, and assigns percentages of insolvency provisions, pursuant to that set forth in current regulations.

Assets considered doubtful due to the materialisation of country risk are transactions in which the final borrowers are resident in countries experiencing long-term difficulties to meet their debt obligations, and the possibility of recovery is considered doubtful, as well as other off-balance sheet exposures whose recovery is considered remote due to circumstances attributable to the country.

The provision levels for this item are not significant in terms of the hedges for impairment established by the Group.

#### **Guarantees**

Collateral and personal guarantees are defined as those which the Group is able to show as being valid as a means of mitigating credit risk. The analysis of the effectiveness of the collateral/guarantees takes into account, amongst others, the time required to execute them, the Group's capacity to do, as well as its previous experience in doing so.

Under no circumstances shall collateral/guarantees whose effectiveness depends substantially upon the credit quality of the debtor, or of any economic group to which the debtor may belong, be admissible. In compliance with these conditions, collateral/guarantees can be defined as:

- Real estate mortgages, provided they are the first mortgage:
  - Completed buildings and parts thereof:
    - Housing.
    - Offices, commercial premises and multi-purpose industrial buildings.
    - Other buildings, such as single purpose industrial buildings and hotels.
    - Urban land and regulated building land.
    - Other real estate.
- Collateral in the form of pledged financial instruments:
  - Cash deposits.
  - Equity instruments in listed entities and debt securities issued by creditworthy issuers.
- Other types of collateral:
  - Personal property received as collateral.
  - Subsequent mortgages of properties.
- Personal guarantees, which imply the direct and joint liability of the guarantors to the client, and it is these persons or entities whose liquidity has been sufficiently proved for the purposes of guaranteeing the full amortisation of the transaction under the terms agreed.

The Group has collateral assessment criteria for assets located in Spain, aligned with current regulations. In particular, the Group applies selection and contracting criteria of appraisers that are geared towards assuring the independence of the appraisers, and the quality of the appraisals. For this purpose, all of the appraisal companies are registered in the Bank of Spain Special Registry, and the assessments are carried out in accordance with the criteria established in Ministerial Order ECO/805/2003 on rules for the appraisal of real estate and of certain rights for financial purposes.

Real estate guarantees for credit transactions and properties are appraised when they are granted or registered, the latter whether through a purchase, foreclosure or in lieu of payment, and when the asset has suffered a significant reduction in value. Additionally, minimum update criteria are applied which guarantee annual frequency in the case of impaired assets (special monitoring, doubtful, foreclosed properties or received in payment of debt), or three times a year for large debts in a standard situation without signs of latent risk. Statistical methodologies are used to update appraisals exclusively for previous assets when they have reduced exposure and risk, although a full ECO appraisal is carried out, as a minimum, on a triennial basis.

For assets which are located in the rest of the European Union the appraisal is carried out pursuant to Royal Decree 716/2009 of 24 April, and in the rest of the world, by companies and/or experts with recognised capacity and experience in the country.

#### Global comparison of provisions for credit risk and impairment real estate assets

The Group has established back testing methods between estimated losses and losses incurred.

Thanks to this comparison, the Group establishes amendments to its internal methodologies when the regular comparison, through back testing, reveals significant differences between expected losses and losses incurred.

Additionally, the methodologies, as well as the back tests, are reviewed by the Group's internal control functions.

In 2016 the Group has carried out a review of the procedures followed to calculate impairment, and it has strengthened the criteria and information used to determine individual and collective estimations of losses arising from insolvency, and of the recoverable amount of the foreclosed assets or received in payment of debt. As a result of this review, the Group has increased its provisions for these assets by approximately 378 million euros, which it has recorded with a charge to the consolidated income statement for 2016.

#### Debt instruments measured at fair value

The amount of losses due to impairment incurred in debt securities included under the heading of "*Available-for-sale financial assets*" is equal to the positive difference between their cost of acquisition, net of any amortisation of principal, and its fair value less any loss due to impairment previously recognised in the consolidated income statement.

When there is objective evidence to suggest that a decline in their fair value is due to impairment, unrealised losses recognised directly under the *"Accumulated other comprehensive income"* heading in the consolidated statement of equity are immediately recorded in the consolidated income statement. In order to determine whether there is objective evidence of value impairment in the debt instruments, the Group analyses the occurrence of potential loss causing events. In general, the Group considers the following as impairment indicators:

- (i) an increase in the probability that the issuer enters into a situation of financial reorganisation;
- (ii) the disappearance of an active market for the financial asset in question; and
- (iii) a downgrade in credit rating.

For sovereign debt instruments, the assessment of possible impairments is made by assessing changes in market share prices caused mainly by changes in risk premiums and by the continued assessment of the solvency of each of their financial statements.

If, after an impairment has been recognised, all or part of such losses are recovered, their amount is recognised in the consolidated income statement for the year in which they were recovered.

#### Equity instruments

The amount of losses due to impairment incurred in equity instruments included under the heading "Availablefor-sale financial assets" is equal to the positive difference between their cost of acquisition, net of any amortisation of principal, and its fair value less any loss due to impairment previously recognised in the consolidated income statement.

When there is objective evidence to suggest that a decline in their fair value is due to impairment, unrealised losses recognised directly under the "*Accumulated other comprehensive income*" heading in the consolidated statement of equity are immediately recorded in the consolidated income statement.

To conclude on the existence of objective evidence of an impairment in the value of equity instruments, the Group assesses whether there has been a prolonged or significant decline in the fair value of the investment to a value below its cost. In particular, the Group impairs these investments when there are such declines, which are determined separately, over a period longer than 18 months or when the fair value declines by 40% or more, taking into consideration the number of instruments held for each individual investment and their unit share price.

For unquoted equity instruments, the Group calculates a discounted cash flow valuation using directly observable market variables and/or data such as a published net asset value, or comparable data and sector multipliers of similar issuers in order to determine value adjustments. Equity instruments valued at their acquisition cost are exceptions and are not significant in terms of the Group's consolidated annual accounts. At 2016 and 2015 year-end there were no investments in unquoted equity instruments therefore their quoted market price has not been considered as a reference of their fair value.

If, after an impairment has been recognised, all or part of such losses are recovered, their amount is recognised under the heading "Accumulated other comprehensive income" in the consolidated statement of equity.

In the case of interests in associates included under the heading "Investments in joint ventures and associates", the Group estimates impairment losses for each of them by comparing the amount recoverable with the carrying value of the investments. The recorded impairment is the result of an individual assessment of the investees portfolio which are assessed based on their net asset value or based on projections of their results, grouping them into activity sectors (real estate, renewable energy, industrial, financial, etc.) and evaluating the macroeconomic factors specific to that sector that could affect the performance of such companies, in order to estimate their value in use.

Specifically, insurance undertakings are assessed by applying the market consistent embedded value methodology, companies related to real estate are assessed based on their net asset value, and financial investees based on multiples of their book value and/or the profit from other comparable listed companies. Losses due to impairment are recorded in the consolidated income statement for the year in which they took place and subsequent recoveries are recognised in the consolidated income statement for the year in which they were recovered.

#### 1.3.5 Hedging operations

The Group uses financial derivatives to: (i) supply them to customers when they so require; (ii) to manage risks associated with the Group's own exposures (hedging derivatives); or (iii) to realise gains as a result of price movements. The Group uses both derivatives traded in organised markets and those traded bilaterally with counterparties in the over-the-counter (OTC) market.

Financial derivatives that do not qualify for designation as hedging instruments are classified as derivatives held for trading. To be designated as a hedging instrument, a financial derivative must satisfy the following conditions:

- It must cover exposure to changes in the values of assets and liabilities caused by interest rate and/or exchange rate movements (fair value hedge); exposure to changes in the estimated cash flows from financial assets and liabilities and from commitments and highly probable forecast transactions (cash flow hedge), or the exposure associated with net investments in foreign operations (hedge of net investments in foreign operations).
- The derivative must effectively eliminate a risk that is inherent in the hedged item or position over the expected term of the hedge, in terms of both prospective and retrospective efficiency. To this end, the Group analyses whether, at the time the hedge is arranged, it is expected in ordinary conditions to

operate with a high degree of effectiveness and verifies over the life of the hedge, using effectiveness tests, that the results of the hedge vary in the range of 80% to 125% with respect to the result of the item covered.

• Suitable documentation must be available to show that the financial derivative has been entered into specifically to provide a hedge for certain balances or transactions, and to show how effective coverage is to be achieved and measured, provided that this is consistent with the Group's risk management.

Hedges may be associated with individual items or balances (micro-hedges) or with portfolios of financial assets and liabilities (macro-hedges). In the latter case, all financial assets and liabilities being collectively hedged involve the same types of risk; this requirement is considered to be satisfied when the interest rate sensitivities of the individual hedged items are similar.

Subsequent changes to the designation of the hedge, in the measurement of the financial instruments designated as hedged items and in the financial instruments designated as hedging instruments are recorded as follows:

• In fair value hedges, differences arising in the fair value of the derivative and the hedged item attributable to the risk being hedged are recognised directly in the consolidated income statement; the balancing entries consist of the consolidated balance sheet headings in which the hedged item is recorded or under the "*Hedging derivatives*" heading, as appropriate.

In fair value hedges of interest rate risk in a portfolio of financial instruments, gains or losses arising when the hedging instrument is measured are recognised directly in the consolidated income statement while losses and gains arising from changes in the fair value of the hedged item attributable to the risk hedged are recognised in the consolidated income statement under the heading *"Adjustments to the fair value of hedged items in a portfolio with interest rate risk hedge"* under assets or liabilities in the consolidated balance sheet, as applicable. In this case, effectiveness is assessed by comparing the overall net amount of assets and liabilities in each time period with the hedged amount designated for each one of them, and the ineffective part is immediately recorded in the consolidated income statement.

- In cash flow hedging, measurement differences in the effective portion of hedging instruments are recorded under the "Accumulated other comprehensive income hedging derivatives" heading. "Cash flow hedges (effective portion)" of consolidated net equity. These differences are recognised in the consolidated income statement when the gains or losses of the hedged item are recognised, when the envisaged transactions are performed or on the date of maturity of the hedged item.
- In hedges of net investments in foreign operations, measurement differences in the effective portion of hedging instruments are recorded temporarily in the consolidated statement of equity under "Accumulated other comprehensive income Hedges of net investments in foreign operations (effective portion)". These differences are recognised on the consolidated income statement when the investment in a foreign operation is disposed of or derecognised from the consolidated balance sheet.
- Measurement differences in hedging instruments relating to the ineffective portion of cash flow hedging instruments and net investments in foreign operations are recognised in the consolidated income statement under the heading "*Net trading income (net)*".

If a derivative which is treated as a hedging derivative does not meet the above requirements due to its termination, ineffectiveness, or for any other reason, it will be treated as a derivative held for trading for accounting purposes.

When a fair value hedge is discontinued any previous adjustments made to the hedged item are taken to the income statement using the effective interest rate method, recalculated as of the date on which the item ceased to be hedged. The previous adjustments must be fully amortised by the maturity of the item that was previously hedged.

Where a cash flow hedge is discontinued, the cumulative gains or losses on the hedging instrument recognised in the consolidated statement of equity under "*Accumulated other comprehensive income*" (while the hedge was in effect) continues to be recognised under that heading until the hedged transaction takes place, at which time the gain or loss will be recognised in the income statement, unless the hedged transaction is not expected to take place, in which case it is recognised in the income statement immediately.

# 1.3.6 Financial guarantees

Financial guarantees are contracts by which the Group undertakes to make specific payments for a third party in the event of the third party failing to do so, irrespective of their legal form, which can be, among others, bonds, bank guarantees, insurance contracts or credit derivatives.

The Group recognises financial guarantee agreements under the heading "*Financial liabilities measured at amortised cost - Other financial liabilities*" at their fair value which, at inception and unless otherwise evidenced, is the present value of the expected fees and returns to be received. At the same time, the Group recognises as credit under assets the fees and similar income received at the commencement of the operations and the accounts receivable for the present value of future cash flows yet to be received.

In the particular case of long-term guarantees given in cash to third parties within the framework of service contracts, when the Group guarantees a certain level or volume in terms of the rendering of these services, it initially recognises these guarantees at their fair value. The difference between their fair value and the disbursed amount is considered as an early payment or collection of this service, and this is recorded in the consolidated income statement during the period for which it is rendered. Subsequently, the Group applies analogous criteria to debt instruments carried at amortised cost.

Financial guarantees are classified according to the credit risk attributable to the customer or the transaction and in appropriate cases an assessment is made of the need to provide for the risk by following similar procedures for debt instruments carried at amortised cost.

Income from guarantee instruments are recorded under the heading "*Income from fees and commissions*" on the consolidated income statement and are calculated applying the rate laid down in the related contract to the nominal amount of the guarantee. Interest from long-term guarantees given in cash to third parties is recognised under the heading "*Interest income*" in the consolidated income statement.

# 1.3.7 Transfer and derecognition of financial instruments

Financial assets are only derecognised from the consolidated balance sheet when they no longer generate cash flows or when their inherent risks and benefits have been substantially transferred to third parties. Similarly, financial liabilities are derecognised from the consolidated balance sheet only when the obligations generated by the liabilities have expired or are acquired for settlement or resale.

Note 4 provides details of asset transfers in effect at the end of 2016 and 2015, indicating those that did not involve the derecognition of the asset from the consolidated balance sheet.

#### 1.3.8 Offset of financial instruments

Financial assets and liabilities are offset, i.e. reported in the consolidated balance sheet at their net amount, only when the Group has a legally enforceable right to offset the amounts recognised in such instruments and intends to settle them at their net amounts or to realise the asset and settle the liability simultaneously.

# 1.3.9 Non-current assets and assets and liabilities included in disposal groups classified as held for sale and discontinued operations

The "*Non-current assets and disposal groups classified as held for sale*" heading on the consolidated balance sheet comprises the carrying values of assets – stated individually or combined in a disposal group, or as part of a business unit that the Group intends to sell (discontinued operations) – which are very likely to be sold in their current condition within one year of the date of the consolidated annual accounts.

It can therefore be assumed that the carrying value of an asset of this kind, which may be of a financial or nonfinancial nature, will be recovered through the disposal of the item concerned rather than from its continued use.

Specifically, real estate or other non-current assets received by the Group in full or partial settlement of borrowers' payment obligations are treated as non-current assets held for sale, unless the Group has decided to make use of the assets on a continuous basis or include them in its rental operations. Investments in joint ventures or associates that meet these criteria also qualify as non-current assets held for sale. For all these assets, the Group has specific units focused on real estate management and sale.

The heading "*Liabilities included in disposal groups classified as held for sale*" includes amounts payable that are associated with disposal groups or assets, or with the Group's discontinued operations.

Non-current assets and disposal groups of items classified as held for sale are measured, on the acquisition date or thereafter, at the lowest amount of their carrying value and the net fair value of the selling costs estimated in relation to them. The carrying value at the date of acquisition of non-current assets and disposal groups of items classified as held for sale derived from foreclosure or recovery is defined as the balance pending collection on the loans or credit facilities that give rise to these purchases (net of any associated impairment allowances). Tangible and intangible assets that would otherwise be subject to depreciation and amortisation are not depreciated or amortised while they remain in the category of "*Non-current assets and disposal groups classified as held for sale*".

The valuations of these assets are carried out following the policies and criteria described in the section "Guarantees" in note 1.3.4

The main valuation companies and agencies used to obtain market value appraisals are listed in Note 6. In order to calculate the fair value less costs to sell, the Group takes into account both these appraisals and the length of time that each asset remains on the consolidated balance sheet.

Profits and losses arising from the sale of assets and liabilities classified as non-current held for sale, and impairment losses and their reversal, if applicable, are recognised under the heading "*Gains or losses on non-current assets and disposal groups classified as held for sale not eligible as discontinued operations*" on the consolidated income statement. The remaining income and expenses relating to these assets and liabilities are disclosed based on their nature.

Discontinued operations are components of the entity that have been disposed of or classified as held for sale and which: (i) represent a line of business or geographical area which is significant and separate from the rest or is part of a single coordinated plan to dispose of said business or geographical area; or (ii) are subsidiaries acquired solely in order to be resold. Income and expenses of any kind generated by discontinued operations during the year, including those granted before they were classified as discontinued operations, are presented net of the tax effect as a single amount under the heading "*Gains or losses after tax from discontinued operations*" in the consolidated income statement, both when the business has been derecognised and when it continues to be recorded under assets at the year end. This heading also includes results from their sale or disposal.

# 1.3.10 Tangible assets

Tangible assets include: (i) property, plant and equipment held by the Group for current or future use which is expected to be used for over one year; (ii) property, plant and equipment transferred to customers under operating leases; and (iii) investment properties, which include land, buildings and other construction held in order to be leased out or to obtain a capital gain on their sale. This heading also includes tangible assets received as payment of debts classified on the basis of their end utilisation.

As a general rule, tangible these assets are valued at cost less accumulated depreciation and less any impairment losses identified from a comparison of the carrying value of each item with its recoverable amount.

Depreciation of tangible assets is calculated using the straight-line method, applying the estimated years of useful life of the various items to the acquisition cost of the assets less their residual value. The land on which the buildings and other structures stand is considered to have an indefinite life and is therefore not depreciated.

The annual depreciation charge on tangible assets is reflected against the consolidated income statement and calculated over the remaining years of their estimated useful lives, on average, of the different asset groups:

	Useful life (years)
Land and buildings	37.5 to 75
Fixtures and fittings	4.2 to 25
Furniture and office equipment	3.3 to 18
Vehicles	3.1 to 6.25
Cash dispensers, computers and computer equipment	4

The Group reviews the estimated useful life of tangible assets at least at the end of each year in order to detect any major changes in them which, if they arise, are adjusted through the relevant adjustment in the consolidated income statement in future years to the depreciation charge based on the new estimated useful life.

At each reporting date, the Group analyses whether there are internal or external indications that a tangible asset might be impaired. If there is evidence of impairment, the Group analyses if such impairment has actually taken place by comparing the asset's carrying value with its recoverable value (the higher of its fair value less selling costs and its value in use). When the asset's carrying value exceeds the recoverable value, the Group reduces the carrying value of the corresponding item to its recoverable value and future depreciation charges are adjusted in proportion to the adjusted carrying value and new remaining useful life, if this needs to be re-estimated. Where there are indications that the value of an asset has been recovered, the Group records the reversal of the impairment loss recognised in previous years and adjusts future depreciation charges accordingly. The reversal of an impairment loss on an asset will in no circumstances result in an increase in its carrying value above the value that the asset would have had if impairment losses had not been recognised in previous periods.

In particular, certain tangible assets are assigned to cash generating units in the banking business. Impairment tests are conducted on these units to verify whether sufficient cash flows are generated to support the assets' value. To this end, the Group: (i) calculates recurring net cash flow at each branch based on the accumulated contribution margin less an allocated recurring risk cost; and (ii) this recurring net cash flow is regarded as a perpetual flow and a valuation is effected using the discounted cash flow method applying a cost of capital of 10% and a zero growth rate in perpetuity.

For real estate investments, the Group uses third party appraisals, registered in the Bank of Spain's special register of valuation firms according to criteria set forth in Order ECO/805/2003. In the case that tangible assets have been received in payment of debt, independently of their intended use, the Group applies criteria which is similar to the criteria described in note 1.3.4 for these assets. Maintenance expenses and the maintenance of tangible assets are recorded on the consolidated income statement for the year in which they occur.

# 1.3.11 Leases

#### Finance leases

A lease is treated as a finance lease if substantially all of the risks and rewards of ownership of the asset are transferred.

Where the Group is the lessor of an asset, the sum of the present values of payments receivable from the lessee is recorded as financing provided to a third party and is therefore included in the consolidated balance sheet under the heading "*Loans and receivables*". This financing includes the exercise price of the purchase option available to the lessee upon the termination of the contract in cases where the exercise price is sufficiently lower than the fair value of the asset at the date of maturity of the option, such that it is reasonably likely to be exercised.

When the Group acts as lessee, the cost of the leased assets is recorded in the consolidated balance sheet according to the nature of the leased asset, and at the same time a liability is reflected for the same amount which will be the lower of the fair value of the leased asset and the sum of the present values of the amounts payable to the lessor, plus, if appropriate, the exercise price of the purchase option. These assets are depreciated using procedures similar to those applicable to tangible assets for the Group's own use.

Finance income and expense arising from leasing agreements are credited or charged to the consolidated income statement such that the return remains constant throughout the term of the lease.

#### **Operating leases**

In operating leases, ownership of the leased asset and substantially all of the risks and rewards of ownership of the asset remain with the lessor.

When the Group is the lessor of the asset, the acquisition cost of the leased item is recorded under the heading "*Tangible assets*". These assets are depreciated by the same procedure as for own-use property of similar type and the revenues from the leases are recognised in the consolidated income statement on a straight-line basis.

Where the Group is the lessee, the expenses arising from the lease, including any incentives offered by the lessor, are recorded in the consolidated income statement on a straight-line basis. When contracts provide for the possibility of revising the instalments, the revision takes place, in general, annually on the basis of fluctuations in the consumer price index in Spain or the country in which the asset is located, without any mark-up being added to the figure obtained thereby.

# Sale and lease-back

In the case of sale at fair value and subsequent lease-back under an operating lease, any profit or loss is recorded at the time of the sale. In the event of a subsequent financial lease, the income generated is apportioned over the term of the lease.

When determining whether a sale with lease-back operation results in an operating lease the Group analyses, among other points, whether at the inception of the lease there are purchase options which, due to their terms, are reasonably likely to be exercised, and which party will receive the losses or gains derived from fluctuations in the fair value of the residual amount of the relevant asset.

# 1.3.12 Intangible assets

Intangible assets are identifiable, non-physical, non-monetary assets that arise as a result of an acquisition from third parties or which are developed internally by the Group. An intangible asset will be recognised when it meets this criterion and the Group considers it likely that economic benefits will flow from the asset and its cost can be reliably measured.

Intangible assets are initially recognised at acquisition or production cost and are subsequently measured at cost less, if appropriate, accumulated depreciation and any impairment loss which may have been sustained.

#### <u>Goodwill</u>

A positive difference between the cost of a business combination and the acquired portion of the net fair value of the assets, liabilities and contingent liabilities of the acquired entity is recognised on the consolidated balance sheet as goodwill. This difference represents an advance payment made by the Group of the future economic benefits derived from the entities acquired that are not individually and separately identifiable and recognisable. Goodwill is not amortised and is recognised only when acquired for valuable consideration in a business combination.

Goodwill is assigned to one or more cash generating units (CGU) which are expected to benefit from the synergies derived from the business combinations. These CGU are the smallest identifiable groups of assets which, as a result of their continuous functioning, generate cash flow for the Group irrespective of other assets or groups of assets.

The CGUs to which the goodwill has been assigned are tested annually for impairment, or whenever there is evidence that impairment might have arisen. In this respect, the Group recalculates the recoverable amount mainly using the distributed profit discount method in which the following parameters are taken into account:

- Key business assumptions: these assumptions are used as a basis for cash flow projections as part of the valuation. For businesses engaging in financial operations, projections are made for variables such as: changes in lending volumes, default rates, customer deposits and interest rates under a forecast economic scenario, and capital requirements.
- Estimates of macroeconomic variables and other financial parameters.
- Projection periods: this is usually five years, after which a recurring level is attained in terms of both income and profitability. These projections take account of the economic outlook at the time of the valuation.
- Type of discount: the present value of future dividends, from which a value in use is derived, calculated using a discount rate that portrays the capital cost of the entity (Ke) from the standpoint of a market participant. To determine the capital cost the CAPM method is used in accordance with the formula: "Ke = Rf +  $\beta$  (Rm) +  $\alpha$ ", where: Ke = required return or cost of capital; Rf = Risk-free rate;  $\beta$  = Company's systemic risk coefficient; Rm = Expected return of the market and  $\alpha$  = Non-systemic risk premium.
- Growth rate used to extrapolate cash flow projections beyond the period covered by the most recent forecasts: based on long-term estimates for the main macroeconomic figures and key business variables, and bearing in mind the current financial market outlook at all times, an estimate of a zero rate of growth in perpetuity can be arrived at.

If the carrying value of CGU is higher than its recoverable amount, the Group recognises an impairment loss which is allocated firstly by reducing the goodwill attributed to that CGU and secondly, if any losses remain to be allocated, by reducing the carrying value of the remaining assigned assets on a proportional basis. Impairment losses recognised for goodwill cannot subsequently be reversed.

# Other intangible assets

This heading mainly includes intangible assets identified in business combinations such as brands and contractual rights arising from relations with customers derived from acquired businesses, as well as computer software.

These intangible assets have finite useful lives and are amortised on the basis of their useful lives according to criteria similar to those used for tangible assets. In particular, the useful lives of brands and contractual rights arising from customer relations in acquired businesses vary between five and 15 years, while for computer software the average useful life is seven years.

The criteria for recognising impairment losses in intangible assets and any recoveries of impairment losses recorded in earlier periods are similar to those applied to tangible assets. In this respect, the Group determines whether there is evidence of impairment, comparing actual trends with assumptions applied in the parameters used when they were first recognised. These include possible loss of customers, average customers' balances, average ordinary margin and the efficiency ratio assigned.

# 1.3.13 Inventories

Inventories are non-financial assets that are held for sale or for use by the Group in the normal course of business, or are in the process of production, construction or development for such sale, or are to be consumed in the production process of in the rendering of services.

In general, inventories are valued at the lower of their cost value, including all purchase and conversion costs and other direct and indirect costs incurred in bringing the inventories to their present condition and location, and their net realisable value.

Net realisable value means the estimated sale price net of the estimated production and marketing costs to carry out the sale. This figure is revised and recalculated on the basis of actual losses incurred on the sale of the assets.

Any value adjustments to inventories, whether caused by impairment due to damage, obsolescence or a fall in sale prices, to reflect their net realisable value, or arising from other losses, are recognised as expense in the year in which the impairment or other loss occurred. Any subsequent recoveries in value are recognised in the consolidated income statement in the year in which they occur.

Impairments in the value of inventories comprising land and buildings are calculated on the basis of appraisals by independent professional valuation companies registered into the Bank of Spain's Special Register of Valuation Firms. Such appraisals are carried out according to the rules for the valuation of real estate and associated rights for specified financial purposes, set out in the Order ECO/805/2003. In the case that the inventories have been received in payment of debt, the Group applies criteria similar to the criteria described in note 1.3.4 for these assets. The book value of the inventories is derecognised from the consolidated balance sheet, and it is recorded as en expense during the year in which the income proceeding from its sale is recorded.

# 1.3.14 Own equity items

An own equity item is defined as an equity instrument that:

- Does not involve any contractual obligation to the issuer which entails: delivering cash or another financial asset to a third party, or exchanging financial assets or liabilities with a third party on terms potentially unfavourable to the issuer.
- Will or may be settled in the issuer's own equity instruments: when it is a non-derivative instrument, the issuer is or may not be obliged to deliver a variable number of its own equity instruments; when it is a derivative instrument, it will or may be settled for a fixed amount of cash or another financial asset, for a fixed number of the issuer's own equity instruments.

All transactions in the Group's own equity items, including their issuance or redemption, are recognised directly as consideration in the consolidated statement of equity.

Changes in the value of instruments classified as own equity items are not recognised in the financial statements. Any consideration paid or received for such instruments is added to or deducted directly from the consolidated statement of equity and the associated transaction costs are deducted therefrom.

Equity instruments issued in full or partial settlement of a financial liability are recognised at fair value unless this cannot be reliably determined. In this case, the difference between the carrying value of a financial liability (or any part thereof) that has been settled and the fair value of the equity instruments issued is recognised in the income statement for the period.

On the other hand, compound financial instruments, which are those contracts which simultaneously generate a financial liability and their own equity instrument for the issuer (such as, for example, convertible debentures which grant their holder the right to convert them into equity instruments of the issuing entity) are recognised on the date of their issue, separating their components and classifying them in accordance with the economic fund.

The assignment of the initial amount to the different components of the compound instrument will not imply, under any circumstances, a recognition of income. The amount shall firstly be assigned to the component which is a financial liability, including any implicit derivative for which its own equity is not used as an underlying asset. The amount shall be obtained based on the fair value of the entity's financial liabilities, with similar characteristics to compound instruments, but which are not associated with own equity instruments. The attributable value at the start of the capital instrument will be the residual portion of the initial amount of the compound instrument, once the fair value assigned to the financial liability has been deducted.

# 1.3.15 Remuneration based on equity instruments

The delivery to employees of the Group's own equity instruments in payment for their services, where the instruments are determined at the start and are delivered on completion of a specified period of service, is recognised as an expense for services over the period during which the services are being provided, with a balancing entry under the heading "*Other equity instruments*" in the consolidated statement of equity. On the grant date, the services received are measured at fair value, unless this cannot be reliably estimated in which case they are measured by reference to the fair value of the committed equity instruments, bearing in mind the time-periods and other conditions envisaged in the commitments.

The amounts recognised in the consolidated statement of equity are not subsequently reversed, even when employees do not exercise their right to receive the equity instruments.

For transactions involving remuneration based on shares which are paid in cash, the Group records an expense for services as the employees provide them, with a balancing entry under the heading "*Provisions - Other provisions*" for the fair value of the liability incurred. The Group recognises said liability at fair value until it is settled. Value fluctuations are recognised in profit/loss for the year.

#### 1.3.16 Insurance contracts

Insurance premiums under insurance contracts issued by the consolidated insurance companies are taken to the income statement when the relevant receipts are issued. The estimated cost of claims to be paid is charged to the consolidated income statement based on the amounts that will be necessary to settle the claim. At year end the amounts collected and not accrued and the costs incurred but not paid at that date are apportioned to the appropriate periods.

Direct insurance technical reserves received by the consolidated companies to cover obligations undertaken arising from the insurance contracts that are in force at the year end are recorded by the Group under the heading *"Liabilities under insurance or reinsurance contracts"* of the consolidated balance sheet.

The most significant technical reserves are as follows:

- Unearned premium reserves: records the fraction of premiums accrued during the year that must be allocated to the period between the year end date and the termination of the relevant insurance coverage.
- Current risk provisions: this complements the unearned premium reserve with respect to the amount in which this reserve is not sufficient to reflect the valuation of risks and expenses to be covered which pertain to the coverage period still to run at the year-end date.

- Provisions for claims: this reflects estimated values of outstanding obligations derived from claims arising before the year end, for both claims pending settlement and payment and claims yet to be recognised, after deducting payments made in advance and taking into consideration the internal and external settlement expenses.
- Mathematical provisions: includes the year-end value of the insurance company's obligations net of the obligations pertaining to the policy holder under life insurance policies.
- Provisions for life insurance when the investment risk is assumed by the insurance policy holders: the amount of the provisions is determined according to the valuation of the assets linked specifically to the contract.
- Provisions for premiums and profit-sharing: includes benefits accruing in favour of policy holders as a whole and premiums to be returned to them, provided these amounts have not been allocated on an individual basis.

The heading "*Assets under insurance or reinsurance contracts*" on the consolidated balance sheet recognises the amounts that the consolidated companies are entitled to receive under reinsurance contracts between them and third parties and, specifically, the share of the reinsurance in the technical reserves.

To reduce any accounting mismatches, the Group records changes in the fair value of the financial assets that back up insurance contracts and are classified under the heading "*Available-for-sale financial assets*" under the heading "*Liabilities under insurance and reinsurance contracts*" on the consolidated balance sheet.

The Group's insurance companies utilise the following assumptions for pricing and calculating insurance contract reserves:

- The biometric tables allowed by the Regulations on the arrangement and supervision of private insurance are utilised for guarantees in the life insurance business.
- Mortality tables published by reinsurers or rates supplies by the Company's reinsurers are used for guarantees in the casualty insurance business and in areas complementary to the life insurance business. These rates are recharged after adding the relevant mark-ups to avoid potential variances due to claims during the term of the product.
- Technical interest on the products with a high savings component is calculated taking into account whether or not there are investments assigned to the product. In insurance products with assigned investments, technical interest is set based on the yield from the investments assigned after deducting the relevant mark-up to comply at all times with current regulations governing the matching of flows as well as the corresponding profit margin for the insurance companies. In insurance products without assigned investments, a minimum technical interest rate is applied, which is revised on a half-yearly or annual basis. Additionally, there are products in which customers are provided with a share in profits in addition to the minimum technical interest rate based on the yield obtained by the insurance companies on the investment of the technical reserves which are recorded by increasing the technical provisions as it is attributed to the customers concerned.

The following table sets out the main technical bases for the insurance companies' products:

Product	Mortality table	Technical interest rate
Individual risk life insurance	GKM/F 95 - GKM-5 95 - PASEM 2010 - PASEM 2010 unisex	0.5% - 2%
Individual savings insurance	PERM/F 2000 P - GRM/F 95 - PER M/F 2000 P unisex - GKM/F 95 - PASEM 2010 unisex	0.25% - 6%

At each reporting date the Group evaluates the adequacy of the liabilities recognised under insurance contracts by comparing the value recognised on the consolidated balance sheet against the current estimates of future cash flows resulting from the contracts in force. If these estimates are higher than the recognised value, the Group records the difference on the consolidated income statement for the year.

# 1.3.17 Provisions and contingent assets and liabilities

Provisions are current obligations of the Group which have arisen from past events and whose nature at the balance sheet date is clearly specified, but which are of uncertain timing and amount; when such obligations mature or become due for settlement, the Group expects to settle them through an outflow of resources embodying economic benefits.

In general, the Group's consolidated annual accounts include all significant provisions with respect to which it is estimated that the likelihood of having to meet the obligation is higher than not having to meet it. These provisions include, among others, commitments undertaken with employees by some entities within the Group (see Note 1.3.18), as well as provisions for legal and other disputes.

Contingent liabilities are possible obligations that arise from past events and whose existence will be confirmed only by the occurrence or non-occurrence of one or more future events that lie outside the Group's control. Contingent liabilities include present obligations of the Group, the settlement of which is not likely to result in an outflow of resources embodying economic benefits or whose amount, in extremely rare instances, cannot be measured with sufficient reliability. Contingent liabilities are not recognised in the consolidated annual accounts but are disclosed in the consolidated notes of the accounts.

As set forth in IAS 37.92, if the bank considers that to give a detailed breakdown of information on certain provisions and contingent liabilities would seriously affect the Group's position in disputes with third parties related to situations which contemplate provisions and contingent liabilities (such as those linked to certain disputes or arbitration issues), the bank chooses not to give details of this information.

Contingent assets are potential assets arising out of past events the existence of which is conditional and must be confirmed when events that are out of the Group's control occur or do not occur. These contingent assets are not recognised on the balance sheet or consolidated income statement, but are disclosed in the consolidated notes to the accounts provided that an increase in resources that embody profits for this reason is likely.

# 1.3.18 Provisions for pensions

# Pension commitments

The Group's pension commitments to its employees are as follows:

#### Defined contribution schemes

These are predetermined contributions made to a separate entity under the agreements reached with each group of employees in particular, without any legal or effective obligation to make additional contributions where the separate entity is unable to pay benefits to the employees for the services rendered in the current year and in previous years.

These contributions are recorded each year in the consolidated income statement.

#### Defined benefit plans

Defined benefit plans provide for all current commitments under Articles 42, 43, 44 and 48 of the 23rd Collective Agreement for the Banking Industry.

These commitments are financed through the following vehicles: the pension scheme, insurance contracts, internal funds and the voluntary benefit entity "E.P.S.V.".

1. The pension scheme:

Banco Sabadell's employee pension scheme covers benefits payable under the aforementioned Collective Agreement with the employees belonging to regulated collectives, with the following exceptions:

- Additional commitments on early retirement as provided for by Article 43 of the Collective Agreement.
- Disability occurring in certain circumstances.
- Benefits for widowhood and orphanhood payable on the death of retired employees recognised as having entered the Bank's service after 8 March 1980.

The Banco Sabadell employee pension scheme is regarded for all intents and purposes as an asset of the plan for the obligations insured in non-Group entities (National-Nederlanden Vida, VidaCaixa and Generali Seguros). Those pension scheme obligations which are insured in the Group's associates are not regarded as scheme assets.

#### 2. Insurance contracts:

The insurance policies provide general cover for specified commitments under Articles 43 and 44 of the 23rd Collective Agreement for the Banking Industry, including:

- Commitments that are expressly excluded from the Banco Sabadell employee pension scheme (described above).
- Serving employees covered by a collective agreement with the former Banco Atlántico.
- Pension commitments in respect of some serving employees, not provided for under the collective agreement.
- Commitments towards employees on leave of absence who are not entitled to benefits under the Banco Sabadell employee pension scheme.
- Commitments towards early retirees. These may be partly financed out of pension rights under the Banco Sabadell employee pension scheme.

These insurance policies have been arranged with non-Group insurers, principally for commitments to former Banco Atlántico employees (FIATC and VidaCaixa), and also with BanSabadell Vida, S.A. de Seguros y Reaseguros.

#### 3. Internal funds:

Internal funds cover obligations to early retirees up to their legal retirement age for employees previously working for Banco Sabadell, Banco Guipuzcoano and Banco CAM.

4. The voluntary benefit entity "E.P.S.V.".

The acquisition of Banco Guipuzcoano resulted in the takeover of Gertakizun, E.P.S.V., which covers defined benefit commitments in respect of the bank's serving and former employees and are insured by policies (National-Nederlanden Vida, Plus Ultra Seguros and CNP Vida). This entity was set up by Banco Guipuzcoano in 1991 as a legally separate entity. Pension commitments to serving and former employees are fully covered by non-Group entities.

# Accounting record

The consolidated balance sheet heading "*Provisions - Pensions and other post employment defined benefit obligations*" includes the actuarial present value of pension commitments, which is calculated individually using the projected unit credit method on the basis of financial and actuarial assumptions with are set out below. The same method is used to analyse the sensitivity described in Note 24.

From the obligations so calculated, the scheme assets at their fair value have been deducted. These assets, including insurance policies, are those from which pension obligations are to be settled since they meet the following requirements:

- They are not owned by the Group but by a legally separate, non-related third party.
- They are available only to pay or fund employee benefits and are not available to creditors of the Group, even in the event of the Bank becoming insolvent.
- They cannot be returned to the Group unless the assets remaining in the scheme are sufficient to meet all obligations of the scheme and of the bank relating to employee benefits, or unless assets are to be returned to the bank to reimburse it for employee benefits previously paid.
- They are not non-transferable financial instruments issued by the Group.

The assets that back pension commitments shown in the individual balance sheet of BanSabadell Vida, S.A. de Seguros y Reaseguros are not scheme assets as the company is a related party of the bank.

Pension commitments are recognised as follows:

- On the consolidated income statement, net interest on the net defined benefit liability (asset) arising from pension commitments and the cost of the services, including this cost (i) cost of current year services, (ii) cost of past services arising from past changes made to existing commitments or from the introduction of new benefits and (iii) any gain or loss arising from a scheme settlement.
- Under the heading "Accumulated other comprehensive income" in the consolidated statement of equity, the re-evaluation of the net liabilities (assets) for pension commitments, which includes (i) actuarial gains and losses generated in the year arising from differences between the prior actuarial assumptions and the real situation and from changes in the actuarial assumptions made, (ii) the performance of the scheme assets, and (iii) any change in the effects of the asset limit, excluding, for the last two items, the amounts included in net interest on the net liabilities (assets).

The amounts recorded in the consolidated statement of equity are not reclassified to the consolidated income statement in subsequent years but are reclassified under the heading "*Other reserves - Other*" in the consolidated statement of equity.

# <u>Assumptions</u>

The most relevant actuarial assumptions used in the valuation of pension commitments are as follows:

	2016	2015
Tables	PERM / F 2000 New production	PERM / F 2000 New production
Technical interest rate, pension scheme	1.25% annual	1.75% annual
Technical interest rate, internal fund	1.25% annual	1.75% annual
Technical interest rate, related-party policies	1.25% annual	1.75% annual
Technical interest rate, non-related party policies	1.25% annual	1.75% annual
Inflation	2.00% annual	2.00% annual
Salary growth	3.00% annual	3.00% annual
Retirements due to disability	SS90-Absolute	SS90-Absolute
Staff turnover	None assumed	None assumed
Early retirement	Allowed for	Allowed for
Ordinary retirement	65 or 67 years	65 or 67 years

In 2016 and 2015, the technical interest rate on all commitments has been determined by reference to the yield on AA-rated corporate bonds (iBoxx  $\in$  Corporates AA 10+), with an average duration of 10.62 years in 2016 and 10.74 years in 2015.

The age of early retirement is assumed to be the earliest retirement date after which pension entitlements cannot be revoked by the employer for all employees.

The yield on long-term assets related to scheme assets and insurance policies linked to pensions has been determined by applying the same technical interest rate (1.25% in 2016).

# 1.3.19 Transactions in foreign currency and currency translation differences

The Group's functional and presentation currency is the euro. All balances and transactions denominated in currencies other than the euro are therefore treated as denominated in a foreign currency.

On initial recognition, debit and credit balances denominated in foreign currency are translated to the functional currency at the spot exchange rate, defined as the exchange rate for immediate delivery, on the recognition date. Subsequent to initial recognition, the following procedures are used to translate foreign currency balances to the functional currency of each investee:

- Monetary assets and liabilities are translated at the closing exchange rate, defined as the average spot exchange rate at the reporting date.
- Non-monetary items measured at historical cost are translated at the exchange rate ruling on the date of acquisition.
- Non-monetary items stated at fair value are translated at the exchange rate ruling on the date on which the fair value was determined.
- Income and expenses are translated at the exchange rates ruling at the transaction date.

In general, foreign exchange differences arising on the translation of debit and credit balances denominated in foreign currency are recorded in the consolidated income statement. However, for foreign exchange differences arising on non-monetary items measured at fair value where the fair value adjustment is made and recognised under the heading "*Accumulated other comprehensive income*" in the consolidated statement of equity, a breakdown is given for the exchange rate component of the revaluation of the non-monetary item.

Balances in the financial statements of consolidated companies whose functional currency is not the euro are translated as follows:

- Assets, liabilities and valuation adjustments are translated applying the year-end exchange rate.
- Income and expenses by applying the average exchange rate weighted by the volume of transactions of the converted entity.
- Own funds, at historical exchange rates.

Differences arising on the translation of the financial statements of consolidated companies whose functional currency is not the euro are recorded in "*Accumulated other comprehensive income*" under consolidated equity.

The exchange rates applied in the translation of foreign currency balances to euro are those published by the European Central Bank at 31 December each year.

# 1.3.20 Recognition of income and expense

Interest income and expense and similar items are generally accounted for over the period in which they accrue using the effective interest rate method, under the headings "*Interest income*" or "*Interest expenses*" of the consolidated income statement, as applicable. Dividends received from other entities are recognised as income at the time the right to receive them originates.

Generally, fee and commission income and expense and similar fees are recorded in the consolidated income statement in accordance with the following criteria:

- Those linked to financial assets and liabilities carried at fair value through profit or loss are reflected at the time of disbursement.
- Those related to transactions or services performed over a period of time are reflected over this period.
- Those relating to a transaction or service that is performed in a single act are recorded when the originating act takes place.

Financial fees and commissions forming an integral part of the effective cost or yield of a financial transaction are deferred net of associated direct costs and recognised in the consolidated income statement over the expected average life of these transactions.

The equity managed by the Group that is owned by third parties is not included in the consolidated balance sheet. Fees generated by this activity are recorded under the heading "*Income from fees and commissions*" on the consolidated income statement.

Non-financial income and expense is accounted for on an accrual basis. Deferred payments and collections are accounted for at the amount obtained by discounting expected cash flows at market rates.

For levies and tax obligations whose amount and date of payment are definitive, the commitment is recognised when the event that leads to its payment takes place in line with the legislative terms and conditions.

Therefore, the item pending payment is recognised whenever there is an obligation to pay these levies, such as in the case of contributions to deposit guarantee funds of different countries in which the Group operates. In those cases where the payment obligation is accrued over time, this is progressively recognised throughout the accrual period.

# Deposit Guarantee Fund

The bank forms part of the Deposit Guarantee Fund. In 2016, the Management Committee of the Deposit Guarantee Fund of Credit Institutions, in accordance with that laid out in Royal Decree Law 16/2011 and Royal Decree 2606/1996, set the contribution for all entities adhered to the deposit guarantee scheme at 1.6 per thousand of the amount of the deposits guaranteed at 30 June 2016. The calculation of each entity's contribution was based on the amount of deposits guaranteed, and the risk profile of the entity, taking into account indicators such as capital adequacy, the quality of the assets and liquidity, which have been defined in Bank of Spain Circular 5/2016 of 27 May. Furthermore, the contribution to the securities guarantee fund has been set at 0.2% of each 5% of the guaranteed amount of the securities and other financial instruments at 31 December 2016. In accordance with IFRIC 21, the transaction is recognised whenever there is a payment obligation, recorded at 31 December each year (see Note 35).

Some of the consolidated entities are integrated into systems which are similar to the Deposit Guarantee Fund and they make contributions to these systems in accordance with national regulations (see Note 35). The most relevant entities are listed below:

- TSB Bank plc makes contributions to the Financial Services Compensation Scheme which are not accrued until 1 April each year.
- Sabadell United Bank makes contributions to the Deposit Guarantee Fund as established by the Federal Deposits Insurance Corporation. The payment obligation, and therefore its collection, is quarterly.

#### Single Resolution Fund

Law 11/2015 of 18 June, together with its regulatory implementation with Royal Decree 1012/2015, entailed the transposition of Directive 2014/59/EU to the Spanish legal system, therefore a new framework for the resolution of credit institutions and investment firms was established, which is also one of the standards that have contributed to the constitution of the Single Resolution Mechanism, created through Regulation (EU) 806/2014, which establishes standards and procedures for credit institutions and investment firms within the framework of a Single Supervisory Mechanism and a Single Resolution Fund at a European level.

In the context of the implementation of this regulation, on 1 January 2016, the Single Resolution Fund entered into force, which established itself as a financing instrument which the Single Resolution Board could use. The Single Resolution Board is the European Authority which makes decisions on the resolution of failing banks, in order to efficiently undertake the resolution measures which are adopted. The Single Resolution Fund receives contributions from credit institutions and investment services companies subject to the same.

The calculation of each entity's contribution to the Single Resolution Fund, regulated by Regulation (EU) 2015/63, is based on the proportion that each entity represents with respect to the aggregate total liabilities of the entities adhered to the Fund, after shareholders' funds have been deducted and the guaranteed amount of the deposits are deducted. The latter is then adjusted to the entity's risk profile (see Note 35). The obligation to contribute to the Single Resolution Fund is accrued on 1 January of each year.

# 1.3.21 Corporate income tax

Corporate income tax applicable to the Spanish companies in Banco Sabadell Group and similar taxes applicable to foreign subsidiaries and investees are treated as expenses and are recorded in the consolidated income statement under the heading "*Expenses or income from tax on income from continuous activities*" unless the tax has arisen on a transaction accounted for directly in the consolidated statement of equity, in which case it is also recognised directly therein.

The total corporate income tax expense is equivalent to the sum of current tax calculated by applying the relevant rate to taxable income for the year (after applying legally admissible deductions and credits) and the variation in deferred tax assets and liabilities recognised in the consolidated income statement.

Taxable income for the year may be at variance with the profit for the year as shown on the consolidated income statement, as it excludes items of income or expenditure that are taxable or deductible in other years as well as items which are non-taxable or non-deductible.

Deferred tax assets and liabilities relate to taxes expected to be payable or recoverable arising from differences between the carrying value of the assets and liabilities figuring in the financial statements and the related tax bases ("tax value"), as well as tax losses carried forward and unused tax credits that might be offset or applied in the future. They are calculated by applying to the relevant temporary differences or tax credits at the tax rate at which they are expected to be recovered or settled (see Note 43).

A deferred tax asset such as a tax prepayment or a credit in respect of a tax deduction or allowance, or a credit in respect of tax loss is always recognised provided that the Group is likely to obtain sufficient future taxable profits against which the tax asset can be realised, and that these are not derived from the initial recognition (except in a business combination) of other assets and liabilities in an operation that does not affect either the tax result or the accounting result.

"Tax assets" and "Tax liabilities" figuring on the consolidated balance sheet include all tax assets/liabilities, differentiating between current (to be recovered in the coming 12 months, such as the payment of Corporate Income Tax to the Spanish Tax Authorities (*Hacienda Pública*) and deferred (to be recovered/paid in future years).

Deferred tax liabilities arising from temporary differences associated with investments in subsidiaries and associates are recognised in the accounts unless the Group is capable of determining when the temporary difference will reverse and, in addition, such a reversal is unlikely.

At each year-end, recorded deferred tax assets and liabilities are reviewed to ascertain whether they are current and to ensure that there is sufficient evidence of the likelihood of generating future tax profits that will allow them to be used, in the case of assets, applying relevant adjustments as necessary.

To conduct the above-mentioned analysis, the following variables are taken into consideration:

- Forecasts of results of the Spanish tax group and of the other entities, based on the financial budgets approved by the bank's administrators for a four-year period, subsequently applying constant growth rates similar to the mean long-term growth rates of the sector in which the various companies of the Group operate.
- Estimation of the reversal of timing differences, based on their nature, and
- The term or deadline established by current laws in each country for the reversal of the various tax assets.

Income or expenses recognised directly in the consolidated statement equity that do not affect profits for tax purposes are recorded as temporary differences.

Banco Sabadell Group companies included in Spain's consolidated tax regime for Corporate Income Tax are listed in Schedule I.

# 1.3.22 Consolidated cash flow statements

Consolidated cash flow statements have been prepared using the indirect method, so that, based on the Group's results, the non-monetary transactions and all types of deferred payment items and accruals which have been or will be the cause of operating income and expense have been taken into account, in addition to the income and expense associated with cash flows from activities classified as investment or funding activities. Therefore, in addition to cash, cash components or their equivalents are classified as short-term investments in highly liquid assets which have a low risk of changes in value, specifically cash balances, deposits in central banks and demand deposits in credit institutions.

The consolidated cash flow statement includes certain items which are defined as follows:

- Cash flows: inflows and outflows of cash and cash equivalents, where "cash equivalents" are shortterm, highly liquid investments with a low risk of changes in value. For these purposes, in addition to cash, cash components or equivalent are also classified as deposits held with central banks and demand deposits held with credit institutions.
- Operating activities: typical day-to-day activities of the Group and other activities that cannot be classified as investment or financing activities.
- Investment activities: the acquisition, sale or other disposal of long-term assets and other investments not included in cash and cash equivalents or in operating activities.
- Financing activities: activities that result in changes in the size and consolidated composition of equity and of liabilities that do not form part of operating activities.

No situations requiring the application of significant judgements to classify cash flows have arisen during the period.

There have been no significant transactions that have not generated cash flows not reflected in the cash flow statement.

# 1.4. Comparability

The information presented in these consolidated annual accounts for 2015 is provided solely and exclusively for purposes of comparison with the information for the year ended 31 December 2016, and therefore does not constitute the Group's consolidated accounts for 2015.

These consolidated annual accounts have been adapted to Circular 5/2014 of 28 November and Circular 3/2015, of 29 July, of Bank of Spain, and subsequent Circulars published by Bank of Spain, amending Circular 4/2004 of 22 December, and therefore the terminology and presentation of certain items of the financial accounts have been modified compared with the 2015 consolidated annual accounts. Furthermore, the information corresponding to 2015 included in these current consolidated current accounts has been redrafted in accordance with this criteria in order for it to become comparable.

The main reclassification for this purpose has involved assets on the consolidated balance sheet, relative to demand deposits with credit institutions, which have gone from being recorded under the heading "*Loans and receivables*" ("*Lending*", pursuant to the terminology previously used in the consolidated balance sheet), to being recorded under the heading "*Cash and cash balances at central banks*", in the amount of €1,204 million at 31 December 2015 (€1,300 million at 1 January 2015.) The reclassifications in the rest of the headings in the consolidated annual accounts have not been significant.

Furthermore, in order to interpret the 2016 consolidated annual accounts, it should be taken into account that on 30 June, 2015, the Group took control of TSB Banking Group plc (see Note 2), for which reason the consolidated income statement for 2015, presented for comparison purposes with the consolidated income statement for 2016, only includes the results obtained by this investee from the date of its acquisition until the end of 2015, pursuant to current legislation (see note 1.3.1).

# Note 2 – Banco Sabadell Group

The companies comprising the Group at 31 December 2016 and 2015 are listed in Schedule I along with their registered offices, principal activities, the bank's proportional holding in each, key financial data and the consolidation method used (full consolidation or equity method) in each case.

Schedule II provides a breakdown of consolidated structured entities (securitisation funds).

The following section provides a description of the business combinations, acquisitions and sales or liquidations which are most representative of shareholdings in other entities (subsidiaries and/or investments in associates) performed by the Group during 2016 and 2015. Schedule I also includes a detailed list of the companies consolidated for the first time and those no longer consolidated for each year.

# Changes in the Group scope in 2016

# Associates consolidated for the first time:

No significant additions in the scope of consolidation have taken place during the year (see Schedule I).

#### Subsidiaries no longer consolidated:

On 13 April 2016, Banco Sabadell transferred its full holding (20.994% of its share capital) in Dexia Sabadell, S.A. to Dexia Crédit Local, S.A. (Dexia), at a price of €52,390 thousand, representing gross gains for Banco Sabadell in the same amount, under the terms ratified by the arbitration award.

This transfer was the result of Banco Sabadell exercising its put option on 6 July 2012 to Dexia, holder of the remaining share capital of the above-referred entity.

The transfer of shares by Banco Sabadell and their acquisition by Dexia occurred after having sent the relevant communications to the corresponding regulatory authorities.

#### Other significant corporate operations and contracts in 2016

#### Agreement for the sale of Mediterráneo Vida, Sociedad Anónima de Seguros y Reaseguros

On 22 June 2016, the Group reached an agreement to sell 100% of its shares in Mediterráneo Vida, Sociedad Anónima de Seguros y Reaseguros, a life insurance and saving/retirement insurance undertaking that has managed a portfolio with no new business since 2014 to a consortium led by Ember. The closing of this transaction is subject to obtaining the corresponding regulatory authorisation. Consequently, the Group has not recorded any gains/(losses) from this transaction in the consolidated income statement for 2016, although it has reclassified assets and liabilities from this subsidiary company to the headings of "*Non-current assets and disposal groups classified as held for sale*" and "*Liabilities and disposal groups classified as held for sale*", of the consolidated balance sheet at 31 December 2016 pursuant to current legislation (see Note 14).

#### Changes in the Group scope in 2015

#### Associates consolidated for the first time:

#### Founding of Banco Sabadell, S.A., Institución de Banca Múltiple

On 29 January 2015, Banco Sabadell, S.A., Institución de Banca Múltiple was created in Mexico, and in August that year it obtained local regulatory licences to start operating as a commercial bank. On 4 January 2016, after completing the certification procedure of the Mexican National Banking and Securities Commission, and having met the requirements of the Bank of Mexico, the bank formally began operating.

This bank carries out corporate and business banking operations and, during 2016, it has started personal banking operations.

The Group's total investment in this bank at 31 December 2016 amounts to  $\notin$  91,554 thousand ( $\notin$  57,375 thousand in 2015).

## Acquisition process

The European Commission (EC) declared that the financial aid loaned by the British Ministry of Finance to Lloyds Banking Group plc (Lloyds) in 2008 and 2009 constituted unauthorised state aid in accordance with European regulations. As a result, the EC decided that Lloyds had to part with a business unit that provided commercial banking services in the United Kingdom which would have to meet certain conditions in order to promote competition within the sector.

This divestment obligation would have to take place before a specified date (31 December 2015, which could be extended to the end of 2016 depending on the extent to which Lloyds had decreased its shareholding in TSB).

With a view to benefiting from a banking licence already held by Lloyds Group, in September 2013, Lloyds Group decided to transfer the entirety of its divested equity to one of its vehicle companies, TSB Bank plc (whose parent company is TSB Banking Group plc or' TSB') under a new brand and operating as a new credit institution for commercial banking.

After analysing various divestment alternatives in TSB, Lloyds decided to launch a public offering in June 2014, and TSB's ordinary shares were quoted and admitted to trading in the London Stock Exchange in June 2014. Lloyds then held a 50% stake in TSB.

It was in the context of this need for divestment that, on 19 March 2015, the Board of Directors of Banco Sabadell approved the presentation of a takeover bid to acquire 100% of shares in TSB Banking Group plc ("TSB") at a price of 340 pence per share in cash, to all TSB's shareholders. Adhering to the terms of its public offering, Banco Sabadell acquired approximately 9.99% of TSB's share capital on 24 March 2015, which was owned by Lloyds Banking Group plc ("Lloyds"). The latter made an irrevocable commitment to accept the previous offer for the remaining TSB shares which it held, until it held a 50.01% stake in TSB.

The terms and conditions of the public offering, and the procedures for the bid acceptance, were set out in the offer published and distributed to TSB shareholders on 17 April 2015.

The takeover bid was supported by TSB's Board of Directors and was recommended to the shareholders at the time. It was subject to the acceptance of a minimum of 75% of TSB's share capital and voting rights, a percentage that included the shares already acquired from Lloyds and its irrevocable commitment. Similarly, the acquisition of TSB was also subject to obtaining various authorisations and consent from the Prudential Regulation Authority (PRA) of Bank of England as well as from other regulators, including anti-trust authorities.

On 30 June 2015 the final condition precedent for the acquisition of TSB was met, and this is the date on which the Group considers that it took control of TSB's assets and acquired its liabilities (acquisition date), as this was the date on which the public offering was declared unconditional in all respects.

Given that the number of bid acceptances represented over 90% of TSB shares, the Group exercised its right of forceful acquisition of TSB shares whose holders had declined the bid, pursuant to the English Companies Act, under the same conditions accepted by the other shareholders. As a result, the Group consolidated 100% of its investment in TSB on 30 June 2015, and recorded the corresponding liability with the shareholders at the amount pending settlement.

On 10 and 15 July 2015, consideration payable to TSB shareholders was paid in full to those shareholders who accepted the public offering, whose shares represented approximately 87.1% of TSB's share capital. The settlement period for the remaining shareholders, including those affected by the forceful acquisition, ended in September 2015.

On the takeover date, TSB was a bank aimed at retail customers and small businesses with a distribution reach of approximately 7% of branches in the United Kingdom, having a Common Equity Tier 1 Capital Ratio of 19.5%, and a comfortable funding position with a franchise loan-to-deposit ratio of 76.6%.

The acquisition of TSB has allowed the Group to access the UK banking market, which is attractive due to its well established and stable regulatory framework, its consistent rates of return and its good outlook for future growth. The Group expects that, under its control, TSB will be able to continue to strengthen its growth and efficiency strategies, benefiting from the Group's resources and experience in SMEs financing in the Spanish banking market.

In 2016, progress has been made in the building of the technology platform for TSB, and this project is developing satisfactorily.

A summary of TSB's consolidated balance sheet at the date of acquisition is shown below:

Asset		Equity and Liabilities	
		Liabilities	
Cash and balances with central banks	5,421,408	Trading portfolio	47,852
Held for trading	52,801	Trading derivatives	47,852
Trading derivatives	52,801	Financial liabilities at amortised cost	36,092,913
Financial assets held for sale	1,418,035	Deposits from credit institutions	111
Debt securities	1,418,035	Customer deposits	35,517,525
Lending	31,377,312	Marketable debt securities	14,077
Deposits held with credit institutions	936,800	Subordinated liabilities	561,200
Loans and advances to customers	30,440,512	Adjustments to financial liabilities due to macro-hec	46,111
Adjustments to financial assets due to macro-hedge	6,182	Hedging derivatives	266,174
Hedging derivatives	62,441	Provisions	47,090
Tangible assets	211,762	Other provisions	47,090
Property, plant and equipment	211,762	Other liabilities	613,451
For own use	211,762		
Tax assets	148,914	Equity	
Deferred	148,914	Shareholders' Funds	2,323,852
Other assets	738,225	Capital	7,028
Other	738,225	Issued	7,028
		Share premium	1,356,621
		Reserves	947,023
		Accumulated reserves (losses)	947,023
		Less: Treasury shares	(14,523)
		Profit for the year attributed to the parent company	27,703
		Valuation adjustments	(362)
		Financial assets held for sale	1,042
		Cash flow hedges	(1,403
Total assets	39,437,080	Total liabilities and equity	39,437,080
		Memorandum item:	
		Contingent commitments	6,186,296

The exchange rate applied was the rate on 30/06/2015 (0.7114  $\operatorname{pound/euro}$  )

#### Accounting of the business combination

These consolidated accounts record the valuation and accounting of this business combination based on Management's estimates of fair values of assets and liabilities; the cost of the transaction is allocated to specific assets, liabilities and contingent liabilities ("Purchase Price Allocation" or PPA). These estimates were reviewed by an independent third party.

At the takeover date, TSB's shareholders' equity stood at €2,324 million (€2,336 million excluding treasury stock).

The total price paid by Banco Sabadell for the acquisition of 100% of TSB's share capital was €2,362 million.

The following assets, liabilities and contingent liabilities of the acquired entity were valued as part of the PPA exercise:

1. Based on the analyses carried out by the Group, an expected lifetime loss on the loans to customer lending portfolio was estimated in order to adjust its estimated fair value. The amount allocated to additional provisions amounted to €151 million. A point in time Probability of Default (PD) was applied for the first three years, and a cycle-adjusted PD was applied from the fourth year on. The cycle-adjusted PD mainly affected the mortgage portfolio, due to its longer-term nature, and allowed medium- and long-term behaviour to be reflected rather than conditioning the calculation to economic conditions at the time of their valuation. For residential mortgages, a point in time Loss Given Default (LGD) was applied for the first 3 years, increased from the fourth year to reflect a longer-term parameter, less conditioned by current real estate market conditions in the UK; to this effect, the point in time LGD was weighted with the LGD downturn. For the remaining segments, the LGD corresponded to the point in time value, as these are shorter-term operations, and in segments where the LGD is not as cycle-sensitive.

2. Intangible assets including the value of contractual rights arising from relations with customers acquired from TSB for core deposits were estimated at €354 million. The value attributable to this asset was determined using the cost-saving method, estimating the current value of savings on financing costs with core deposits compared with alternative financing methods. This asset will be amortised within 8 years.

3. The value of the exclusive right of use of the TSB brand was estimated at €73 million. The value attributable to this asset was determined through the replacement cost method, consisting of establishing the cost of rebuilding or acquiring an exact replica of the asset in question. This asset will be amortised within 12 years.

4. Lastly, in the headings "*Deferred tax assets*" and "*Deferred tax liabilities*", the tax effect (with a 20% rate) was adjusted in line with the adjustments described in points 1 and 3, totalling  $\in$ 31 million and  $\in$ 15 million respectively.

A 10.9% discount rate was used in the valuation of intangible assets, which was calculated based on the Capital Asset Pricing Model (CAPM) methodology. This rate is comprised of a risk-free rate of 2.6% (using the bond in the United Kingdom with a 20-year maturity at the takeover date as a reference), a market premium of 6.0% and a beta of 1.21 plus an additional premium of 1.0% as the assets are not very liquid.

After the assets and liabilities acquired from TSB were adjusted, the resulting negative consolidation difference amounted to  $\notin$ 266 million, which is recorded on the consolidated profit and loss statement net of expenses associated with the acquisition, amounting to  $\notin$ 232 million. As explained above, the reason for which this transaction resulted in profit is due to the origin of the acquired entity TSB and the divestment carried out by Lloyds Banking Group plc (Lloyds).

If the acquisition date had been 1 January 2015, ordinary income and profit after tax that would have been contributed to the Group by TSB would amount to approximately €1,202 million and €168 million, respectively.

The variation in the Group's cash and cash equivalents resulting from the takeover of TSB amounted to  $\notin$ 5,421 million, recorded in the heading "*Other collections relating to investment activities*" of the consolidated cash flows statement.

The amounts of TSB ordinary income and profit after tax since the takeover date included in the consolidated income statement for 2015 amount to €617 million and €122 million respectively.

## Other significant corporate operations and contracts in 2015

#### Purchase of ex-UKAR credit assets

On 7 December 2015, TSB acquired a portfolio of credit assets, mostly mortgage assets, valued at GBP 3,006 million which had previously been managed by the UK Assets Resolution (UKAR). The price paid, GBP 3,041 million, was considered to reflect the fair value of the assets as the transaction was carried out at a public auction and the price of all factors influencing said fair value such as, among others, credit and conduct risk, were accounted for.

#### Acquisition of shareholding in GNB Sudameris

On 1 October 2015, Banco Sabadell acquired 4.99% of the Colombian bank GNB Sudameris, for USD 50 million. The majority shareholder of Banco GNB Sudameris is Gilex Holding, B.V., a subsidiary of Starmites Corporation, S.A.R.L., a company owned by the Gilinski family. The acquisition was complemented by a strategic business cooperation agreement, in order to seize mutual business opportunities in markets with a high growth potential, such as Colombia, Peru and Paraguay.

#### Other relevant information

#### Asset protection scheme

As a result of the acquisition of Banco CAM on 1 June 2012, the Asset Protection Scheme (APS) came into force with retroactive effect as from 31 July 2011, in accordance with the protocol on financial assistance for the restructuring of Banco CAM. Under the scheme, which covers a specified portfolio of assets with a gross value of  $\notin$ 24,644 million at 31 July 2011, the Deposit Guarantee Fund (hereinafter, FGD) will bear 80% of losses on the portfolio for a period of ten years, once impaired allowances in respect of those assets, which amounted to  $\notin$ 3,882 million at that date, have been fully applied.

The table below shows a breakdown of the asset portfolio covered by the APS on the date it entered into force (31 July 2011):

	On individual balance sheet		On Group b	alance sheet
	Balance	Provision	Balance	Provision
Loans and advances	21,711	2,912	19,117	2,263
Of which risk drawn down	21,091	-	18,460	-
Of which guarantees and contingent liabilities	620	-	657	-
Real-estate assets	2,380	558	4,663	1,096
Investments in joint venture and associates	193	52	504	163
Written-off assets	360	360	360	360
Total	24,644	3,882	24,644	3,882

Movements in the balance of the customer lending portfolio protected by the APS from its entry into force until 31 December 2016 are as follows:

Balance at 31 July 2011	18,460
Acquisition of real-estate assets	(6,611)
Collections and subrogation	(3,324)
Increase in written-off assets	(1,128)
Credit draw-downs	56
Balance at 31 December 2016	7,454

Movements in the balance of the real estate asset portfolio protected by the APS from its entry into force through 31 December 2016 are as follows:

Emillion Balance at 31 July 2011	4,663
Acquisition of real-estate assets	4,913
Sales of real-estate assets	(4,769)
Balance at 31 December 2016	4,807

In general, the objective of financial statements is to provide information which fairly represents the financial situation, financial performance, changes in equity and cash flows of an entity, for the purpose of constituting useful information to a wide range of users when they make their economic decisions. At the same time, as laid out in IAS 1- Presentation of Financial Statements, to meet this objective, the financial statements should provide information on the management carried out by the administrators of the assets they have been entrusted. Amongst other aspects, a fair presentation requires the entity to present its information so that it is relevant, reliable, comparable and understandable.

Taking the foregoing into account, and the relevance of the economic impacts deriving from the granting of the APS in the Group's financial statements, particularly with regard to: (i) the volume of doubtful assets; (ii) the NPL ratio; and (iii) the level of hedging of provisions, certain characteristics have been considered with the objective of not distorting the three indicators mentioned earlier, and therefore, ensuring that the presentation of the financial statements on the guarantees granted under the APS protocol is as faithful and comparable as possible.

With regard to customer lending classified as doubtful, as well as the real-estate assets deriving from nonpayment on behalf of the loan holders covered by the protocol, the Bank classifies doubtful balance as the amount corresponding to 20% of retained exposure due to not having transferred the credit risk to the DGF and 80% of the risk. Whilst the credit or loan is included on the balance sheet, it is presented as a standard exposure due to the existence of the transfer of credit risk. That is, for each covered asset, the Group considers the proportion of its flows that would be obtained from the borrowers or third parties and the proportion that would be obtained from the DGF as a result of the guarantee provided, taking into account the value of any mortgage guarantees securing the loan. For the purposes of preventing gross loans from becoming overvalued or duplicated by recording under the same heading the balance receivable from the DGF as well as the 80% exposure covered by the APS, the provisions constituted for this 80% are presented net of gross loans. This treatment in the presentation of such information does not have any impact on net loans.

The breakdown of the asset portfolio protected by the APS at 31 December 2016 is shown below, together with the NPL and coverage ratios, and the breakdown of financing for construction and real estate development prior to the transfer of credit risk to the DGF:

	On Group Ba	On Group Balance Sheet		Of which doubtful	
	Balance	Provision	Balance	Provision	
Loans and advances	7,463	2,571	4,768	2,552	
Of which risk drawn down	7,454	2,570	4,767	2,552	
Of which guarantees and contingent liabilities	9	1	1	-	
Real estate assets (*)	4,807	2,903	-	-	
Investments in joint venture and associates	49	30	-	-	
Written-off assets	1,476	1,476	-	-	
Total	13,794	6,980	4,768	2,552	

(\*) Real estate exposure for which credit risk has been transferred, applying the Asset Protection Scheme (see detail on the exposure to the sector of provision and real estate development in Note 4).

	2016
NPL ratio	63.89
NPL coverage ratio	53.92

	On Group Ba	On Group Balance Sheet		Of which doubtful	
	Balance	Provision	Balance	Provision	
Draw down risk loans and advances	7,454	2,570	4,767	2,552	
Of which financing for construction and real estate development (business in Spain)	3,760	1,991	3,384	1,984	
For which credit risk has been transferred	3,008	1,593	2,707	1,587	
For which credit risk has not been transferred	752	398	677	397	
Total	7,454	2,570	4,767	2,552	

The reconciliation between gross loans and net loans prior to and after the transfer of credit risk to the DGF is shown below:

Thousand euro

%

	Post credit risk transfer	Credit risk transfer	Pre credit risk transfer
	2016	2016	2016
Gross lending excluding repos	150,087,282	2,039,956	152,127,239
Of which doubtful assets	9,641,526	3,811,104	13,452,630
Of which other investments	140,445,756	(1,771,148)	138,674,609
Net lending excluding repos	145,165,935	-	145,165,935
Of which doubtful assets	9,641,526	3,811,104	13,452,630
Of which other investments	140,445,756	(1,771,148)	138,674,609
Of which allowances	(4,921,348)	(2,039,956)	(6,961,304)
NPL ratio	6.14	2.30	8.44
NPL coverage ratio	51.55	0.56	52.11

For all losses recorded for accounting purposes, deriving from loan loss provisions, loan reductions, provisions for real estate asset impairments and losses from the disposal of these assets, the bank keeps a billing statement classed under the "*Loans and receivables*" heading and recognised on the income statement, in order to reflect the collection rights of the DGF for the guarantee granted by the DGF, and to neutralise the impact of recorded losses related to assets covered by the APS. The cumulative amount recorded as of 31 December 2016 amounts to close to €5,700 million.

# Nota 3 – Proposed distribution of profits and earnings per share

Set out below is the distribution of 2016 Banco de Sabadell, S.A. profits which the Board of Directors will propose to the shareholders at the Annual General Meeting for their approval, together with the proposed distribution of Banco de Sabadell S.A.'s 2015 profits approved by the shareholders on 31 March 2016:

	2016	2015
To dividends	279,766	(a)
To statutory reserve	4,423	35,370
To Canary Island investment reserve	314	192
To voluntary reserves	95,336	266,336
Profit for the year of Banco de Sabadell, S.A.	379,839	301,898

Proposed distributions of profits of subsidiaries are subject to approval by shareholders at their respective Annual General Meetings.

The Board of Directors will propose, to the General Meeting of Shareholders, the agreement for the distribution of a gross dividend per share for the year 2016 of 0.05 euros per share.

On 27 October, 2016 the Board of Directors agreed to the distribution of a divided charged to the 2016 income statement for the total amount of 111,281 thousand euros (gross payment of 0.02 euros per share), which was paid on 30 December 2016.

Pursuant to Article 277 of the Law on Corporate Enterprises, the provisional accounting statement prepared to demonstrate the existence of sufficient liquidity and profit at the Bank at the time of approving the interim dividend is shown below.

Available for the payment of dividends according to the interim statement at:	30/11/2016
Banco Sabadell profit as of the date indicated, after provisions for taxes	5 11, 19 5
Estimated statutory reserve	4,423
Estimated Canary Island investment reserve	314
Maximum amount available for distribution	506,458
Interim dividend, proposed and distributed	111,281
Cash balance at Banco de Sabadell, S.A available (*)	4,035,094

\* Includes the balance of the heading " Cash, cash balances from central banks and other demand deposits".

(a) On 31 March 2016, the General Meeting of Shareholders approved a flexible remuneration to shareholders arranged in the form of a capital increase charged to reserves in the amount of  $\notin$ 0.05 per share, offering shareholders the opportunity to receive that amount in cash and/or in new shares through the sale of rights to free assignment, with the commitment of purchasing the free allocation rights that would be assumed by the bank.

Each shareholder received a free allocation right for each of the bank's shares which they owned. When the capital increase was carried out, each bank shareholder received one new share for every 34 right to free assignment.

As a result, on 25 April 2015, a capital increase was carried out charged to reserves in the amount of  $\notin$ 15,877 thousand through the issuance of 127,016,761 new shares with a par value of  $\notin$ 0.125 each, since 79.40% of the owners of the rights to free assignment elected to receive new shares. The remaining 18.57% of holders of rights to free assignment accepted the bank's irrevocable commitment to purchase the rights, with the result that the bank acquired 1,010,122,734 rights for a total gross amount of  $\notin$ 48,486 thousand, which is presented under "*Dividends (or members' remuneration)*", reducing "*Other reserves*" in the consolidated statement of changes in equity.

The General Meeting of Shareholders approved shareholder remuneration, supplementary to the dividend, of  $\notin 0.02$  per share consisting of the delivery of shares from the bank's treasury portfolio for an equivalent amount, which was recognised at its market value charged to the issue premium at  $\notin 106,448$  thousand, and at the difference compared to the value of the delivered treasury portfolio ( $\notin 135,695$  thousand) and cash flow peaks ( $\notin 213$  thousand) charged to Other reserves amounting to  $\notin 29,461$  thousand. Both are shown under the heading "*Dividends (or remuneration)*" of the statement of changes in equity.

The Board submitted a proposal to the Annual General Meeting in March 2016 for the reclassification of part of the voluntary reserves from 2014 as a restricted reserve over a period of 5 years to serve as a capitalisation reserve in order to apply a reduction on the tax base for Corporate Tax in accordance with the provisions of Law 27/2014 of 27 November (see Notes 25 and 43).

Under this proposal, retribution to shareholders this year, compared with the previous year, would be as follows:

	2016	2015
Flexible remuneration	-	0.05
Complementary remuneration in shares	-	0.02
Cash remuneration	0.05	-
Total remuneration	0.05	0.07

# Earnings per share

Thousand euro

Basic earnings per share are calculated by dividing the net profit or loss attributable to the Group by the weighted average number of ordinary shares outstanding in the year, excluding any treasury shares purchased by the Group. Diluted earnings per share are calculated by adjusting the attributable profit or loss, and the weighted average number of ordinary shares outstanding, for the estimated effect of all potential conversions to ordinary shares.

Earnings per share calculations are shown in the following table:

	2016	2015
Net profit attributable to the owners of the parent company (€'000)	710,432	708,441
Profit or loss (-) after taxes deriving from discontinued operations	-	-
Weighted average number of ordinary shares outstanding (*)	5,451,978,110	4,889,348,750
Weighted average number of ordinary shares using adjustment factor (**)	5,451,978,110	5,027,194,131
Conversion undertaken of convertible debt and other equity instruments	7,520,252	33,006,410
Adjusted weighted average number of outstanding ordinary shares	5,459,498,362	5,060,200,541
Earnings per share (€)	0.13	0.14
Basic earnings per share adjusted for		
mandatorily convertible bonds (€)	0.13	0.14
Diluted earnings per share (€)	0.13	0.14

(\*) A verage number of shares in circulation (million), excluding the average number of own shares held in treasury stock during the period.

(\*\*) Adjustment factor of the effects of the capital increase with preference rights applied to years prior to the issue.

During the first half of 2015 the bank carried out several capital increases. As laid out in IAS 33, after capital increases with rights, basic and diluted earnings per share must be recalculated. To do so, an adjustment factor must be applied to the denominator (weighted average number of shares outstanding). This adjustment factor is the result of the division of the fair value of each share immediately prior to the exercise of the preference subscription rights between the theoretical fair value ex-rights per share.

As of 31 December 2016 and 2015, there were no other share-based financial instruments or commitments to employees with a material impact on the calculation of diluted earnings per share for the periods presented. For this reason, basic earnings per share coincide with diluted earnings per share.

# Nota 4 – Financial risk management

# 4.1 Introduction

During 2016, Banco Sabadell Group has continued to strengthen its risk management framework, incorporating improvements which align it with the best practices in the financial sector.

Banco Sabadell Group has prepared a Strategic Risk Framework, the purpose of which is to ensure control and the proactive management of all of the Group's risks. This framework is set forth, amongst others, in the Risk Appetite Statement (RAS), which establishes the quantity and diversity of risks that the Group seeks and tolerates in order to achieve its business objectives, whilst maintaining a balance between return and risk.

The Risk Appetite Statement is comprised of quantitative metrics that allow an objective monitoring to be conducted on the risk management, as well as the qualitative aspects that complement such management.

Risk management and control is embodied in a broad framework of principles, policies, procedures and advanced valuation methods, forming an efficient decision-making structure within a risk function governance framework which is in line with Spanish and European regulations.

The principles, policies, procedures and methodologies framework is reflected in the document titled "Banco Sabadell Group risk policies", which is revised at least once a year. The Board of Directors is responsible for its approval. The document was last updated in January 2017.

For each significant risk of the Group, details are given of the main persons or units involved, their tasks, policies, methods and procedures, as well as control and monitoring mechanisms. Details are also given of Risk Function Organisation, indicating the roles and responsibilities of divisions and committees with regard to risks and risk control systems, adapted to the business units' activities, including loan and credit granting functions.

The main financial risks faced by Banco Sabadell Group companies as a result of their activity related to the use of financial instruments are credit risk, liquidity risk and market risk. Of these risks, credit risk is the most significant in the Group's portfolio.

The main non-financial risks faced by the Group are operational risk, tax risk and compliance risk.

When managing risks, the Group considers the macroeconomic and regulatory environments. The most significant aspects in 2016 are described hereafter:

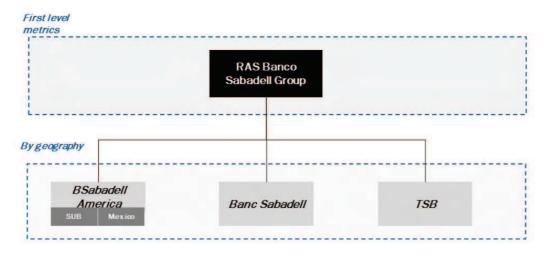

- During the first months of the year, there was significant volatility in financial markets in a situation in which oil prices declined to minimums not seen for more than a decade and in which concerns arose regarding China and, in general, the state of the world economy.
- Politics have increasingly taken centre stage throughout the year. Events which particularly stood out include the formation of a minority government in the second elections in Spain, the UK's decision to withdraw from the European Union, the victory of Republican candidate Donald Trump in the US presidential elections and Italy's referendum on Senate reforms.
- The growth of the global economy has remained at relatively reduced levels in a context of lower potential growth rates than those observed prior to the international financial crisis.
- Emerging economies have taken further steps in the deleveraging process.
- In the UK, the impact of Brexit on economic activity has been limited to date and has mainly affected the construction industry and, to a lesser extent, the manufacturing industry.
- The Spanish economy has performed extremely well, with an increase in GDP in excess of 3.0% and significant job creation.
- In Mexico, Trump's victory in the US led to a downward revision of future economic outlooks for the Mexican economy.
- Inflation has continued to be below the targets of the monetary policies in the main developed economies, although it has experienced an upturn in the final months of the year.

- The ECB has cut its deposit rate to -0.40%, and has increased the monthly rate of its asset purchases to €80 billion per month. In December, the duration of this programme was extended, although asset purchases returned to €60 billion per month.
- Bank of England introduced a significant stimulus package in August to offset the potential negative effects of Brexit (benchmark interest rate cuts, reactivation of the asset purchase programme, etc.).
- The Fed increased its Fed funds rate in December, to 0.50-0.75%, one year after the previous increase.
- Bank of Japan announced a significant change to the implementation of its policy, setting a target level for the long-term yield of Japanese government bonds.
- Yields of long-term government bonds in the United States and Germany have remained at reduced levels. The yield of 10-year German government bonds went so far as to reach negative figures for the first time in history. In the final months of the year, there was a general upturn in yields following Trump's victory, and due to expectations that the ECB will reduce its asset purchases and that the Fed will hike its Fed funds rates, amongst other reasons.
- Risk premiums in countries in the European periphery ended the year with higher figures than in the previous year, particularly Italy and Portugal, which have been affected by their domestic political situation and the situation of their financial systems, with the exception of the risk premium in Spain, which has performed relatively well.
- The sterling pound significantly depreciated against its main currency pairs as a result of uncertainty associated with holding the referendum on the UK's membership of the European Union and the referendum's subsequent outcome.
- The dollar appreciated against the euro, supported by growing expectations of a hike in the Fed funds rate.
- The European banking sector proved to be resilient to the main episodes of volatility in financial markets. Bank profitability still faces significant challenges related to the weak economic recovery, the lower-for-longer interest rate environment, asset quality issues and stringent regulatory requirements.
- In terms of the construction of Europe, no significant progress has been made to complete the Banking Union, although efforts have been made to accelerate the design and implementation of measures to develop the Capital Markets Union.
- Regulatory requirements have continued to be demanding, and banking activity has been conditional upon this.

# 4.2 Key milestones during the year

# Strengthening of the Strategic Risks Framework, giving it a greater deployment in terms of industry and geography

The Strategic Risk Framework of Banco Sabadell Group has been adapted to the new structure of the Group as a result of its internationalisation. It aims to ensure consistency and an effective deployment of the Group RAS across all geographies.

Thus, a first level is established which makes up the Group's RAS, setting overall objectives and limits, and a second level deploys the objectives and limits of the first level to different geographical regions.

During 2016, the Group has continued to strengthen its control environment by deploying the Strategic Risk Framework, thanks to the establishment of specific management and control frameworks intended for the management and control of risks linked to the financing of certain segments, sectors and geographies. These frameworks aim to set forth policies, tools and asset allocation in line with the type of risk and geography, aligned with the Group's Strategic Risk Framework.

Furthermore, during 2016, the Group has deployed the Strategic Risk Framework through tier two RAS metrics specific to each portfolio, in order to set objectives/limits for monitoring both existing, and with a particular focus on, new stock.

# Improvement of the Group's risk profile during the year

The Group's risk profile during 2016 has improved in five fundamental aspects:

- (i) Internationalisation: following the acquisition of British bank TSB in 2015, Banco Sabadell Group has strengthened its international diversification process in 2016, with a growth in its international exposure of €641 million. Most of this increase has taken place in regions such as the UK, the US and Mexico. This increases the weight of the Group's international portfolio to 31% of its credit portfolio.
- (ii) Concentration: reduction of both individual and sector-wide concentration risk. This is coupled with an improvement in the composition of the portfolio, with a reduction of over €1,733 million in the developer sector and increasing the exposure in sectors with higher credit quality.
- (iii) Price discrimination: risk-adjusted pricing system with a process for allocating costs, risk and capital, and at operation level, ensuring the oversight of the adjustment of prices to risks and incurred expenses.
- (iv) Reduction of problematic risk: intense reduction of problematic assets, in excess of €2,960 million, resulting in a higher growth than that considered in the targets set forth in the TRIple strategic plan and that observed by the Group's peers in the same period.
- (v) Establishment of specific management frameworks for each portfolio and constant improvements in credit risk management, incorporating lessons learned during the economic crisis with a particular focus on new entry.

The improvement in the Group's key aspects, particularly in terms of risk, is reflected in the overall improvement of the bank's senior debt rating by credit rating agencies in 2016 (see Directors' Report - Other significant information).

# Strengthening of risk governance and internal credit risk models

The strategic risk framework is part of a risk governance framework in line with both European and Spanish standards and regulations (specifically, the European Parliament Regulation, CRR 575/2013, and Directive CRD-IV and its transposition to Spanish law through Law 10/2014 on Organisation, Supervision and Solvency of Credit Institutions).

During 2016, the Group has continued to strengthen its risk control function, reorganising the structure to give it more independence.

During 2016, Banco Sabadell Group has strengthened the management framework of its internal credit risk models. Banco Sabadell Group has at its disposal risk control systems that have been adapted to the activities of the various business units in which it operates and to the risk profile that it wishes to accept. These control systems are under the framework of the procedures of acceptance, monitoring, mitigation and recovery of the aforementioned risks and are monitored in turn.

The risk assessment also forms part of the control framework and is established through advanced measurement methodologies. In this regard, the CRR and CRD IV set forth requirements relative to internal models to calculate minimum capital requirements, and Bank of Spain Circular 4/2016 sets forth requirements for the calculation of provisions using internal models. The basic principle of these regulations and their implementation in the bank consists of drawing up a closer link between own funds requirements and provisions through the use of internal models, using the real risks that have been incurred and the expectations of the possibility of their arising in the future. The bank has a system made up of three lines of defence to ensure the quality and monitoring of internal models, and a governance process specifically designed to manage and monitor these models and compliance with regulations and the Supervisor.

Banco Sabadell is aware that having an advanced methodology will allow the risks taken to be reliably valued and actively managed. It has been authorised to use the IRB (Internal Ratings Based) approach since 2008 and it promotes the development of the necessary aspects to complete its risk measurement systems and the applications deriving therefrom.

Some of the main bodies within the governance framework of internal risk models include the new Models Committee, which convenes on a monthly basis and strengthens the governance of internal credit risk models (risk management, regulatory capital and provisions), which is based on the following pillars:

- Effective management of changes to internal models.
- Recurring monitoring of the environment of internal models.
- Regular reporting, both internal and external.
- Internal models management tools.

# 4.3 General principles of risk management.

# 4.3.1 Corporate risk culture

The risk culture of Banco Sabadell Group is one of the factors that sets it apart, and it is firmly rooted throughout the organisation as a result of its progressive development spanning over decades. Among the aspects that characterise this strong risk culture are:

- A high level of involvement of the Board of Directors in risk management and control procedures. Even prior to 1994 there has been a Risk Control Committee in the bank, whose main task is to supervise the management of all relevant risks and to align these with the risk profile defined by the Group.
- A Basic Management Team as a key player in the acceptance and monitoring of risk. The team has existed for more than 20 years, and is formed of the account manager on one hand, and the risk analyst on the other. Risks are managed based on the points of view expressed by each party. Decisions must always be discussed and resolved by means of an agreement between all parties involved. All of the foregoing requires a high degree of involvement of the team in the decision-making process, and also contributes depth and solidity to the judgements.
- High degree of specialisation: specific management teams for each segment (Real Estate, Corporate Banking, Corporates, SMEs, Retailers, Banks and Countries, etc.) which allow a specialised risk management process to be implemented in each area.

- Advanced internal credit rating models that have served as a fundamental element of decision-making processes for over 15 years (since 1999 for individuals and since 2000 for corporates). The Group, in accordance with the relevant best practices, applies said practices in order to improve the general efficiency of the process. Insofar as these models not only allow borrowers to be organised in ordinal terms but also provide a basis for a quantitative risk measurement, and allow for their use in various key management processes: slight adjustments to the delegation of powers, efficient risk monitoring, Group-wide risk management, risk-adjusted returns and the Group's solvency assessment are just some examples.
- The delegation of powers for sanctioning corporate risk transactions at the various different levels is based on expected losses. As a general policy in respect of the delegation of powers, the Group has opted for a system in which different levels are determined using the expected loss metric, which takes into account the exposure to credit risk of the sanctionable transaction of the customer and their risk group, expected default rate and estimated severity.
- A rigorous monitoring of credit risk carried out in an advanced system of early warnings for corporates and individuals. The risk monitoring at customer and Group level can be divided into three types: operational, systematic and comprehensive. One of the key sources for this monitoring is the implementation of an early warning indicator system for both corporates and individuals (started in 2008 and 2011) which allows credit risk to be anticipated. These warnings are based on internal information such as, for example, the number of days past-due, overdrawn/exceeded credit lines, bank guarantees and international credit, as well as external information, such as customers classed as defaulters in the rest of the financial system or in information available from credit bureaux.
- An advanced abnormal risk management model that strengthens the anticipation and specialised management of risks. A comprehensive abnormal risk management model has been implemented which allows the treatment of risk to be directed to those situations where default is most likely (anticipated default, refinancing, collections, etc.). This comprehensive system uses specific tools (simulators to help determine the best solution in each situation), as well as managers who specialise in the different segments and who are dedicated exclusively to this task.
- Risk-adjusted pricing. The commercial policy in respect of price management is dynamic, and adapts to the economic and financial environment of the market (liquidity premiums, difficulty of accessing credit, interest rate volatility, etc.). It takes into account the cost of funding and the risk (expected losses and cost of capital). Risk models are a key element in setting prices and return objectives.
- The risk management model is fully integrated into the bank's technological platform, so that all policies can be immediately transferred for daily management: the policies, procedures, methodologies and models that make up the risk management model of Banco Sabadell are technically integrated in the bank's operational platform. This allows policies to be transferred immediately for an effective daily management. This element has been particularly relevant in the bank's acquisitions.
- Use of stress testing as a management tool: For years, Banco Sabadell has been using an internal tool to conduct stress tests, working together with internal teams with extensive experience in carrying out these tests.
- Banco Sabadell Group has a Strategic Risk Framework, which includes the Risk Appetite Statement, that guarantees control and proactive management of risks under a strengthened framework of corporate governance, which has been approved by the Board of Directors.

# 4.3.2 Strategic Risk Framework (Risk Appetite Framework)

The Strategic Risk Framework includes, amongst others, the Risk Appetite Statement, which is defined as the quantity and diversity of risks that Banco Sabadell Group seeks and tolerates in order to achieve its business objectives, whilst maintaining a balance between return and risk.

The Risk Appetite Statement (RAS) is composed of quantitative metrics which allow an objective monitoring to be carried out of the achievement of objectives and of established limits, and of qualitative elements that supplement these measures and govern the Group's risk control and management policy.

# Quantitative elements

The quantitative metrics of the RAS are divided into ten general areas:

- Capital and Solvency: level and quality of capital.
- Liquidity: liquidity buffers and financing structure.
- Return: balance between return and risk.
- Quality of Assets: for different significant risks and in stress scenarios.
- Credit and Concentration: on both a stand-alone and at sector-level.
- Market Risk
- Structural Interest Rate and Exchange Rate Risks
- Counterparty Risk
- Operational Risk

# Qualitative aspects

In addition to these quantitative metrics, the following qualitative principles should be used to guide the Group's risk management and control:

- The general position held by the entity with regards to risk-taking aims to achieve a medium-to-low risk profile through the use of a prudent and balanced risk policy that will ensure the profitable and sustainable growth of its activity, and that it is in line with the strategic objectives of the Group, in order to maximise the generation of value while guaranteeing an adequate level of solvency.
- The Board of Directors is committed to risk management and control procedures: approval of policies, limits, management model and procedures, as well as methodologies for risk measurement, monitoring and control.
- The Group maintains a risk culture that is embedded throughout the entity, and has various units that specialise in the treatment of different risks. The risk function conveys this culture by introducing policies, implementing and starting up internal models, and adapting these to the risk management procedures.
- The risk management policies and procedures are aimed at adapting the risk profile to the strategic risk framework, whilst maintaining a balance between the expected return and risk.
- The risk control and management system in Banco Sabadell Group is set up as an extensive framework of principles, policies, procedures and advanced assessment methodologies that are integrated into an efficient decision-making structure. The risk variable is taken into account when making any kind of decision, and is quantified in terms of allocated capital using a common measurement method.
- Risk management requires solid and continuous control procedures to keep risks within the predefined limits, with clearly defined responsibilities for identifying and monitoring indicators and early warnings, as well as an advanced risk assessment methodology.
- The levels of capital and liquidity should be sufficient to cover the risks accepted by the entity, including in unfavourable economic scenarios.
- There should not be any risk concentration levels that could significantly compromise own funds.
- The objectives behind accepting market risk for trading purposes is to handle the flow of transactions produced by customers' operations and to seize market opportunities, whilst maintaining a position in line with the bank's market share, risk appetite, capacities and profile.
- The risk function is independent, and senior management has a high degree of involvement that guarantees a strong risk culture focused on protecting and ensuring an appropriate return on capital.
- The Group's aim in terms of fiscal risk is to ensure compliance with fiscal obligations whilst guaranteeing an adequate return for shareholders.
- The achievement of corporate objectives should be sought in such a way that is compatible with the legal system at all times and by applying best practices.

- The entity will have at its disposal the necessary human and technological resources to monitor, control and manage all risks that may arise during the course of its activities.
- The Group's remuneration systems should align the interests of employees and Senior Management with the fulfilment of the Strategic Risk Framework.

# 4.3.3 General Organisation of the Risk Function

The Group has a risk culture that is embedded throughout all units, with units specialised in the treatment of risks, guaranteeing the independence of the risk function and a strong involvement of Senior Management.

The Board of Directors is the body responsible for setting forth general guidelines on the organisational distribution of risk management and control functions and for determining the main strategic lines in this regard. It is the body responsible for approving the Risk Appetite Framework (developed in cooperation with the Managing Director, the Chief Risk Officer and the Chief Financial Officer) and ensuring that it is aligned with the entity's short- and long-term objectives, as well as with the business plan, capital planning, risk capacity and compensation programmes.

There are four committees in the Board of Directors itself which are involved in risk management and control. The Bank also has several other Committees which take part in this function.

		Board of I RAS and risk man appro	agement policies		
Board	Risk Committee	Executive Committee	Audit and Co Committe		Appointments and Remuneration Committee
Committees related to risk management					
	Risk profile oversight and monitoring	<ul> <li>Approval of operations according to delegations</li> <li>Approval of asset allocation strategy</li> </ul>	Risk management systems, internal audit and internal efficiency monitoring		Retributive policy monitoring and alignment with Risk Appetite Framework
ain committees i	related to risk management				
ain committees i Technical Ris	, Assets and	CreditOperations	Asset Operations	Operational	Risk Institutional
		Credit Operations Committee	Asset Operations Committee	Operational Committe	

The Group establishes its Control Framework based on the model of Three Lines of Defence, structured around the following assignment of functions:

• First line of defence, consisting mainly of business units and corporate centres, among the most noteworthy of which are the Risk Management Division, the Financial Division and the Treasury and Capital Markets Division. The first line of defence is responsible for the management of risks inherent in the bank's activity, mainly in the acceptance, monitoring and assessment of risks and associated processes.

They are responsible for the implementation of corrective actions to correct deficiencies in their processes and controls. The functions attributed to this line under the control framework are:

- Maintaining effective internal controls and performing risk assessment and control procedures on a daily basis.
- Identify, assess, control and mitigate risks, following internal policies and procedures and ensuring that activities are consistent with the bank's targets and objectives.
- Establish adequate management and supervision processes to ensure regulatory compliance and focus on control errors, inadequate procedures and unexpected events.

- Second line of defence, consisting mainly of:
  - The risk control function is independent from the first line of defence and is responsible for assessing, monitoring and controlling the Group's significant risks and for providing information about such risks.
  - The internal validation function is responsible for reviewing these models and ensuring that they work as expected and that the results obtained from them are appropriate to their various uses, both internal and regulatory.
  - The Regulatory Compliance, Corporate Social Responsibility and Corporate Governance Divisions, which aim to minimise the possibility of regulatory breaches occurring and ensure that any breaches that occur are diligently identified, reported and resolved and that the appropriate preventive measures are implemented.
  - The IT Control Division is responsible for identifying risk situations associated with the use of technology across all units in the Group that may give rise to operational or reputation risks for the Group. It also promotes necessary training and support among the Group's units to enable them to resolve risk situations associated with their scope of responsibility and actions, and independently transfers any significant risks that have not been covered by the implemented controls to the Group's Operational Risk Division.

In general, the second line of defence ensures that the first line of defence is well designed, fulfils the functions assigned to it and puts forward suggestions for its continuous improvement. The core functions attributed to this line under the control framework are:

- Proposing the risk management framework.
- Guiding and ensuring the implementation of risk policies, defining responsibilities and objectives for their effective implementation.
- Verifying compliance with regulations applicable to the Group in the performance of its business activities.
- Providing the technological infrastructure for risk management, measurement and control.
- Analysing and comparing existing and future incidents by reviewing available information.
- Identifying changes in the underlying risk appetite of the organisation.
- Working with the management team to develop risk management processes and controls.

# • Third line of defence:

- The Internal Audit Division conducts an independent and objective verification and advisory activity, governed by a philosophy of adding value and helping the Group to fulfil its objectives.
- It provides assistance to the Group in meeting its objectives by providing a systematic, disciplined approach to evaluate the sufficiency and effectiveness of the organisation's governance processes and the risk management and internal control activities.

# 4.4 Managing and monitoring the main significant risks

# 4.4.1 Credit risk

Credit risk arises from the possibility of losses arising from defaults on payment obligations by borrowers, as well as losses of value due to the impairment of the borrowers' credit rating.

# 4.4.1.1. Credit risk management framework.

#### Credit risk control framework

Credit risk exposure is subjected to rigorous monitoring and control through regular reviews of borrowers' creditworthiness and their ability to meet their obligations to the Group, with exposure limits for each counterparty being adjusted to levels that are deemed to be acceptable. It is also normal practice to mitigate exposure to credit risk by requiring borrowers to provide collateral or other security to the bank.

The Board of Directors grants powers and discretions to the Executive Committee to allow the latter to delegate different parts of the decision-making process. The implementation of authority thresholds on credit approval management systems ensures that powers delegated at each level are linked to the expected loss calculated for each business loan or other transaction that is requested.

To optimise the business opportunities provided by each customer and to guarantee an appropriate degree of security, responsibility for monitoring risks is shared between the relationship manager and the risk analyst, who by maintaining effective communication are able to obtain a comprehensive view of each customer's individual circumstances.

The relationship manager monitors the business aspect through direct contact with customers and by handling their day-to-day banking, while the risk analyst takes a more system-based approach making use of their specialised knowledge.

The implementation of advanced methodologies for managing risk exposures (adapted to the New Basel Capital Accord (NBCA) and industry best practice) also benefits the process in ensuring that proactive measures can be taken once a risk has been identified. Of vital importance in this process are rating tools such as credit rating for corporate borrowers and credit scoring for retail customers, as well as early warning indicators for monitoring risk.

The analysis of indicators and early warnings, in addition to rating reviews, allows an integrated and continuous measurement to be made of the appropriateness of the accepted risk. The establishment of efficient procedures to manage outstanding risks also benefits the management of outstanding debt by enabling a proactive policy to be devised based on a preliminary identification of any cases with propensity to default.

The early warnings system allows an integrated measurement to be made of the level of the risk taken and allows it to be transferred to recovery management specialists, who will determine the different types of procedures that should be applied. Therefore, based on superior risks up to a certain limit and on the predicted default rates, groups or categories are identified for their individual treatment. These warnings are additionally managed by the business manager and the risk analyst.

# Abnormal risk management

Refinancing and restructuring processes are generally more relevant risk management techniques during the weaker stages of the economic cycle. The bank's objective, when faced by debtors and borrowers that have, or are expected to have, financial difficulties when meeting their payment obligations under the agreed contractual terms, is to facilitate the repayment of the debt by reducing the likelihood of non-payment to the minimum possible level. A number of common policies to achieve this are in place across the Group, including procedures for the approval, monitoring and control of debt refinancing and restructuring processes, the most relevant of which are the following:

- Having a sufficiently detailed compliance record for the borrower and a clear intention to repay the loan, assessing the time-frame of the financial difficulties experienced by the customer.
- Refinancing and restructuring conditions based on a realistic payment schedule which is in line with the borrower's current and predicted payment capacity, preventing problems from being postponed until a later date.
- If new guarantees are provided, these must be regarded as a secondary and exceptional source for recovering the debt, so as to avoid adversely affecting existing sources. All ordinary interest accrued must always be paid up to the refinancing date.
- Limitations of any lengthy grace periods.

The Group continually monitors compliance with current terms and conditions and with the above policies.

Banco Sabadell Group also has an advanced abnormal risk management model in place to manage the impaired assets portfolio. The purpose of managing abnormal risks is to identify the best solution for the customer of any symptoms of impairment, whilst reducing the default of customers with economic difficulties, ensuring smooth progression and consistent management across the different phases.

For further quantitative information, see section 4.4.1.6 of this note "Credit risk: refinancing and restructuring operations".

#### Real estate credit risk management

As part of its ongoing risk management and, in particular, its policy on the construction and real estate industries, the Group has a number of specific policies for mitigating risks.

The main measure being implemented is continuous monitoring of risks and the reappraisal of borrowers' continued financial viability in the new economic environment. If the position is satisfactory, the existing arrangements continue on the basis agreed, with new commitments being required where appropriate in light of changed circumstances.

The policy to be applied depends in each case on the type of asset being financed. For completed developments, sale support actions are carried out through the group's distribution channels, setting a competitive price which enables the transactions to be activated and allowing final buyers access to financing, provided they comply with risk requirements. For works in progress, the main objective is to complete the work, provided that short and medium term market expectations are sufficient to absorb the resulting supply of dwellings.

For land-related loans, the saleability of properties to be built on the site is the key consideration in deciding on the provision of finance for construction.

Where monitoring and scrutiny of a borrower's position do not indicate a reasonable degree of viability, the solution may take the form of a surrender of assets in settlement of the debt and/or the purchase of assets.

Where a solution of this kind is not practicable, legal proceedings will be taken, leading to the foreclosure of the assets.

All assets taken into possession by the Group, whether through the transfer of debt, purchase, or as a result of legal proceedings, to ensure collection or to execute other lending improvements are mainly foreclosed tangible assets received from borrowers and other obligors of the bank, to satisfy financial assets representing the bank's collection rights, and are actively managed with the primary purpose of divestment.

In terms of the degree of maturity of real estate assets, three strategic lines of action have been established:

#### 1. Trading:

Different trading mechanisms are in place for the sale of the final product (households, retail properties, warehouses, parking spaces, etc.) in the different distribution channels and agents, which change according to the type, condition and location. The real estate portal www.solvia.es is a fundamental factor in this strategy.

#### 2. Mobilisation:

Given the very difficult conditions surrounding the sale of building plots and buildings under construction, a mobilisation strategy has been adopted whose aim is to generate liquidity from building plots. A number of mobilisation schemes have been launched:

- Collaboration with real estate developers: this seeks to make building land available in areas of high housing demand and allow developers to develop and sell properties.
- Investor programme: the aim of this is to develop sites for office, commercial and industrial use with capital inputs from investors.
- Council housing programme: this involves developing council housing units to be leased out and subsequently sold.

#### 3. Urban planning management:

Land that is not yet ready for development must be managed to secure development rights. This is vital as a means of leveraging the value of the sites and is key to any subsequent development and sale.

In the case of new financing for construction and real estate development, a series of criteria adapted to the specific type of business is established, mainly to the different stages of the maturity of the project and the market situation. Additionally, there is a monitoring process for this type of specialised risk, managed by business and risk experts who manage the different alerts established, and the customer's behaviour in the different financing stages, so as to ensure that when the facilities granted are drawn down, this is done in

parallel to developments in the building works.

The Group, due to having previously reached a high concentration of this risk, has a first level RAS metric which establishes a maximum level of concentration in terms of concentration metric for real-estate promotion based on TIER1 in Spain. This metric is monitored on a monthly basis, and it is reported to the Technical Risks Committee, the Risk Committee and the Board of Directors.

Lastly, it is worth highlighting that the Risk Control Division, together with the Business and Risk divisions, regularly monitors the adequacy of new financing granted to the RE developer, as part of which compliance with policies, as well as asset allocation, is reviewed. This monitoring is escalated to the Technical Risks Committee for their information.

For further quantitative information, see section 4.4.1.7 of this Note "Credit risk: Risk concentration, exposure to construction and real estate sectors".

## 4.4.1.2. <u>Risk management models</u>

# Credit rating

Credit risks incurred with corporates, developers, specialised lending projects, financial institutions and countries, are rated using a rating system based on predictive factors and an internal estimate of the probability of default.

The rating model is reviewed annually based on the analysis of behavioural patterns of defaulted loans. A predicted default rate is assigned to each internal credit rating level, which also allows a homogeneous comparison to be made of other segments and credit ratings from external credit agencies through a master ratings scale.

	Breakdown of BS corporates portfolio											
9	8	7	6	5	4	3	2	1	0	TOTAL		
1.87%	10.91%	17.76%	20.35%	26.99%	14.24%	5.71%	1.72%	0.34%	0.11%	100%		

#### Credit scoring

In general, credit risks undertaken with individual customers are rated using scoring systems which are in turn based on a quantitative model of historic statistical data, where the relevant predictive factors are identified. In geographies in which scoring takes place, the latter is divided into two types:

Behavioural scoring: the system automatically classifies customers based on information regarding their activity and on each product. These scores are mainly used in: authorisation of transactions, setting (authorised) overdraft limits, advertising campaigns, monitoring and segmentation of claims and/or reimbursement procedures.

Reactive scoring: this is used to evaluate applications for personal loans, mortgage loans and credit cards. Once all the data of the transaction has been introduced, the system calculates a result based on the estimated creditworthiness, financial profile and, if applicable, the level of pledged assets.

If no scoring system exists, it is replaced with individual assessments supplemented with policies.

Breakdown by rating of individuals portfolio											
9	8	7	6	5	4	3	2	1	0	τοται	
1.48%	8.76%	8.65%	22.06%	26.92%	21.55%	9.49%	0.82%	0.12%	0.13%	1009	

0/

## Warning tools

In general, Banco Sabadell Group has a system of early warnings comprised of both individual warnings and advanced early warning models in place for both the Corporates sector and the Individuals sector. These early warnings are based on indicators obtained from available sources of information (rating or scoring, customer files, balance sheets, CIRBE (Bank of Spain Central Credit Register), information of a sector or operative, nature, etc.). They measure the risk presented by the customer on a short-term basis (predicted propensity to default), obtaining a high level of predictability to detect potential defaulters. The rating, which is obtained automatically, is a basic data input used when monitoring the risk of corporate and individual customers.

This warnings system offers:

- Improved efficiency when monitoring customers with the lowest rating (different cut-off points for each group).
- Foreseeable actions to manage any negative change in the situation of the customer (change in rating, new severe warnings, etc.).
- Regular control of customers whose situation remains unchanged and who have been evaluated by the Basic Management Team.

#### 4.4.1.3. Credit risk exposure

Financial assets exposed to credit risk by portfolio, type of counterparty and instruments, and areas in which the risks generated are, at the end of each year, those shown below by their carrying value, representative of the highest level of exposure to the credit risk incurred, inasmuch as they reflect the highest level of debt of the borrower at the date to which they refer.

Thousand euro		2016			2015

The Group also maintains guarantees and contingent commitments with borrowers, materialised by the establishment of guaranties provided or commitments inherent in the credit agreements up to an availability level or limit ensuring financing for the customer when required. These facilities also imply the acceptance of credit risk and are subject to the same management and monitoring systems described above.

Information on the value of financial guarantees given at 31 December 2016 and 2015 year-end is shown below:

	2016	2015
Loan commitments given	19,567,289	19,306,331
Of which classified as doubtful	-	-
Amount recorded under liabilities on the balance sheet	23,160	-
-inancial guarantees given (*)	1,878,608	1,834,870
Of which classified as doubtful	42,507	53,254
Amount recorded under liabilities on the balance sheet (**)	35,382	45,259
Other commitments given	6,650,746	6,521,297
Of which classified as doubtful	61,632	36,573
Amount recorded under liabilities on the balance sheet	25,490	68,420

(\*) Of which 89 and 514 million euros in December 2016 and 2015 granted in relation to construction and real estate development (\*\*) Of which 2 and 43 million euros in December 2016 and 2015 recorded under liabilities on the balance sheet in relation to real estate development

The credit risk exposure described above includes the amount of collateral and other credit enhancements to ensure compliance, which are commonly used in the types of financial instrument managed by the entity.

#### 4.4.1.4. Credit risk mitigation

Credit risk exposure is subjected to rigorous monitoring and control through regular reviews of borrowers' creditworthiness and their ability to meet their obligations to the Group, with exposure limits for each counterparty being adjusted to levels that are deemed to be acceptable. It is also normal practice to mitigate exposure to credit risk by requiring borrowers to provide collateral or other security to the bank.

Generally, these take the form of financial collateral, mainly mortgages on properties used as housing, whether finished or under construction. The entity also accepts, although to a lesser degree, other types of financial collateral, such as mortgages on local properties, industrial warehouses, etc., and financial assets. Another credit risk mitigation technique that is commonly used by the entity is to accept guarantees, in this case subject to the guarantor presenting a contrasted certificate of good standing.

All of these mitigation techniques are established ensuring their legal enforceability, i.e. under legal contracts that are legally binding for all parties and which are also enforceable in all relevant jurisdictions, thus guaranteeing that the collateral can be seized at any time. This process is fully subject to an internal verification of the legal adequacy of these contracts, and legal opinions of international specialists can be requested and applied where these contracts have been created under foreign legislation.

Collaterals are formalised before a notary public through a public document, thus ensuring their enforceability before third parties. For property mortgages, these public documents are also registered with the corresponding land registries, thus gaining constitutional weight before third parties. In the case of pledges, the pledged goods are regularly deposited in the entity. Unilateral cancellation by the debtor is not permitted, and the guarantee shall remain valid until repayment in full of the debt.

The personal guaranties or bonds are established in favour of the entity and, except in certain exceptional scenarios, are also formalised before a notary public via a public document, to vest the agreement with the highest possible legal security of formalisation and to allow legal claims to be submitted through executive proceedings in case of non-payment. They constitute a credit right with respect to the guarantor that is irrevocable and payable on first demand.

In addition to the mitigation of the risk derived from the guarantees formalised between the debtors and the entity as a result of the acquisition of Banco CAM, the Group has an additional guarantee for a particular asset portfolio, provided by the APS, with retroactive effects from 31 July 2011, and for a period of ten years (see further details in Note 2).

The bank has not received significant guarantees which it is authorised to sell or pledge, irrespective of any non-payment by the owner of the referred guarantee, except for those intrinsic to treasury activities, which are mostly repos with maturities of no more than three months, therefore their fair value does not differ substantially from their carrying value (Note 6). The fair value of the assets sold with a buyback agreement derived from the repurchase agreements is included under the heading "*Financial liabilities held for trading*", under short securities positions.

Conversely, transferred assets from the same operation amount to €855,145 thousand and are included in line with their nature under temporary transfers in Notes 19 and 20.

The breakdown of the heading "Loans and advances - Customers" by activity and guarantee, excluding advances not classed as loans, at 31 December 2016 and 2015, respectively, is as follows:

Thousand euros				201	6

In terms of risks with LTV >80%, which mainly correspond to operations from acquired institutions or business operations in which, as a supplement to the valuation of the operation, a mortgage guarantee is available for its coverage. Similarly, there are other additional reasons for approval, which mainly respond to solvent borrowers with proven payment capacity, as well as customers with a good profile who contribute additional guarantees (personal and/or pledged) to the mortgage guarantees already considered in the LTV ratio.

Statutory information

The value of the collateral received to ensure collection, broken down into financial guarantees and other collateral, at 31 December 2016 and at 2015 year-end, are as follows:

Thousand euro		
Guarantees received	2016	2015
Value of collateral	87,667,577	88,011,916
Of which: guarantees doubtful risks	4,500,350	6,472,226
Value of other collateral	8,911,554	8,625,811
Of which: guarantees doubtful risks	485,640	386,881
Total value of guarantees received	96,579,131	96,637,727

The main concentration of risk in relation to all these types of financial guarantees and credit improvements corresponds to the use of the mortgage guarantees as a credit risk mitigation technique in exposures of loans, for use in the financing or construction of housing, or other types of real estate. In relative terms, the exposure secured with mortgages represents 66.1% of the overall gross investment.

In the case of market operations, in line with general trends, Banco Sabadell Group also provides rights and contractual compensation (netting) agreements with all financial counterparties with which derivative instruments, and some collateral agreements (CSA) are contracted, in order to mitigate the exposure to credit risk and avoid excessive concentrations.

The following table shows the aggregate amount reflected on the balance sheet for the financial instruments subject to a master netting and collateral agreement for the years 2016 and 2015:

Thousand euro			016 Amounts disclos the statemen posi	t of financial

The guarantees deposited at Banco Sabadell as collateral at the closing of 2016 amounted to €131 million (€218 million at the closing of 2015).

The amounts of derivative financial instruments which are settled through a clearing house represent €348,850 (€58,225 at the end of 2015), corresponding to financial assets and €293,150 euros (€84,911 thousand euros at the end of 2015) corresponding to financial liabilities.

The notional amount of derivative financial instruments accounted at 31 December 2016 stands at 164.277 million euros (143,297 million euros at end of 2015), of which 2,195 million euros correspond to operations with organised markets (1,720 million euros at end of 2015) and 133,379 million euros (115,313 million euros at close of 2015) correspond to OTC operations, of which 25,140 million euros are settled through clearing houses (10,450 million euros at end of 2015).

#### 4.4.1.5. Credit quality of financial assets

As stated earlier, in general terms, the Group uses internal models to rate most borrowers (or transactions) through which credit risk is incurred. These models have been designed considering the best practices proposed by the NBCA. However, not all portfolios in which credit risk is incurred use internal models, partly due to the fact that a minimum level of experience in cases of non-payment is required for their reasonable design. Therefore, in order to best describe the quality of the portfolio from an overall perspective, the following chart uses the rating system of Bank of Spain to analyse the Group's credit risk exposure and to estimate the hedging requirements due to impaired values of debt instrument portfolios.

%		
Credit quality of financial assets	2016	2015
Without negligible risk	28	29
Low risk	24	25
Medium-low risk	13	11
Medium risk	32	29
Medium-high risk	2	5
High risk	1	1
Total	100	100

The (original) percentage exposure, calculated using internal models, in terms of solvency for the bank is 52.12 %.

The breakdown of the exposure, rated based on the internal rating levels, is as follows:

Distribution of exposure by	Risk assigned rating	/scoring
rating	2016	2015
AAA/AA	5	5
А	14	12
BBB	55	56
BB	20	19
В	5	7
Resto	1	1
Total	100	100

Does not include operations derived from TSB, or individuals' operations from Banco Cam, BMN-Penedès, Banco Gallego and Sabadell Solbank (formerly Lloydsbank).

During 2016 an improvement has been noted in the reduction of doubtful assets, which have been reduced by 2,814 million euros in 2016, with a NPL ratio as shown in the table below.

	2016	2015
NPL ratio (*)	6.14	7.79
NPL coverage ratio (*)	51.55	53.64

(\*) The NPL ratio excluding TSB stands at 7.72 and the NPL coverage ratio at 51.53 (in 2015, 9.86 and 53.1).

The NPL ratio, broken down by financing segment, is set out below:

		Proforma		Proforma	
	4Q15	2Q16 (*)	2Q16	4Q16 (*)	4Q16
Real-estate development and construction	38.71	33.29	33.21	29.05	28.98
Non-real-estate construction	14.35	11.76	11.75	9.68	9.67
Companies	4.62	3.89	3.89	3.82	3.82
SMEs and independent contractors	10.76	9.39	9.33	8.47	8.42
Private individuals with 1st mortgage guarantee	4.71	7.47	4.56	7.25	4.36
BS Group NPL ratio	7.79	8.54	6.83	7.72	6.14

(\*) Corresponds to the NPL ratio excluding the addition of TSB.

Further information of the quantitative breakdown of coverage and doubtful assets is included in Note 11 to these consolidated annual accounts.

0/

The value of the collateral received to ensure collection associated with refinancing and restructuring operations, broken down into collateral and other guarantees, at 31 December 2016 and 2015 year-end, are as follows:

Value of other guarantees Of which: guarantees doubtful risks	653,986 250,968	195,667
value of other guarantees	653,986	752,003
	050.000	750.000
Of which: guarantees doubtful risks	2,621,019	3,082,379
Value of collateral	5,817,830	8,453,534
Guarantees received	2016	2015

Detailed movements of the refinancing and restructuring balance and associated provisions during 2016 and 2015 are as follows:

	2016	2015
Opening balance	14,816,307	15,961,422
Addition of TSB	-	596,000
(+) Refinancing and restructuring in the period	1,687,111	2,309,180
Memorandum item: impact recorded on the income statement for the period	89,471	293,281
(-) Debt amortisations	(1,790,243)	(1,017,792)
(-) Foreclosure	(551,942)	(945,528)
(-) Derecognised from the balance sheet (reclassified as write-off)	(175,353)	(237,161)
(+)/(-) Other changes	(4,722,175)	(1,849,814)
Balance at the end of the year	9,263,705	14,816,307

(\*) Includes operations which are no longer identified as refinancing, refinanced or restructured, due to complying with requirements for their reclassification from standard exposure subject to special monitoring to standard exposure (see Note 13.4).

The table below shows the value of operations which, after refinancing or restructuring, have been classified as doubtful during 2016 and 2015:

Thousand euro		
	2016	2015
Central governments	707	5,964
Other corporate borrowers and individual entrepreneurs	444,792	571,709
Of which: Finance for construction and real estate development	124,975	149,605
Other individual borrowers	349,306	268,057
Total	794,805	845,730

The average probability of default of current refinancing and restructuring operations per activity at 31 December 2016 and 2015 is as follows:

	2016	2015
Central governments (*)	-	-
Other corporate borrowers and individual entrepreneurs	11	10
Of which: Finance for construction and real estate development	12	12
Other individual borrowers	12	11
Total	11	10

(\*) Authorisation has not been granted for the use of internal models in the calculation of capital requirements. Average probability of default calculated at September 2016.

## 4.4.1.7. Concentration risk

Concentration risk refers to exposures whose risk of incurring losses is great enough to pose a threat to the financial solvency of the entity or the feasibility of its ordinary business activities. This risk is divided into two basic sub-types:

- Individual concentration risk: imperfect diversification of the idiosyncratic risk within the portfolio due to either its reduced size, or due to significant exposures in specific customers.
- Sector concentration risk: imperfect diversification of systematic components of risk within the portfolio, which can be sector-based factors, geographical factors, etc.

In order to efficiently manage concentration risk, Banco Sabadell has a series of specific tools and policies in place:

- Quantitative metrics from the Risk Appetite Statement and their subsequent monitoring, such as level one metrics.
- Individual limits of risks or customers considered significant by the Executive Committee.
- Delegations that ensure that all transactions carried out by the most important customers are approved by the Credit Operations Committee or even the Executive Committee.

#### 4.4.1.7.1.Exposure to customers or significant risks

At 31 December 2016 there were no borrowers with a ceded risk that individually exceeded 10% of the Group's equity.

## 4.4.1.7.2.Country risk: geographic exposure to credit risk

Country risk is that applicable to the debts of a country, globally considered as a result of reasons inherent in the sovereignty and the economic situation of a country, i.e. for circumstances other than the regular credit risk. It manifests itself in the eventual inability of a debtor to meet their foreign currency payment obligations with external creditors due to, among other reasons, the country not permitting access to that foreign currency, the inability to transfer it, the ineffectiveness of legal actions against borrowers for reasons of sovereignty, or for reasons of war, expropriation or nationalisation.

Country risk not only affects debts contracted with a state or entities guaranteed by it, but the entire group of private debtors forming part of that state and which for reasons outside of their own control or decision, are generally unable to pay off their debts.

There are no significant restrictions (such as statutory, contractual and regulatory restrictions) on the ability to access or use assets and settle liabilities of the Group provided that the entity complies with regulatory requirements set forth in each country, and no restrictions of any other type considered in IFRS 12.

An overall exposure limit is set for each country and this applies across the whole Banco Sabadell Group. These limits are approved by the Executive Committee and the corresponding decision-making bodies, depending on the powers delegated to them, and are continuously monitored to ensure that any deterioration in the political, economic or social situation in a country can be detected in good time.

The principal component of the framework for the acceptance of country risk and financial statement risk is the limits structure for different metrics. Based on this structure, the monitoring of the different risks is carried out by Senior Management, and the delegated bodies establish the Group's risk appetite.

The limits structure is based on two levels: first level metrics in the Risk Appetite Statement and second level limits or management.

Additionally, different indicators and tools are used to manage country risk: ratings, CDS, macroeconomic indicators, etc.

The breakdown of risks by activity and at global level at 31 December 2016 and 2015 is as follows:

Thousand euro			2016		
			2016 Rest of

(\*\*) Includes those available under credit transactions and other contingent risks (657 million euros at 31De (\*\*\*) Relates to commitments for cash purchases and sales of financial assets.

#### 4.4.1.7.4.Exposure to construction and real estate sectors

Details of financing intended for construction and real estate development and its coverage are as follows: The classification of the credit which is presented has been defined in accordance with the purpose of the credits, and not with the debtor's National Classification of Economic Activities (CNAE). This implies, for example, that if a debtor belongs to: (a) a real estate company, but uses the financing granted for a purpose other than real-estate construction or promotion, it is not included in this table; and (b) a company whose principal activity is not construction or real estate, but the credit is used for the financing of properties intended for real-estate promotion, it is included in the same table:

	2016						
	Gross carrying amount	Of which: APS (**)	Excess value of the collateral	Of which: APS (**)	Impairment adjustments (***)		
Finance for construction and real-estate development (including land)(business in Spain) (*)	7,762	3,008	2,602	1,301	1,183

## 4.4.1.8. Counterparty risk

Under this heading, credit risk arising from activities in financial markets that are carried out through specific counterparty operations is considered (derivatives and operations with repurchase agreements), operations in money markets and fixed income operations. In this manner, an integral management and monitoring of the exposure is carried out, as a result of the activity in financial markets.

The exposure resulting from activity in financial markets under management criteria is mainly concentrated in financial institutions (FI) and Central Counterparty Clearing houses (CCP).

The following two tables show the distribution of exposure by rating and the Group's geographies.

%																
	AAA	AA+	AA	AA-	A+	А	A-	BBB+	BBB	BBB-	BB+	BB	BB-	B+	No rating	
	2.30	0.39	2.17	6.44	37.27	16.66	8.94	12.54	5.11	3.04	1.22	2.24	0.00	0.42	1.26	100.00
%																
															20	016
Eu	ro Zone	e														50.42
Re	st of Eu	irope														35.75
U.S	S.A and	Canad	а													13.33
Re	st of th	e World	k													0.50
То	tal														:	100.00

As can be seen in the table, the risk in concentrated into counterparties with a high credit quality rating, with 65% of the risk with counterparties with a rating equal to or higher than A.

In June 2016, under EMIR (Regulation 648/2012), the obligation to clear and settle certain OTC derivatives through Central Counterparty Clearing houses (CCP) became applicable to the Group. For this reason, the derivatives subscribed by the Group susceptible to being cleared through a CCP are channelled via these agents. At the same time, the Group has strengthened the standardisation of OTC derivatives with a view to increasing the use of CCPs. The exposure through CCPs is equivalent to the amount of the guarantees deposited.

With regard to derivatives transactions in organised markets (OM), in line with management criteria, it is deemed that there is no exposure, given that there is no risk as the OMs act as a counterparty in the transactions, and due to having clearing and guarantee mechanisms, this ensures the transparency and continuity of the activity. As in the case of CCPs, the exposure is equivalent to the deposits guaranteed.

The philosophy behind counterparty risk management is in line with the business strategy, and seeks to ensure value creation whilst maintaining a balance between profitability and risk. For this purpose, supervision and counterparty risk criteria has been established, deriving from activity in financial markets, which ensures that the bank can carry out its business activity whilst respecting the risk thresholds established by Senior Management.

The methodology used to quantify the exposure is Mark to Market (hereinafter, MtM), plus Add-on. MtM represents current exposure, and is defined as the cost of substituting a transaction at market value in the event that a counterparty defaults. Add-on represents a potential future risk, which an operation could reach in a certain period, due to the characteristics of the operation and the variables of the market it depends on. In the case of transactions under a collateral agreement, add-on represents the possible fluctuation of MtM between the time of default and the close of the position in the market. If the transaction is not carried out through a collateral agreement, it represents the possible fluctuation of MtM throughout the life of the operation.

Each day at market close all of the exposures are recalculated in accordance with the entry and exit flows of transactions, in line with the changes in market variables and the risk mitigation mechanism established by the Group. In this manner, the exposures are subjected to daily monitoring and are controlled in accordance the limits approved by Senior Management. This information forms part of the risk reports which are escalated to the divisions and areas responsible for the management and monitoring of the same.

With regard to counterparty risk, the Group adopts three different mitigation measures. The main measures are:

- Netting agreements for derivatives (ISDA and CMOF).
- Collateral agreements for derivatives (CSA and Annex III) and in repos (GMRA).

Netting agreements allow positive and negative MtM to be aggregated with the same counterparty, in such a way that in the event of default, a single payment or collection obligation is established in relation to all of the operations closed with this counterparty.

By default, the Group has netting agreements with all of the counterparties that wish to operate in derivatives.

Collateral agreements, as well as including the netting effect, also include the periodic exchange of guarantees which mitigate the exposure with a counterparty in respect of the operations subject to such agreement.

In order to operate in derivatives or repos with financial institutions, the Group has established the requirement of having a collateral agreement. The Group's standard collateral contract is bilateral (that is to say, both parties are obliged to deposit collateral), and with a daily exchange of guarantees, always in cash and always denominated in euro.

## 4.4.1.9. Assets pledged in financing activities

At the end of 2016 and 2015, there are certain financial assets pledged in financing operations, i.e. offered as collateral or guarantees for certain liabilities. These assets correspond mainly to loans linked to the issue of mortgage covered bonds, territorial bonds or long-term securitisation bonds (see Note 21 and Schedules III and IV). The remaining pledged assets are debt securities which are submitted in operations of assets sold under repurchase agreements, pledged collateral (loans or debt instruments) to access certain financing operations with central banks and all types of collateral provided to guarantee derivatives.

Information on loans secured with mortgage guarantees included in the "*Loans and advances - Customers*" portfolio and which are linked to the issue of mortgage covered bonds pursuant to the Mortgage Market Law is included in Schedule III on "Policies and procedures on the mortgage market", a special accounting record of issuing entity Banco Sabadell, required by Bank of Spain Circular 5/2011, implementing Royal Decree 716/2009, of 24 April (implementing certain aspects of Law 2/1981 of 25 March on the regulation of the mortgage market).

The bank has used part of its loans and advances portfolio and similar credit in fixed-income securities by transferring assets to various securitisation funds created for this purpose. Under current regulations, securitisations where there is no substantial risk transfer cannot be derecognised from the balance sheet.

The balance of the financial assets securitised under these programmes by the Group, identifying those in which the risks and associated profits have been transferred, is as follows:

	2016	2015
Derecognised in full from the balance sheet	1,200,421	1,390,427
Securitised mortgage assets	294,998	358,803
Other securitised assets	19,332	20,630
Other financial assets transferred	886,092	1,010,994
Retained in full on the balance sheet:	17,873,959	15,943,390
Securitised mortgage assets	16,911,366	15,788,059
Other securitised assets	962,593	155,331
Other transfers to credit institutions	-	-
Total	19,074,380	17,333,817

The assets and liabilities associated with securitisation funds of assets originated after 1 January 2004, and for which inherent risks and benefits have not been transferred to third parties, have been maintained in the consolidated financial statements. In terms of the assets shown, the risk is not transferred as some form of subordinated financing or credit improvement has been transferred to the securitisation funds.

Within the heading of other transferred financial assets fully derecognised from the balance sheet, it mainly included assets transferred to SAREB by Banco Gallego, as they continue to be administered by the entity. These assets amount to €698,084.

Details of Securitisation Funds are included in Schedule II.

## 4.4.2 Liquidity risk

### 4.4.2.1. Description

Liquidity risk arises due to the possibility of losses being incurred as a result of the Bank's being unable, albeit temporarily, to honour payment commitments due to a lack of liquid assets, or of its being unable to access the markets to refinance debts at a reasonable cost. This risk may also arise from factors of a systemic nature or specific to the Bank itself.

The Group is exposed to daily demands on its available cash resources to meet contractual obligations related to financial instruments with which it trades, such as maturing deposits, drawdowns of credit facilities, settlements of derivatives, etc. Experience shows, however, that only a minimum amount is ever actually required and this can be predicted with a high degree of confidence.

In this regard, the objective of Banco Sabadell Group is to maintain liquid assets and a financing structure that, in line with its strategic objectives and based on its Risk Appetite Statement allows it to fulfil its payment commitments normally and at a 'reasonable cost', under business-as-usual conditions or under a stress situation caused by systemic and/or idiosyncratic factors.

The governance structure in terms of Banco Sabadell's liquidity management is based on the direct involvement of Senior Management, the clear-cut definition of the Three Lines of Defence and a strict separation of functions and a clear structure of responsibilities in Committees, Divisions, General Sub-Divisions and functional areas.

The involvement of the entity's Senior Management in managing and controlling liquidity risk entails the involvement of the Board of Directors, as the highest governing body of the institution, and also the direct involvement of its three delegated committees:

- Executive Committee.
- Risk Committee.
- Audit and Control Committee

These governing bodies receive regular information from all departments associated with liquidity risk management and control, through the various Committees and/or Divisions/General Sub-Divisions.

### 4.4.2.2. <u>Liquidity management</u>

Banco Sabadell's liquidity management seeks to ensure funding for its commercial activity at an appropriate cost and term while minimising liquidity risk. The bank's financing policy is focused on maintaining a balanced funding structure, based mainly on customer deposits, and supplemented with access to wholesale markets that allows the Group to maintain a comfortable liquidity position at all times.

The Group follows a structure based on Liquidity Management Units (UGLs, for their acronym in Spanish) to manage its liquidity. Each UGL is responsible for managing its own liquidity and for setting its own metrics to control liquidity risk, in coordination with the Group's corporate functions. Currently, the UGLs are Banco Sabadell (includes OFEX), Sabadell United Bank (SUB), Banc Sabadell d'Andorra (BSA) and TSB.

In order to achieve objectives, the Group's current liquidity risk management strategy is based on the following principles and pillars, in line with the UGLs' retail business model and the defined strategic objectives:

- The involvement of the Board of the Directors and Senior Management in the management and control of the liquidity and funding risk.
- Clear segregation of functions between the different areas within the organisation, with a clear-cut definition of the three lines of defence, to give a degree of independence when evaluating positions and when controlling and assessing risks.
- Decentralised liquidity management system for the more significant units but with a risk oversight and management system at a centralised level.
- Sound identification, measurement, management, control and reporting processes on the different liquidity and funding risks to which the Group is exposed.
- Existence of a transfer pricing system to transfer the cost of funding.
- Balanced funding structure largely based on customer deposits.
- Ample base of unencumbered liquid assets that can be accessed immediately to generate liquidity and which comprises the first line of defence of the Group.
- Diversification of sources of funding, with controlled use of short-term wholesale funding without having to depend on individual fund suppliers.
- Self-funding by the main banking subsidiaries outside of Spain.
- Oversight of the degree of encumbrance of the balance sheet.
- Maintenance of a second line of liquidity that includes the capacity of issuing covered bonds and territorial bonds.
- Availability of a Liquidity Contingency Plan.

With respect to TSB, although ring-fencing will not officially enter into effect until 2019, TSB is an autonomous unit within the Group's liquidity management as it is an independent UGL. The future economic performance of the United Kingdom should not generate liquidity problems, as TSB operates independently from its parent company.

#### Tools/metrics for monitoring and control of risk management

Banco Sabadell Group defines two series of metrics that allow it to measure and control its liquidity risk: 1) first-tier RAS metrics and 2) second-tier metrics. Liquidity risk is also monitored and controlled on a daily basis through the early warning indicators (EWI) system and the Structural Treasury Report.

The Board of Directors of Banco Sabadell is responsible for defining the Group's liquidity and funding risk appetite statement (RAS) at consolidated level and for setting indicators that UGLs must include in their local RAS, even if they include other additional indicators.

The RAS is comprised of quantitative metrics that allow an objective monitoring to be conducted on the risk management, as well as the qualitative aspects that complement such management.

The Board of Directors of UGLs are responsible for approving local RAS in which corporate guidelines and their respective local requirements must be taken into consideration. Aside from the metrics included in the Risk Appetite Framework, each UGL defines a set of second-tier metrics which contribute to the assessment and monitoring of the funding and liquidity risk. These metrics are monitored continuously in each of the local ALCOS.

Lastly, it should be mentioned that the Group has designed and implemented an early warning indicators (EWIs) system at the UGL level, which includes market and liquidity indicators adapted to the funding structure and the business model of each UGL. The deployment of these metrics at UGL level complements the RAS indicators and second-tier metrics and allows local threats to the liquidity position and funding structure to be detected early, thereby facilitating the decision-making process and implementation of corrective actions and reducing the risk of contagion between the different management units.

These warnings are broken down into different levels of severity based on which the Group must consider taking different corrective measures and actions in order to return to a BaU situation. The early warning system is linked to the Liquidity Contingency Plan (LCP).

Banco Sabadell has an LCP in place, which sets forth the strategy for guaranteeing that the institution has the sufficient management capacities and measures in place to limit any negative impacts of a crisis scenario affecting its liquidity position and to allow it to return to a business-as-usual situation. The LCP also aims to facilitate operational continuity in the management of liquidity, particularly in the event that the crisis has arisen due to a flawed performance of one or more market infrastructures. The LCP can be activated in response to different crisis scenarios of either the markets or the entity itself. In general, and in line with the impact channels considered in the entity's stress tests, these scenarios can be classed as systemic crises, idiosyncratic crises or combined crises.

The risk control and reporting framework for the liquidity risk management limits is comprised of:

- Supervision of Group-wide liquidity risks, independently calculating the risk management metrics within risk systems.
- Definition of risk measurement methodologies and verification of the correct operation of control and measurement systems.
- Daily monitoring of risk indicators and limits reporting to the different management units.
- Systematic control and analysis of the adherence to limits, identifying instances of non-fulfilment and activating the necessary procedures for their correction.
- Establishment and generation of the necessary reporting framework for optimum monitoring and control of risk management limits.

Furthermore, the risk control and reporting framework for RAS indicators is comprised of:

- Preparation and regular updates of a scorecard to show the evolution of the main metrics, ensuring their adherence to the framework and limits set forth.
- Systematic control and assessment of changes to all material risks.
- Reporting and proposing actions (activation of procedures, changes to guidelines, etc.) based on the assessment of changes to risks.

#### 4.4.2.3. Residual term of transactions

The table below shows the breakdown by contractual balance maturity, excluding, in some cases, value adjustments and losses due to impairment, of certain items on the consolidated balance sheet at 31 December 2016 and 2015, under business-as-usual conditions:

	More than 5							Up to 1

In this analysis, very short-term loans traditionally present financing needs as they contain the continuous maturities of short-term liabilities, which in typical banking activities see higher turnover rates than assets, but as they are continuously renewed they end up actually covering such needs and even resulting in an increase of the outstanding balances.

It should be noted that it is systematically evident that the financing capacity of the Group in capital markets guarantees short, medium and long-term needs.

With regard to the information included in this table, it is worth highlighting that the table is a snapshot of the balance sheet which shows residual time to maturity of the asset and liability positions on the balance sheet, distributed in different temporary tranches.

The information provided is static, and it does not reflect foreseeable financing needs, as it does not include performance models of the asset/liability items.

At the same time, it is worth highlighting that the breakdown of the cash flows in the parent company have not been discounted.

The parent company's treatment of the contractual maturities of financial liabilities with specific characteristics for the purposes of their reflection, are as follows:

• For any transaction that includes early repayment flows (regular or irregular), each capital flow is shown in the temporary category in which it is expected that the payment/collection will be made (in accordance with the contractual amortisation schedule).

In the case of demand liabilities, they are included in the "demand" tranche, without taking into account their type (stable vs. unstable).

• There are also contingent commitments which could lead to changes in liquidity requirements. These are fundamentally credit facilities granted with limits that have not been drawndown at the balance sheet date by the borrowers. The Board of Directors also establishes limits in this regard for its control.

Note 29 breaks down balances by contingent commitments given the characteristics of these contracts, contingent commitments are generally demandable from the time of the contractual formalisation of such commitments. It is for this reason that they should appear as "demand" in the table of contractual maturities.

- Balances from financial guarantee contracts have been included in the table, assigning them the maximum amount of the guarantee for the first year in which the guarantee can be executed.
- Financing in the capital markets via instruments which include clauses that could lead to accelerated repayment (puttables, or instruments with clauses linked to a downgrade in credit rating) is reduced in line with the Group's financial liabilities. It is for this reason that the estimated impact on the parent would not be significant.
- At 31 December 2016 and 2015 the Group does not present additional instruments to regulated instruments from framework contracts associated with the contracting of derivative products or temporary acquisitions/sales of financial assets.
- The Group does not have instruments which allows the entity to decide whether to liquidate its financial liabilities using cash (or another financial asset) or through the submission of its own shares at 31 December 2016 and 2015.
- At 31 December 2016 and 2015 the Group does not have instruments which are subject to master netting agreements.

## 4.4.2.4. Financing strategy and development of liquidity throughout 2016

The main source of the Group's funding is customer deposits (mainly demand accounts and term deposits captured through the branch network), supplemented by funding through interbank and capital markets in which the entity maintains various short-term and long-term funding programmes in order to achieve an adequate level of diversification by type of product, term and investor. The entity maintains a diversified portfolio of liquid assets that are largely eligible as collateral in exchange for access to financing from the European Central Bank (ECB).

#### On-balance sheet customer funds

At 31 December 2016, on-balance sheet customer funds amounted to  $\leq 133,457$  million, compared with  $\leq 131,489$  million at 2015 year-end and  $\leq 94,497$  million at 2014 year-end (1.5% increase in December 2016 compared with December 2015, and a 39.2% increase in December 2015 compared with December 2014 as a result of the acquisition of TSB in June 2015). In 2016, the movement of balances from term deposits to current accounts and investment funds has continued, as a result of the downward trend of interest rates. At 31 December 2016, the balance of sight accounts totalled  $\leq 92,011$  million euros (+8.8%), to the detriment of term deposits, which showed a -13.3% decrease.

#### On-balance sheet customer funds by maturity:

	2016	3 months	6 months 1	2 months >1	.2months	No mat.
Total on balance sheet customer funds (*)	133,457	10.3%	6.8%	7.9%	5.9%	68.9%
Deposits with agreed maturity	37,214	34.7%	21.3%	26.7%	17.3%	0.0%
Demand deposits	92,011	0.0%	0.0%	0.0%	0.0%	100.0%
Retail issues	4,232	21.4%	28.0%	15.7%	34.9%	0.0%

(\*) Includes customer deposits (ex-repos) and other liabilities placed in the branch network: notes necessarily convertible into shares, Banco Sabadell nonconvertible bonds, promissory notes and others.

	2015	3 months	6 months 1	2 months >1	2months	No mat.
Total on balance sheet customer funds (*)	131,489	8.7%	8.0%	12.7%	6.3%	64.3%
Deposits with agreed maturity	42,947	25.2%	22.5%	34.6%	17.7%	0.0%
Demand deposits	84,536	0.0%	0.0%	0.0%	0.0%	100.0%
Retail issues	4,006	15.9%	21.6%	46.4%	16.1%	0.0%

(\*) Includes customer deposits (ex-repos) and other liabilities placed in the branch network: notes necessarily convertible into shares, Banco Sabadell nonconvertible bonds, promissory notes and others.

Off-balance sheet customer funds managed by the Group and those traded but not under management are shown in Note 30 to these consolidated annual accounts.

The deposits of the entity are traded through the following units/companies of the Group (Commercial Banking, Corporate Banking and Global Businesses, Private Banking, SUB and TSB). Details of the volumes of these business units are included in the section on Business results of the Directors' Report.

In 2016, the positive trend in terms of the generation of a commercial gap observed in recent years has continued, which has allowed the entity to continue with its policy to partially refinance capital market maturities and, at the same time, continue reducing the Group's Loan to Deposits (LtD) ratio (from 147% at 2010 year-end to 105.1% at 2016 year-end). To calculate the Loan to Deposits (LtD) ratio, the net lending to customers, adjusted by subsidised financing, is used as the numerator, and retail financing as denominator.

## Capital Markets

The level of financing in the capitals market has been declining in the last few years, as a consequence of, amongst others, a positive performance of the commercial gap. At the end of 2016, the outstanding balance of financing in capital markets stood at €25,160 million, compared with €27,436 million at the end of 2015. By product type, as of December 2016, €13,607 million of the total amount placed in capital markets corresponded to covered mortgage bonds, €2,816 million to promissory notes and ECP placed with wholesale investors, €1,741 million to senior debt (of which €1,059 million corresponded to state-secured transactions from the acquisition of Banco CAM), €1,514 million corresponded to issuances of subordinated bonds and preferred shares, €5,653 million to securitisation bonds placed on the market (of which €3,433 million correspond to TSB), and €33 million correspond to other medium and long-term financial instruments.

Maturities of issuances aimed at institutional investors by product type at 31 December 2016 are analysed below:

	2017	2018	2019	2020	2021	2022	>2023	ng

Emillion

Banco Sabadell Group is an active participant in the capital markets and has a number of funding programmes in operation, with a view to diversifying its sources of liquidity.

In terms of short-term financing, the entity maintains a company promissory notes programme and a Euro Commercial Paper (ECP) programme:

- Company promissory notes programme: this programme regulates issues of promissory notes and is aimed at institutional and retail investors. On 3 March 2016, the promissory notes programme of Banco Sabadell for 2016 was registered with the CNMV (Spanish Securities Commission), with an issue limit of €6,000 million, extendible to €9,000 million. The outstanding balance of the promissory notes programme has remained stable, with a slight reduction in the outstanding balance between institutional investors, and a slight increase in the balance allocated to non-qualified investors. At 31 December, the outstanding balance stood at €3,676 million (net of promissory notes subscribed by companies of the Group), compared with €3,661 million euros at 31 December 2015.
- Euro Commercial Paper (ECP) Programme, aimed at institutional investors, whereby securities are issued for the short term in various foreign currencies: euros, USD and GBP. On 18 December 2015, Banco Sabadell renewed its Euro Commercial Paper Programme for a maximum nominal amount of €3.5 billion. At 31 December 2016 the outstanding balance stood at €246 million, in comparison to €275,9 million at the end of 2015.

Regarding medium- and long-term financing, the entity maintains the following active programmes:

- Programme for the issue of non-equity securities registered with CNMV ("Fixed Income Programme"): this programme regulates the issues of bonds and obligations, both straight and subordinated, and mortgage covered bonds, territorial bonds and structured bonds, carried out under Spanish law through the CNMV (Spanish Securities Commission) and aimed at both national and foreign investors. The limit available for new issues under the Programme for the issue of non-equity securities for 2016 of Banco Sabadell at 31 December 2016, was of €10,638.8 million (at 31 December 2015, the outstanding balance under the Fixed Income Programme of 2015 was of €6,145.8 million).
- During 2016, Banco Sabadell has carried out issuances under the Fixed-Income Scheme in force for a total of €7,658.5 million. Throughout this year, the bank has accessed the market on several occasions, taking advantage of available liquidity windows. Specifically, in March Banco Sabadell carried out two public issuances of mortgage covered bonds at eight and seven years in June and October 2016, totalling €1 billion, respectively; the extension of an existing covered bond by €100 million in March, three 8-year issuances of covered bonds totalling €600 million fully subscribed by the European Investment Bank (EIB); 8 issuances of senior debt with a 1 to 3.25 year term totalling €2,488 million and 11 issuances of structured notes totalling €220.6 million and with terms varying between 1 and 5 years. In the current market environment, the entity would have the capacity to issue in different formats and terms.
- Euro Medium Term Notes (EMTN) Programme, registered on 31 March 2016 with the Irish Stock Exchange. This programme allows senior debt and subordinated bonds to be issued in any currency, with a maximum limit of €5 billion. On 6 May 2016, Banco Sabadell carried out an issuance of 10-year subordinated bonds amounting to €500 million under this new EMTN programme.

On the other hand, activity in Banco Sabadell's primary markets has currently not been affected due to the result of the Brexit referendum held in June 2016, on the UK's membership in the European Union. As an example, in October 2016 the Bank issued a seven year mortgage covered bond in the market for the amount of 1 billion euros, achieving a historically low cost.

TSB has continued to consolidate itself as a benchmark issuer, and it would appear that the market also views it as such. In this regard, although TSB continues to have access to wholesale markets, very high volumes are not expected, due to its ease of access to retail markets and the implementation of the Term Funding Scheme by Bank of England in August. The Term Funding Scheme is a programme which aims to incentivise funding, allowing British banks to make drawdowns for terms of 4 years from the date of drawdown in exchange for eligible collateral.

• Asset securitisation: Since 1993, the Group has been very active in this market and has taken part in various securitisation programmes, sometimes acting together with other highly solvent institutions, granting mortgage loans, loans to small and medium-sized enterprises, consumer loans and credit rights deriving from financial lease contracts.

There are currently 34 outstanding asset securitisation operations (including the securitisation of Banco Guipuzcoano, Banco CAM, BMN, Banco Gallego and TSB), although part of the bonds issued were withheld by the entity as liquid assets eligible for financing operations with the European Central Bank, the rest of the bonds were placed in capital markets. At the closing of 2016, the balance of securitisation bonds placed in the market stood at €5,653 million.

For efficiency reasons, during 2016, 3 securitisation operations with relatively small outstanding balances were terminated early (see further details on securitisation funds in Schedule II of the annual report).

On 28 July 2016, Banco Sabadell carried out a new securitisation of loans awarded to SMEs named IM Sabadell Pyme 10, for an amount of €1,750 million, the amount of which has been fully withheld in the portfolio.

During the first half of 2016, TSB launched a new mortgage securitisation named Duncan Funding 2016-1 PLC for an amount equivalent to €3,934 million, of which €664 million have been placed in the market.

In general terms, in 2016, the tone of the markets has been positive, although there have been several episodes of volatility caused by political and regulatory uncertainty, which have led to tensions and even the closure of markets during relatively prolonged periods. In the overall system, a large portion of maturities in the market have not been refinanced, which together with the ECB's economic stimulation measures from the last quarter of 2014 and the beginning of 2016, has resulted in excess liquidity.

In March 2016, the European Central Bank announced new economic stimulation measures through a new targeted long-term refinancing operations programme (TLTRO II), consisting of four 4-year liquidity auctions with execution dates between June 2016 and March 2017. Banco Sabadell has taken part in TLTRO II, with a total of  $\leq 10,000$  million, though the early redemption of  $\leq 11,000$  million from TLTRO I auctions announced by the ECB in June 2014. Similarly, the entity has taken part in the Covered Bond Purchase Programme (CBPP3) implemented by the European Central Bank.

In August, Bank of England also implemented a series of measures to support economic growth. This package includes a reduction of the Bank Base Rate and the introduction of the Term Funding Scheme (TFS). TSB, as a member of the Sterling Monetary Framework (SMF), plans to use the TFS as usual, with a view to obtaining funding at low costs. There are no drawdowns under TFS at the close of 2016.

The market's excess liquidity, together with a low interest rate environment, has reduced prices of repo funding compared to other alternatives. At 31 December 2016 the net nominal income from repo funding stood at €7,927 million.

#### Liquid assets

In addition to these sources of funding, Banco Sabadell maintains a liquidity buffer in the form of liquid assets with which to meet possible liquidity needs.

	2016	2015
Cash(*) + Net Interbank Position	8,002	4,016
Funds available in facility	6,869	4,349
Pledged assets in facility (**)	18,687	15,899
Drawn-down balance on Bank of Spain facility( * * *)	11,818	11,550
Eligible ECB assets not included in the policy	8,423	10,785
Other tradable assets not eligible for the central $bank(***)$	3,587	3,097
Total Liquid Assets Available	26,881	22,247

(\*) Excess reserves at Central Banks

 $(^{\star\star})$  M arket value and once the ECB discount has been applied for monetary policy operations.

(\*\*\*) Of which, in 2016, 10,000 correspond to ECB four year liquidity auctions with a specific objective (TLTRO or Targeted Longer-term refinancing operations). En 2015, 11,000 correspond to BoS auction of TLTRO of 17 December 2014.

(\*\*\*\*) M arket value and once the Liquidity Coverage Ratio (LCR) discount has been applied. Includes Fixed Income considered as a high quality and liquid asset according to LCR (HQLA and other tradable assets from different Group entities.

With respect to 2015, Banco Sabadell's first line of liquidity has grown by 4,634 million euros, partly due to the commercial gap, the diversification of the properties portfolio and the creation of own collateral.

In the case of TSB, the first line of liquidity at 31 December 2016 is mainly comprised of gilts amounting to  $\notin$ 1,678 million ( $\notin$ 1,718 million at 31 December 2015) and a surplus of reserves in Bank of England (BoE) amounting to  $\notin$ 4,191 million ( $\notin$ 3,383 million at 31 December 2015).

It should be noted that Banco Sabadell Group follows a decentralised liquidity management model. This model tends to limit the transfer of liquidity between the various subsidiaries involved in liquidity management, thereby limiting intra-group exposures, going beyond the potential restrictions imposed by local regulators on each subsidiary. Thus, the subsidiaries involved in liquidity management determine their liquidity position by considering only those assets in their possession which meet the requirements of eligibility, availability and liquidity set forth both internally and in regulations in order to comply with regulatory minimums.

There are no significant amounts of cash and cash equivalents which are unavailable for use by the Group.

In addition to the first line of liquidity, the bank maintains a buffer of real estate assets and loans to central governments eligible as collateral of covered mortgage bonds and covered territorial bonds respectively, which at the end of 2016 contributed  $\leq$ 4,924 million in terms of the capacity to issue new treasury bonds eligible as collateral in return for access to the ECB facility. At the end of 2016, available liquidity amounted to  $\leq$ 31,805 million in cash, corresponding to the amount of the first line of liquidity plus the bank's capacity at year-end to issue covered bonds and territorial bonds, adjusted to the average haircut applicable to covered bonds by the ECB.

### 4.4.2.5. Compliance with regulatory ratios

Banco Sabadell Group has included as part of its liquidity management the monitoring of a short-term liquidity coverage ratio (LCR) and the net stable funding ratio (NSFR), reporting to the regulator the information required on a monthly and quarterly basis, respectively. The measurement of liquidity based on these metrics forms part of the control of liquidity risks in the set of UGLs.

As regards the LCR ratio, since 01 January 2016, the regulatory minimum is 70%, a level which is comfortably surpassed by all of the entity's UGLs, in which TSB and Banco Sabadell Spain stand out due to their extremely high LCRs. At Group level, the bank's LCR has consistently been above 100% throughout the year.

In terms of NSFR, this is still under review and pending finalisation. The scheduled date for its implementation is January 2018, and, as with the LCR, a period has been set for its gradual implementation. However, the bank has already started monitoring this ratio as a liquidity metric for UGLs.

Given the bank's funding structure, in which customer deposits have a significant weight, and as the majority of its market funding is in the medium/long-term, the bank has maintained stable levels consistently over 100%.

## 4.4.3 Market Risk

This risk is defined as the possibility of incurring a loss in the market value of positions maintained in financial assets, as a result of changes in risk factors which in turn affect their share price and stock exchange contributions, their volatilities and the correlations between them.

These positions that generate market risk are usually limited to trading activities, which consist of the coverage operations performed by the bank to provide services to its customers and the maintenance of the entity's own positions of a discretionary nature.

Market risk may also arise simply by maintaining global balance sheet positions (also known as structural positions) that in net terms are left open. In the latter case, the entity uses the market risk management and monitoring system to treat the structural exchange rate risk position. Other market risks of a structural nature, affected by such factors as interest rates, are addressed in the relevant sections.

The market risk acceptance, management and oversight system is based on the imposition of limits for specifically assigned positions and the approval of transactions of each business unit. The various management units therefore have the duty and obligation to manage their positions within the established limits and to obtain approval from the risks department.

## Trading activity

The principal risk factors considered by Banco Sabadell in its trading activity are:

- Interest rate risk: risk associated with the possibility of fluctuations in interest rates adversely affecting the value of a financial instrument. This is reflected, for example, in interbank deposit operations, fixed income and interest rate derivatives.
- Credit spread risk: this risk derives from the fluctuations in credit spreads at which instruments are quoted with respect to other benchmark instruments, such as interbank interest rates. This type of risk mainly occurs in fixed income instruments.
- Exchange rate risk: risk associated with the fluctuation in exchange rates with regard to the reference currency. In the case of Banco Sabadell, the reference currency is the euro. This risk principally occurs in currency exchange transactions and currency derivatives.
- Equity risk: risk which derives from the fluctuation in the value of capital instruments (shares and listed stock exchanges). This risk is reflected in the market prices of securities, as well as their derivatives.

The changes in commodities prices has not had an impact in the year, given that the Group has residual exposures, neither as direct positions nor as derivatives underlying exposures.

Discretionary market risks in trading activities are measured using the VaR and stressed VaR methodologies. This allows for a standardisation of risks across different types of financial market transactions.

VaR provides an estimated of the maximum potential loss associated with a position due to adverse, but normal, movements of one or more of the identified parameters affecting market risk. This estimate is made in monetary terms and is associated with a specific date, a particular confidence level and a specified time horizon. A 99% confidence level is used. Due to the low complexity of the instruments and the high liquidity of the positions, a time horizon of 1 day is used.

The advantages of this methodology are that it is based on the full revaluation of the operations under recent historic scenarios, and it is not necessary to make assumptions on the distribution of market prices. The main limitation to this methodology is its dependence on historic data used, given that if a potential event has not materialised within the range of historic data used, it will not be reflected in the VaR information.

The reliability of the VaR methodology can be proven using backtesting techniques, which can be used to verify that the VaR estimates fall within the contemplated confidence level. Backtesting consists of the comparison between daily VaR and daily results. In the event that losses exceed the level of VaR, an exception occurs. In 2016 no exceptions occurred in the backtesting, due to the low exposure to significant events during the year, such as the Brexit referendum ( $24^{th}$  June).

Stressed VaR is calculated in the same way as VaR but with a historical insight of variations of the risk factors in stressed market conditions. This stress situation is determined on the basis of current operations, and it varies if the risk profile of portfolios changes. The methodology used for this risk metric is the historic simulation.

Its monitoring is complemented with additional measures such as sensitivities, which refer to a change taking place in the value of a position or portfolio in response to a change in a specific risk factor. It is also complemented by the calculation of management results, used to monitor stop-loss limits.

Furthermore, specific simulation exercises are carried out with extreme market scenarios (stress testing), in which the impacts of different past and theoretical scenarios on portfolios are analysed.

Market risks are monitored on a daily basis and reports are made on the existing risk levels and on the abidance by the limits set forth by the Risk Committee for each management unit (limits based on nominal, VaR and sensitivity, as applicable). This allows any changes to the risk levels to be detected, and also gives information regarding the contribution of market risk factors.

Market risk for the trading activity incurred in terms of the VaR at day 1 with 99% confidence for 2016 and 2015 is as follows:

		2016			2015		
	Medium	Maximum	Minimum	Medium	Maximum	Minimum	
Interest rate risk	0.90	2.86	0.45	0.94	1.68	0.54	
Currency risk-trading	0.20	0.55	0.04	0.14	0.51	0.03	
Equity risk	0.69	1.62	0.30	0.52	1.15	0.21	
Credit spread	0.99	3.58	0.32	0.10	0.18	0.06	
Aggregate VaR	2.78	7.90	1.23	1.70	3.52	0.84	

## 4.4.3.1. Structural Interest Rate and Exchange Rate Risks

#### Structural interest rate risk

Structural Interest rate risk (also known as Interest Rate Risk in the Banking Book, or IRRBB) is inherent to banking activities and is defined as the possibility of incurring losses as a result of the impact caused by interest rate fluctuations on the income statement (income and expenses) and on an entity's equity structure (current value of assets, liabilities and off-balance sheet positions sensitive to interest rates).

The following types are considered under structural risks:

- Repricing risk: related to a temporary mismatch between the maturity dates and the repricing of assets, liabilities and short and long-term off-balance sheet positions.
- Curve risk: arising from changes in the level or gradient of the interest rate curve.
- Base risk: arising from hedging exposure of an interest rate using exposure to an interest rate that is repriced in different conditions.
- Option risk: arising from options, including implicit options.

The metrics developed to control and monitor the Group's structural interest rate risk are aligned with the best market practices and are consistently implemented across all balance sheet management units (UGBs, for their acronym in Spanish), and by local asset and liability committees. The diversification between currencies and UGBs is taken into consideration when presenting figures at a global level.

The current interest rate risk management strategy of the Group is mainly based on the following principles and pillars, in line with the business model and the strategic objectives defined:

- Each UGB has appropriate tools and processes and robust systems in order to perform an adequate identification, measurement, management, control and reporting of IRRBB. This allows them to obtain information from all of the identified IRRBB sources, assess their effect on financial margins and the economic value of assets and measure the vulnerability of the Group/UGB to potential losses deriving from IRRBB under different stress scenarios.
- At a corporate level, a set of limits is set forth for overseeing and monitoring the level of exposure to IRRBB which will be in line with the internal risk tolerance policies. However, each UGB has the autonomy to set any other additional limits deemed necessary, based on their specific needs and the nature of their activities.
- The existence of a transfer pricing system.
- The set of systems, processes, metrics, limits, reporting and governance covered by the IRRBB strategy must comply with regulatory requirements.

The metrics used to monitor structural interest rate risk include, on one hand, the interest rate gap, which is a static measure which shows the breakdown of maturities and repricing of sensitive items on the balance sheet. For items with no contractual maturity, expected maturities estimated using the bank's past experience are considered, setting forth stability and remuneration hypotheses in line with the type of product.

Time until review or maturity	Up to 1 month	1 and 3 months	3 and 12 months	1 and 2 years	2 and 3 years	3 and 4 years	4 and 5 years	More than 5 years	Total
Money Market	11,582,282	995,726	694,867	10,056	15,433	-	-	-	13,298,364
Loans and receivables	30,239,930	24,172,993	45,704,621	9,829,568	4,643,156	4,606,265	3,652,136	10,718,929	133,567,598

Debits represented by marketable securities	5,838,507	6,244,639	3,626,795	2,763,070	635,725	2,671,713	2,168,561	3,882,080	27,831,091
Of which: subordinated liabilities	66,050	58,800	17,680	-	-	424,600	449,661	515,025	1,531,817
Other liabilities	413,359	578,921	1,915,619	405,944	306,036	178,685	109,491	262,678	4,170,734
Total liabilities	46,001,950	40,095,869	27,288,751	11,411,161	4,816,187	15,702,518	37,571,894	4,161,028	187,049,360
Hedging Derivatives	479,189	4,499,515	(1,712,535)	(704,377)	121,734	65,789	391,706	(3,141,020)	-
Interest rate gap	(2,911,897)	(10,002,181)	17,868,792	(1,680,299)	929,586	(10,237,954)	(31,769,065)	20,125,293	(17,677,726)

On the other hand, the sensitivity of different key economic figures (financial margin, economic value) to changes in the interest rate curve is calculated. The following table shows the interest rate risk level in terms of the sensitivity of the main currencies of the Group at 2016 year-end:

	Instant and parallel increase of 100 b.p's					
Interest rate sensitivity	Impact on financial spread	Impact on economic value				
EUR	0.1%	1.3%				
GBP	1.9%	(2.2%)				
USD	0.2%	(0.3%)				

In addition to the impact on net interest income, in the time horizon of one year, presented in the previous table, the Group calculates the impact on net interest income for the time horizon of two years, the result of which is notably more positive for all currencies.

Given the current level of market interest rates, in the scenario of a decline in interest rates, a maximum shift of 100 basis points in each term is applied, so that the resulting interest rate is always greater than or equal to zero.

Derivatives derived from financial markets are used as risk hedging instruments, mainly interest rate swaps (IRS), which are considered as hedging instruments for accounting purposes. Two different forms of macro-hedging are used:

- Macro-hedging of interest rates of cash flows, the purpose of which is to reduce the volatility of net interest income as a result of interest rate fluctuations, for a one-year time horizon.
- Macro-hedging of interest rates at fair value, the purpose of which is to maintain the economic value of the hedged items, consisting of assets and liabilities at a fixed interest rate.

Balance sheet items accounted at amortised cost do not show any valuation adjustments associated with interest rate changes. On the other hand, for financial assets classified as "Available-for-sale financial assets" valued at fair value, the change in risk premiums has had a greater impact than the decline in interest rates during the year.

#### Structural exchange rate risk

Structural exchange rate risk arises ahead of the event that changes in market rates between different currencies could generate losses in financial investments, and for permanent investments in foreign branches and subsidiaries with functional currencies other than the euro.

The purpose of managing structural exchange rate risk is to minimise its impact on the value of the portfolio / the entity's equity due to adverse movements in currency markets. This management is subject to the risk appetite set forth in the RAS and must comply at all times with the levels set forth for established risk metrics.

Exchange rate risk is monitored on a daily basis, and reports on current risk levels and on compliance with the limits assigned to each unit are sent to the risk control functions established by the Risk Committee. The main monitoring metric is currency exposure (as a percentage of Tier 1), which measures the sum of the net open position (assets less liabilities) maintained by the entity in each currency through any type of financial instrument (FX spots, forwards and options), valued in euros and in terms of Tier 1.

Compliance and the effectiveness of the Group's targets and policies are monitored and reported on a monthly basis to the Risk Committee and to the Audit and Control Committee, respectively.

The Financial Division, through ALCO, has designed and executed the coverage of foreign exchange structural positions with the primary aim of minimising the negative impact on CET1 capital ratios caused by exchange rate fluctuations.

In 2016, in a context of continued uncertainty, caused by the post-Brexit referendum negotiations, Banco Sabadell continues to be vigilant with respect to the EUR/GBP exchange rate. During this period the Group has adopted a hedging policy which aims to mitigate the negative effects on capital ratios, as well as the results generated from its business in GBP, which may arise from the evolution of the EUR/GBP exchange rate.

During 2016, capital hedging has increased, from 768 million sterling pound in 2015, until the current 1,368 million sterling pound, which represents 73% of the total investment carried out (see Note 13 Hedging of net investments in foreign businesses).

This currency hedging is continuously monitored based on market movements.

The useral auro

The exchange value in euro of assets and liabilities in foreign currencies maintained by the Group at 31 December 2016 and 2015, classed in line with their nature, is as follows:

	2016					
	U.S.D	GBP	Other currencies	Total		
Assets denominated in foreign currency:	15,878,614	44,435,457	1,133,974	61,448,045		
Cash and cash balances with central banks and other demand deposits	652,889	4,266,002	165,408	5,084,299		
Debt securities	3,731,567	2,450,815	60,693	6,243,075		
Loans and advances						
Central banks and credit institutions	277,689	721,908	12,572	1,012,168		
Customers	10,735,376	35,012,927	810,188	46,558,492		
Other assets	481,094	1,983,805	85,112	2,550,010		
Liabilities denominated in foreign currency: Deposits	14,864,643	41,702,364	418,332	56,985,338		
Central banks and credit Institutions	4,639,081	969,118	208,281	5,816,480		
Customers	9,873,168	35,482,586	166,121	45,521,875		
Other liabilities	352,393	5,250,659	43,930	5,646,983		

	2015					
	U.S.D	GBP	Other currencies	Total		
Assets denominated in foreign currency	14,737,033	46,239,931	665,890	61,642,854		
Cash and cash balances with central banks and other demand deposits	570,278	4,211,810	38,684	4,820,772		
Debt securities	4,290,721	1,690,073	38,925	6,019,719		
Loans and advances						
Central banks and credit Institutions	201,959	28,587	50,827	281,373		
Customers	9,097,497	36,296,135	456,138	45,849,770		
Other assets	576,578	4,013,326	81,316	4,671,220		
Liabilities denominated in foreign currency Deposits	11,731,015	41,052,234	221,502	53,004,751		
Central banks and credit institutions	3,525,967	31,655	110,588	3,668,210		
Customers	7,898,875	35,528,670	94,662	43,522,207		
Other liabilities	306,173	5,491,909	16,252	5,814,334		

The net position of foreign currency assets and liabilities includes the structural position of the bank valued at a historic exchange rate at  $\leq 1,685$  million, of which  $\leq 597$  million correspond to permanent shareholdings in GBP,  $\leq 769$  million to permanent shareholdings in USD and  $\leq 279$  million in stakes in MXN. Net assets and liabilities valued at the exchange rate are hedged through forwards and foreign exchange options, in accordance with the Group's risk management policy.

At the end of 2016, the sensitivity of equity exposure to a 1% devaluation in exchange rates against the euro of the main currencies to which the bank is exposed amounted to  $\leq$ 17 million, of which 35% correspond to the sterling pound, 46% to the US dollar, 17% to the Mexican peso and the rest to other currencies.

## 4.4.4 Operational Risk

Operational risk is defined as the risk of incurring losses due to from inadequate or failed internal processes, people or systems or due to unexpected external events. This definition includes reputation risk (which in turn includes behavioural risk), technology, model and outsourcing risks.

The operational risk management process is decentralised, split among the various process managers throughout the organisation. The processes they manage are indicated in the corporate process flowchart, which facilitates the distribution of information throughout the organisation. The Group has a central unit specialised in the management of operational risk, whose main functions are to coordinate, supervise and promote the identification, assessment and management of risks by the process managers, based on the management model adopted by Banco Sabadell Group.

Senior Management and the Board of Directors are directly involved and effectively take part in the management of this risk by approving the management framework and its implementation as proposed by the Operational Risk Committee. The latter is formed of Senior Management members from different functional areas within the entity. The management of this risk also requires regular audits to be carried out on the application of the management framework and the reliability of the information provided, as well as internal validation tests of the operational risk model. Operational risk management is based on two lines of action:

The first line of action is based on the analysis of processes, the identification of risks associated with such processes that may result in losses, a qualitative assessment of the risks and the associated controls, carried out jointly between process managers and the central operational risk unit. This provides an assessment which lets the entity know its future exposure to the risk in terms of expected and unexpected loss, and also allows trends to be foreseen and the corresponding mitigating actions to be efficiently planned.

This is complemented by the identification, monitoring and active management of the risk through the use of key risk indicators, causing the establishment of alerts to warn of any increase in this exposure, the identification of the causes for this increase, and the measurement of the efficiency of the resulting controls and improvements.

At the same time, a check is made to ensure that processes identified as being highly critical in the event of discontinued service have specific business continuity plans in place and that they are implemented. In terms of the risks identified, a qualitative estimate is made of the reputation impact that these risks could cause in the event of their occurrence.

The second line of action is based on experience. It consists of recording all losses suffered by the entity in a database, providing information about operational risks encountered by each line of business, as well as their causes, so that action may be taken to minimise these risks.

Additionally, this information allows the coherence between the estimates made on potential and real losses to be compared and contrasted, in terms of both frequency and severity, iteratively improving the estimates of exposure levels.

Operational Risk includes the management and control of the following significant risks:

- Reputation risk: possibility of incurring losses derived from negative publicity related to the entity's practices and business, which may also generate a lack of confidence in the institution, thereby affecting is solvency.
- Technological risk: possibility of incurring losses derived from an inability of the systems' infrastructure to fully continue carrying out its day-to-day activities.
- Outsourcing risk: the possibility of incurring losses deriving from: suppliers failing to provide subcontracted services or discontinuing their provision, weaknesses in their systems' security, disloyal customers or a breach of applicable regulations.
- Model Risk: the possibility of incurring losses derived from decisions taken based on the use of inadequate models.

## 4.4.5 Fiscal risk

Fiscal risk is defined as the probability of failing to comply with the objectives set forth in the fiscal strategy of Banco Sabadell from a dual perspective due to either internal or external factors:

- On one hand, the probability of failing to comply with the tax obligations that may result in an undue lack of income, or the occurrence of any other event that generates potential damages for the bank in terms of its meeting objectives.
- On the other hand, the probability of undue income arising from meeting tax obligations, thus negatively affecting shareholders or other stakeholders.

Banco Sabadell's fiscal risk policies aim to set forth principles and guidelines in order to ensure that any fiscal risks that may affect the strategy and fiscal objectives of the Group are systematically identified, assessed and managed, so as to comply with the new requirements of the Spanish Capital Companies Act and stakeholders of Banco Sabadell Group.

In terms of fiscal risk, Banco Sabadell aims to meet its tax obligations at all times, adhering to the current legal framework in matters relating to taxation.

Banco Sabadell's fiscal strategy reflects its commitment to promoting responsible taxation, promoting the prevention and development of key transparency schemes in order to strengthen the trust of the various stakeholders.

The Group's fiscal strategy is aligned with its business strategy, and manages fiscal aspects efficiently and in line with the principles of prudence and mitigation of fiscal risk.

The Board of Directors of Banco Sabadell, under the framework of powers set forth in the Spanish Capital Companies Act for the improvement of corporate governance, is responsible, and cannot delegate such responsibility, for the following:

- Setting the company's fiscal strategy.
- Approving investments and operations of all types which are considered strategic or to have a particular fiscal risk due to their amounts or particular characteristics, except when such approval corresponds to the Annual General Meeting.
- Approving the creation and acquisition of interests in special purpose entities or entities domiciled in countries or territories considered as tax havens.
- Approving any similar transaction which, due to its complexity, could undermine the transparency of the company and its Group.

Thus, the functions of the Board of Directors of Banco Sabadell include the obligation to approve the corporate fiscal policy and ensure compliance therewith by implementing an appropriate control and oversight system, covered by the general risk management and control framework of the Group.

### 4.4.6 Compliance risk

Compliance risk is defined as the possibility of incurring legal or administrative sanctions, significant financial losses or loss of reputation as a result of breaches of laws, regulations, internal standards and codes of conduct related to banking activities.

An essential aspect of Banco Sabadell Group's policy, and one of the foundations of its organisational culture, is the meticulous fulfilment of all legal terms and conditions. The achievement of corporate objectives should be sought in such a way that is compatible with the legal system at all times and by applying best practices.

To this end, the Group has its Compliance Division whose purpose is to promote and endeavour to reach the highest degrees of compliance with the legislation in force and the professional ethics of the Group, to minimise the possibility of non-compliance and ensure that any instances of non-compliance are identified, reported and diligently resolved, and that the appropriate preventive measures are adopted in the event that these are not already in place.

The compliance model assigns responsibility for establishing policies, procedures and controls to the parent undertaking. Responsibility for the execution of control programmes also resides with the parent undertaking. Foreign branches and subsidiary undertakings are assigned responsibility for the implementation of those policies, procedures and controls that directly affect them, and are also responsible for their functional maintenance.

It is a flexible model focused on risk, which is continuously adapted to the Group's strategy and which takes full advantage of synergies, maintaining an overall focus on any aspects that fall within the general scope and/or which require significant technological development, but which is also adapted to the specifications and legislation affecting each business or each country.

The main challenge is the standardisation within the Group of regulatory compliance control levels, setting compulsory minimum standards, irrespective of the activity or country in which this activity is being carried out.

This model is made up of two pillars:

(i) A central unit which provides services to the whole Group and which is aimed at the Group-wide management of compliance risk. Its main tasks are the analysis, distribution and implementation control of any new regulations that could impact the Group, as well as the control, focused on risk, of the correct fulfilment of the regulations already in place.

Additionally, it is directly responsible for the execution of various processes which have been categorised as high risk, as they require comprehensive and direct control methods: anti-money laundering and combating the financing of terrorism; control of market abuse practices; control of fulfilment of Internal Code of Conduct and the implementation and monitoring elements for investor protection (MiFID).

(ii) A network of compliance supervisors located in each subsidiary and foreign branch (with functional dependency on the central compliance unit and hierarchical reliance on the manager of the subsidiary or foreign branch) and which operate their own control programmes. They regularly report to the central unit to ensure the fulfilment of internal rules and regulations and compliance with the legislation in force that govern the countries in which these subsidiaries and foreign branches operate, and the activities that they carry out.

This model is constructed and implemented through six different means to ensure its efficiency: technology, training, procedures, communication channels, control and monitoring programmes and an approval process of products and regulations.

# Nota 5 – Minimum own funds and capital management

## **Regulatory Framework**

On 1 January 2014, the new regulatory framework entered into force, whereby the European Union has implemented the capital regulations of the Basel III accords by the Basel Committee on Banking Supervision (BCBS) under a phase-in model until 1 January 2019.

This regulation, which is split into three pillars, regulates the minimum own funds to be kept by credit institutions, on both an individual and consolidated basis, and the way in which these own funds must be calculated (Pillar I), as well as the various internal capital assessment process that must be performed (Pillar II), and the public information that must be disclosed to market (Pillar III).

This regulatory framework consists of:

- Directive 2013/36/EU (generally known as CRD-IV), of 26 June 2013, of the European Parliament and of the Council, on access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms, amending Directive 202/87/EC and repealing Directives 2006/48/EC and 2006/49/EC.
- Regulation (EU) 575/2013 (generally known as CRR), of 26 June 2013, of the European Parliament and of the Council, on prudential requirements for credit institutions and investment firms and amending Regulation (EU) 648/2012.

Directive CRD-IV was transposed into Spanish law through:

- RD-Law 14/2013, of 29 November, on urgent measures for adapting Spanish law to European Union regulations in terms of supervision and solvency of financial institutions.
- Law 10/2014 of 26 June, on the ordering, supervision and solvency of credit institutions.
- Royal Decree 84/2015, of 13 February, implementing Law 10/2014 of 26 June, on the ordering, supervision and solvency of credit institutions, completing the regulatory implementation of the above law, while merging into a single text all the regulatory requirements for the ordering and discipline of credit institutions.
- Bank of Spain Circular 2/2016, of 2 February, the primary objective of which is to complete, in matters related to credit institutions, the transposition of Directive 2013/36/EU (Supervision of Credit Institutions) to the Spanish legal system.

The CRR, which is immediately applicable to Member States and, as such, to Spanish credit institutions, implements the requirements of Directive CRD-IV, granting authority to the national authorities of competent jurisdiction to make use thereof in certain regulatory options.

In this respect, Bank of Spain, by virtue of the enabling clause included in RD Law 14/2013, published Circulars 2/2014 and 3/2014, of 31 January and 30 July, respectively. It also recently published Circular 2/2016 by which it makes use of these regulatory options.

Under the requirements set forth in the CRR, credit institutions must comply with a total capital ratio of 8% at all times. However, regulators may exercise their authority under the new regulatory framework and require institutions to maintain additional capital.

The stress test exercise carried out by the European Banking Authority, in collaboration with the European Central Bank, concluded in July 2016 that in the most adverse scenario contemplated Banco Sabadell Group would have a Common Equity Tier 1 (CET1) ratio of 8.19%, and 8.04% fully loaded in 2018, which is proof of the Group's high liquidity to overcome very adverse economic scenarios.

The entity received a notification in November 2016 from the European Central Bank regarding the decision on the prudential minimum requirements applicable to the entity for 2017, following a Supervisory Review and Evaluation Process (SREP), determining that Banco Sabadell Group must maintain, on a consolidated basis, a CET1 ratio of 7.375% measured against phased-in regulatory capital. This requirement includes: the minimum required by Pillar 1 (4.50%), the Pillar 2 requirement (1.50%), the capital conservation buffer (1.25%) and the requirement arising from its consideration as an O-SII (0.125%). Furthermore, this is the consolidated CET1 level below which the Group would be obligated to calculate the maximum distributable amount (MDA), which would limit its distributions in the form of dividends, variable remuneration and coupon payments to holders of AT1 capital securities.

Furthermore, based on the note published by Bank of Spain on 14 December 2016, which designates systemic institutions for 2017 and sets their countercyclical capital buffers in line with the European Banking Authority Guidelines on criteria for the assessment of O-SIIs (EBA/GL/2014/10), included in Standard 14 and Annex 1 to Bank of Spain Circular 2/2016, Banco Sabadell is considered an O-SII(Other Systemically Important Institution) and the countercyclical capital buffer has been set at 0% for 2017, and the prudential capital buffer has been set at 0.125%.

At 31 December 2016, the Group's CET1 capital ratio stood at 12%. Therefore, these capital requirements do not entail any of the aforementioned limitations.

### Capital management

The management of capital funds is the result of the ongoing process of capital planning. This process considers the expected evolution of the economic, regulatory, and sectoral environment, as well as more adverse scenarios. It takes into account the expected capital consumption in different activities, under the various scenarios envisaged, and the market conditions that could determine the effectiveness of the various actions that could be considered for implementation. The process is always in line with the strategic objectives of the bank and strives to achieve an attractive return for shareholders, whilst always ensuring that its own funds are appropriate in terms of the inherent risks of the activity.

The bank's general policy on capital management is to ensure that its available capital is sufficient to cover the overall levels of risk being incurred.

The Group follows the guidelines defined by the Basel Capital Accord as a basic principle that most closely relates institutions' own funds requirements with the real risks incurred, based on internal risk measurement models that have been previously validated by independent parties.

The Group has been authorised by the supervisor to use the majority of its internal models to calculate regulatory capital requirements. Based on the risk measurements provided by these new methodologies, the Group has a comprehensive risk measurement model under one internal measurement unit, in terms of allocated capital.

The allocation of capital by risk type at the end of 2016 is as follows:

In	percentage	
		-

	2016
Credit risk	82%
Structural risk	4%
Operational risk	8%
Market risk	1%
Other	5%
Total	100%

The risk assessment in terms of necessary allocated capital enables it to be linked to the yield obtained from customer and operation levels to a business unit level. The Group has implemented a risk adjusted return on capital (RaRoC) system which provides this assessment, enabling uniform comparisons to be made and be included in the transaction pricing process.

The Group has a sophisticated system to measure each type of risk incurred and methodologies capable of integrating all of them. Such an approach requires a broad perspective of risk that takes account of possible stress scenarios and suitable financial planning in each case. The risk assessment systems used are in line with current best practices.

Each year the Group carries out its own internal capital assessment process as prescribed by the New Basel Capital Accord (NBCA), and more specifically in regulatory standards on regulatory own funds, and reports the results to the Supervisor.

The process starts from a broad spectrum of previously identified risks and a qualitative internal assessment of policies, procedures and systems for accepting, measuring and controlling each type of risk and appropriate mitigation techniques.

The next stage involves a comprehensive quantitative assessment of the necessary capital based on internal parameters and using the institution's own models (such as borrower credit rating or scoring systems) and other internal estimates appropriate to each type of risk. The assessments for each type of risk are then integrated and a figure is calculated to be used as an indicator in terms of allocated capital. In addition, the institution's business and financial objectives and stress testing exercises are reviewed to reach a final determination as to whether certain business developments or extreme scenarios could pose a threat to its solvency when compared to its available own funds.

The level and quality of capital are metrics corresponding to the Risk Appetite Statement within the Group's Strategic Risk Framework, which is explained in Note 4. Financial risk management.

For more information on capital management see the document published annually regarding Pillar III Disclosures, available on the bank's website (<u>www.grupbancsabadell.com</u>) under the section Information for Shareholders and investors / Financial information.

## Capital resources and capital ratios

At 31 December 2016, the group's qualifying capital amounted to €11,852 million, representing a surplus of €4,966 million, as shown below:

			Year-on year
	2016	2015	change (%)
Capital	702,019	679,906	3.25
Reserves	11,874,214	11,428,739	3.90
Bonds convertible into shares	-	-	-
Non-controlling interests	21,490	24,339	(11.71)
Deductions	(2,265,363)	(1,923,514)	17.77
CET1 resources	10,332,360	10,209,470	1.20
<i>CET1</i> (%)	12.0	11.5	
Preference shares, convertible bonds and deductions	-	÷	-
Tier one resources	10,332,360	10,209,470	1.20
Tier I (%)	12.0	11.5	
Tier two resources	1,519,237	1,207,912	25.77
Tier II (%)	1.8	1.4	
Capital base	11,851,597	11,417,382	3.80
Minimum capital requirement	6,885,598	7,101,497	(3.04)
Capital surplus	4,965,998	4,315,885	15.06
BIS ratio (%)	13.8	12.9	7.06
Risk weighted assets (RWA)	86,069,980	88,768,713	(3.04)

Common Equity Tier 1 (CET1) capital accounted for 87.2% of qualifying capital resources.

Tier 1 of Basel III consists of, in addition to CET1 capital, convertible bonds and the deduction of intangible assets by the same amount.

Secondary or Tier II capital provide a further 12.8% of the BIS ratio and is mainly made up of subordinated bonds and generic provisions (subject to regulatory limits as to eligibility), and other required deductions.

Over the last 5 years, the bank has increased its capital base through issuances classed as tier 1 capital, which have increased the Group's capital by more than  $\in$ 6,600 million. These include the capital increase with pre-emptive subscription rights of  $\in$ 1,607 million, carried out in April 2015 as a result of the acquisition of TSB.

During 2016 the total mandatory conversion due to the maturity of the Mandatory Convertible Subordinated Bonds series (Series III/2013) was exercised, as well as the conversion of 25% of the nominal amount of the MCSD (Series IV 2013), without any impact on capital ratios. Additionally, in 2016, a Subordinated Debt issue for the amount of 500 million euros was also executed, leading eligible TIER2 resources to amount to  $\leq$ 1,519 million.

The change in Common Equity Tier 1 (CET1) phased-in 2015 ( $\leq$ 10,209 million) and 2016 ( $\leq$ 10,332 million) is mainly due to the retained earnings in the year, larger deductions and including all valuation adjustments (incorporating valuation adjustments for sovereign debt instruments).

Risk-weighted assets (RWAs) for the period stand at  $\in$ 86,069,980 thousand, which represents a 3.04% decrease compared with the previous year, mainly due to the devaluation during the year of the British pound sterling against the euro.

All of these actions and events have enabled Banco Sabadell to reach a phased-in Common Equity Tier 1 (CET 1) level of 12.0%, and a total capital ratio of 13.8% at December 2016, which widely surpasses the levels required in the regulatory framework.

The table below shows the reconciliation of net equity with regulatory capital:

	2016	2015
Equity	12,926	12,275
Valuation adjustments	107	456
Non-controlling interests	50	37
Total net equity	13,083	12,767
Goodwill and intangibles	(2,128)	(1,989)
Other adjustments	(623)	(569)
Regulatory accounting adjustments	(2,751)	(2,558)
Common equity tier 1	10,332	10,209
Additional tier 1 capital	-	-
Tier 2 capital	1,519	1,208
Total regulatory capital	11,852	11,417

Risk weighted assets (RWAs) are distributed by risk type, as shown below, with Credit Risk showing the largest risk:

## Distribution of own funds by risk type

The distribution of own funds requirements to cover this type of risk (credit risk), broken down by segment, geography and sector is shown below:

For the calculation of risk-weighted assets by credit risk, for some portfolios the Bank has received approval from the Supervisor to treat them using an internal ratings based model, which represents 52.12% of the total.

The following table outlines the status of credit rating models developed by Banco Sabadell Group with regards to the authorisation by the Supervisor for their usage when calculating own funds requirements:

Entity	Regulatory Exposure Portfolio	Internal Portfollo	Internal Estimations Used	Method Based on Internal Ratings	Status
BS	Corporates	Portfolios based on rating models that rate corporate banking up to SMEs and developers	Probability of Default (PD) Loss Given Default (LGD) Credit Conversion Factor (CCF)	Advanced IRB	Approved or 01/2008
BS	Retail	Mortgage scoring	Probability of Default (PD) Loss Given Default (LGD)	Advanced IRB	Approved or 01/2008
BS	Retail	Consumer scoring	Probability of Default (PD) Loss Given Default (LGD)	Advanced IRB	Approved or 01/2008
BS	Corporates	Project Finance	Probability of Default (PD)	Supervisory Slotting Criteria	Approved or 12/2009
BS	Retail	Retailers & Self-Employed	Probability of Default (PD) Loss Given Default (LGD) Credit Conversion Factor (CCF)	Advanced IRB	Approved or 12/2010
BS	Retail	Behavioural scoring cards & credit	Probability of Default (PD) Loss Given Default (LGD) Credit Conversion Factor (CCF)	Advanced IRB	Approved or 12/2011
BS	Institutions	Financial Institutions	Probability of Default (PD)	Foundation IRB	Approved or 12/2012
TSB	Retail	Mortgage scoring	Probability of Default (PD) Loss Given Default (LGD) Credit Conversion Factor (CCF)	Advanced IRB	Approved or 06/2014
TSB	Retail	Consumer Loans scoring	Probability of Default (PD) Loss Given Default (LGD) Credit Conversion Factor (CCF)	Advanced IRB	Approved or 10/2014
TSB	Retail	Cards scoring	Probability of Default (PD) Loss Given Default (LGD) Credit Conversion Factor (CCF)	Advanced IRB	Approved or 06/2015
TSB	Retail	Current account scoring	Probability of Default (PD) Loss Given Default (LGD) Credit Conversion Factor (CCF)	Advanced IRB	Approved or 06/2015

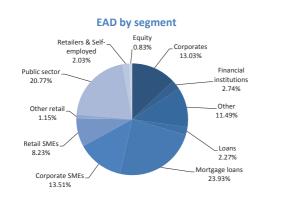

Distribution of portfolios approved by the supervisor for the use, or the application of internal ratings based methods (IRB).

Data from models approved by the supervisor at 31/12/2015.

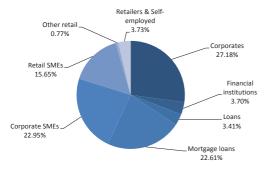

Statutory information

The Group carries out frequent backtesting of its IRB (Internal Ratings Based) models, at least on an annual basis. These exercises are independently reviewed by the Internal Validation unit and reported for their monitoring to the internal governing bodies, such as the Technical Risks Committee or the Risk Commission (delegated committees). Additionally, the backtesting results that affect the risk parameters, and the main conclusions from these results, taking into account the criteria established by the EBA in its disclosure Guidelines, are included in the annual Pillar III Disclosures report.

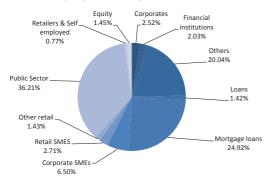

The distribution, based on the calculation methods of exposures and risk weighted assets for different portfolios, is shown below:

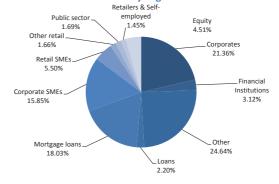

EAD per segment using the IRB method

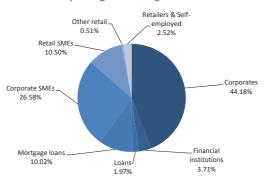

EAD by segment using the standard method

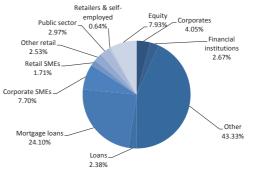

**RWA by segment** 

RWA per segment using the IRB method

The Leverage Ratio aims to strengthen capital requirements with a supplementary measure not linked to the level of risk. The leverage ratio is the ratio between qualifying Tier 1 capital resources (Tier 1) and exposure.

The CRR sets forth a leverage ratio, the fulfilment of which is mandatory as of 1 January 2018. Previously, a definition and calibration period between 2014 and 2017 was set forth, during which institutions are required to disclose their leverage ratio and send information relative to the ratio to the supervisor who, based on the results, shall implement amendments as they see fit for their entry into force. At present, the bank reports to the supervisor on a quarterly basis and a reference level of 3% is considered.

The level of exposure is calculated in line with the definition contained in Commission Delegated Regulation (EU) 62/2015. The leverage ratio at 31 December 2016 and 31 December 2015 is shown below:

	2016	2015
Tier 1 capital	10,332,360	10,209,470
Exposure	217,918,574	210,369,669
Leverage ratio	4.74%	4.85%

# Note 6 – Fair value of assets and liabilities

## Financial assets and liabilities

The fair value of a financial asset or liability at a given date is understood as the amount at which it could be sold or transferred, respectively, at that date, between independent and knowledgeable parties acting freely and prudently and without coercion in market conditions. The most objective and commonly used reference for the fair value of a financial asset or liability is the price that would be paid for it in an organised, transparent and deep market ("quoted price" or "market price").

When there is no market price for a particular financial asset or liability, the fair value is estimated from the values established for similar instruments in recent transactions or, failing that, by using mathematical valuation models suitably tested by the international financial services community. When using these models, the specific characteristics of the financial asset or liability being valued are taken into account, particularly the different types of risk that may be associated with them. The above notwithstanding, the limitations inherent in the valuation models that have been developed and possible inaccuracies in the assumptions and parameters required by these models may result in the estimated fair value of a financial asset or liability not precisely matching the price at which the asset or liability could be delivered or settled as of the valuation date.

The fair value of financial derivatives quoted on an active market is the daily market price.

In the case of instruments for which quoted prices cannot be determined, prices are estimated using internal models developed by the bank, most of which take data based on observable market parameters as significant inputs. Otherwise, the models make use of other inputs which rely on internal assumptions based on generally accepted practices within the financial services community.

For financial instruments the fair value measurements disclosed in the financial statements are classified according to the following fair value levels:

- Level I: Fair values are obtained from the (unadjusted) prices quoted on active markets for that instrument.
- Level II: Fair values are obtained from the prices being quoted on active markets for similar instruments, the prices of recent transactions, expected flows or other measurement techniques for which all significant inputs are based on directly or indirectly observable market data.

• Level III: Fair values are obtained through measurement techniques for which some significant inputs are not based on observable market data.

Set out below are the main valuation methods, assumptions and inputs used when estimating the fair value of financial instruments classified in Levels 2 and 3, according to the type of instrument concerned:

Level 2 financial instruments	Valuation methods	Main assumptions	Main inputs used
Debt securities	Present value method	Calculation of the present value of financial instruments as the present value of future cash flows (discounted at market interest rates), taking into account: - An estimate of pre-payment rates - Issuers' credit risk	- Issuer credit spreads - Observable market interest rates
Capital instruments	Sector multiples (P/BV)	Based on the CNAE that is best adjusted to the company's main activity, the P/BV multiple obtained in the comparison is applied.	- CNAE's - Share price listings in organised markets
	Black-Scholes model (analytic/semi- analytic formulae)	For equity derivatives, inflation, currencies or commodities: - Black-Scholes assumes a lognormal process of forw ard rates taking into account potential convexity adjustments	For equity derivatives, inflation, currencies or commodities: - Forw ard structure of the underlying
Derivatives (*)		Black-Scholes model: a lognormal distribution is assumed for the underlying asset with volatility depending on the term. - SABR: stochastic volatility model.	asset, given by market data (dividends, sw aps points, etc.) - Option volatility surfaces For interest rate derivatives: - Interest rate time structure - Underlying Options asset volatility
F- di - : - 1	For interest rate derivatives: - Standard Model - Libor Market Model	These models assume that: - The standard and shifted model allow negative rates - Forward rates in the term structure of the interest rate curve are perfectly correlated	Surfaces on Libor rate (caps) and Sw aps rates (sw aptions) - Probability of default for CVA and DVA calculation (**) For credit derivatives:
	For credit derivatives: - Intensity models	These models assume a default probability structure resulting from term-based default intensity rates.	- Credit Default Swaps (CDS) values - Historic credit spread volatility

(\*) Due to Banco Sabadell's reduced net position, it is estimated that the funding value adjustment (FVA) has a non-material impact on the valuation of derivatives.

(\*\*) For CVA and DVA calculation fixed severities at 60% have been used, corresponding to the market standard for senior debt. Average future exposures, positive and negative, have been estimated using market models, libor for rates and black for currencies, using market inputs. The probability of default for customers without quoted debt securities or CDS were obtained from the internal rating model, and for Banco Sabadell Banco Sabadell those obtained from the CDS quotation have been used.

Level 3 financial instruments	Valuation methods	Main assumptions	Main non-observable inputs
Debt securities	Present value method	Calculation of the present value of financial instruments as the present value of future cash flows (discounted at market interest rates), taking into account: - An estimate of pre-payment rates - Issuers' credit risk - Current market interest rates	- Estimated credit spreads of issuer or a similar issuer.
Capital instruments	Discounted cash flow method	Calculation of the present value of future cash flows discounted at market rate adjusted for risk (CAPM method), taking into account: - Estimated cash flows for the company - Sector risk for the company - Macroeconomic inputs	- The entity's business plans - Risk premiums for the company's sector -Adjustment for systematic risk (Beta parameter)
	For equity derivatives, currencies or commodities: - Monte Carlo simulations	Black-Scholes model: a lognormal distribution is assumed for the underlying asset with volatility depending on the term. - SABR: stochastic volatility model.	For equity derivatives, inflation, currencies or commodities: - Historical volatilities - Historical correlations - PD for calculation CVA and DVA (a)
Derivatives (*)	For credit derivatives: - Intensity models	These models assume a structure of probabilities of default due to default intensity rates due to default	For credit derivatives: - Estimated credit spreads of issuer or a similar issuer. - Historical volatility of credit spreads
	For interest-rate derivatives: - Standard model - Libor Market Model	These models assume that: - The standard model allows negative rates - The forward rates in the term structure of the interest rate curve are perfectly correlated	For interest-rate derivatives: - PD for calculation CVA and DVA (a)

(\*) Due to Banco Sabadell's net position, it is estimated that the funding value adjustment (FVA) has a non-material impact on the valuation of derivatives.

(\*\*) For the calculation of CVA and DVA fixed severities at 60% have been used, which correspond to the market standard for senior debt. The positive and negative future average exposures were estimated using market inputs. The probability of default for customers without quoted debt securities or CDS were obtained from the internal rating model and for Banco Sabadel those obtained from the CDS quotation have been used.

#### Determination of the fair value of financial instruments

A comparison between the value at which the group's financial assets and liabilities are recognised on the accompanying consolidated balance sheets and the related fair value is as follows:

Thousand	euro
----------	------

		20:	16	20:	15	
		Accounting		Accounting

Thousand euro 2016 2015 Accounting Accounting Note balance Fair value balance Fair value Liabilities: Financial liabilities held for trading 1,975,806 1,636,826 1,636,826 1.975.806 Financial liabilities designated at fair value through profit or loss 19,20,21 y 22 192.011.024 193.175.272 189,468.677 190.919.750 Financial liabilities at amortised cost 1,105,806 1,105,806 681,461 681,461 Derivatives - hedge accounting 13 Fair value changes of the hedged items in portfolio 12 64,348 64,348 16,330 16,330 hedge of interest rate risk Total liabilities 195,156,984 196,321,232 191,803,294 193,254,367

In relation to financial instruments whose carrying amount differs from their fair value, the latter has been calculated as follows:

- The fair value of "Cash and balances with central banks" has been considered to be the carrying amount, as these are mainly short-term balances.

- The fair value of "Loans and receivables" and "Financial liabilities at amortised cost" has been estimated by the discounted cash flow method, using market interest rates at the end of each year.

-The heading "*Fair value changes of the hedged items in portfolio hedge of interest rate risk*" on the accompanying consolidated balance sheets records the difference between the carrying amount of the deposits covered (recorded in "Loans and receivables") and the fair value calculated using internal models and observable market variables.

The following table presents the main financial instruments recognised at fair value in the accompanying consolidated balance sheets, broken down according to the valuation method used when estimating their fair value:

			2016

Derivatives without a collateral contract (CSA) include credit valuation adjustment (CVA) and debit valuation adjustment (DVA) in their fair value. The fair value of these derivatives represents 7.16% of the total, and their adjustment for credit and debit risks represents 4.86% of their fair value.

The movements in the balances of the financial assets and liabilities classified as Level 3 that are disclosed in the accompanying consolidated balance sheets are as follows:

	Asset	Liability
Balance at 31 December 2014	880,713	409,262
Valuation adjustments recorded to profit and loss (*)	35,758	75,980
Valuation adjustments not recorded to profit and loss	69,638	-
Purchases, sales and write-offs	(199,051)	(58,725)
Net additions/(exits) on Level 3	181,672	6,117
Exchange differences and other	(1,125)	1,604
Balance at 31 December 2015	967,605	434,238
Valuation adjustments recorded to profit and loss (*)	-	-
Valuation adjustments not recorded to profit and loss	-	-
Purchases, sales and write-offs	61,447	(24,339)
Net additions/(exits) on Level 3	(773,540)	(409,899)
Exchange differences and other	(4,705)	-
Balance at 31 December 2016	250,807	-

(\*) Relates to securities kept on the balance sheet

Financial instruments that were transferred between valuation levels during 2016 present the following balances in the accompanying consolidated balance sheet at 31 December 2016:

				20	016		
	From:	Leve	el 1	Level 2		Level 3	
-	Note To:	Level 2	Level 3	Level 1	Level 3	Level 1	Level 2
Assets:							
Financial assets held for trading		-	-	-	-	-	634,920
Financial assets designated at fair value through profit or loss		-	-	-	-	-	
Available-for-sale financial assets		-	-	-	-	-	
Derivatives	10	-	-	-	-	-	138,620
Liabilities							
Financial liabilities held for trading		-	-	-	-	-	226,050
Financial liabilities designated at fair value through profit or loss		-	-	-	-	-	
Derivatives-hedge accounting	13	-	-	-	-	-	183,849
Total		-	-	-	-	-	1,183,439

Transfers from Level 3 to Level 2 are due to an assessment made of the impact of non-observable market data on the valuation of these instruments and, as such valuation is residual, it has been deemed appropriate to transfer these instruments to Level 2.

				2015

At 31 December 2015, the effect of replacing the main assumptions used in the valuation of Level 3 financial instruments with other reasonably possible assumptions, taking the highest value (most favourable assumption) or lowest value (least favourable assumption) in the range that is considered likely, is not significant because the amount of financial instruments classified as Level 3 is non-material.

At 31 December 2016 this estimate has not been presented, as the instruments considered as level 3 mainly correspond to the investment the entity holds in the Management Company for Assets Arising from the Banking Sector Reorganisation (SAREB), and that, due to the singularity of this investment it has been valued at its purchase price after applying impairment adjustments where necessary (see Note 9).

At 31 December 2016, income from sales of real estate assets classified as Level 3, recognised in the accompanying profit and loss statement, was not material.

#### Loans and financial liabilities designated at fair value through profit or loss

At 31 December 2016 and 2015, there were no loans or other financial liabilities at fair value other than those recognised under "Financial assets held for trading – Loans and advances - Customers", "Other assets designated at fair value through profit or loss" and "Other liabilities designated at fair value through profit or loss" in the accompanying balance sheets.

#### Financial instruments at cost

At 31 December 2016 and 2015 there were equity instruments which were recorded at cost in the consolidated balance sheets because their fair value could not be estimated in a sufficiently reliable manner. This was because they pertained to investments in companies that are not quoted in organised markets and are not unique in nature. As mentioned above, this is how the interest in SAREB has been recorded (see Note 9).

At the end of both years there were no equity derivatives such as underlyings and equity interest in discretionary benefits in some companies.

During 2016, there were no sales of financial instruments recorded at cost.

#### Non-financial assets

#### Real estate assets

At 31 December 2016 and 2015, net accounting values of real estate assets do not differ significantly from the fair values of these assets (see Notes 14, 16 and 18).

The selection criteria for valuation suppliers and the update of appraisals are defined in the section "Guarantees", in Note 1.3.4. of the present consolidated annual accounts.

The valuation techniques are generally used by all appraisal companies based on the type of each real-estate asset.

Due to a regulatory requirement, in the valuation techniques used, the valuation companies maximise the use of observable market data and other factors which would be taken into account by market operators when setting prices, endeavouring to keep the use of subjective considerations and non-observable or non-verifiable data to a minimum.

The following measurement hierarchy levels would correspond to the main valuation methods used:

Level 2

- <u>Comparison method</u> - applicable to all kinds of properties provided that there is a representative market of comparable properties and sufficient data is available on transactions that reflect the current market situation.

- <u>Rental update method</u> - applicable when the valued property generates or may generate income and there is a representative market of comparable data.

- <u>Statistical model</u> – This model adjusts the value of the assets based on the date of acquisition and their location, updating the value in accordance with price trends in the area concerned as from the date of purchase. To this end, it includes statistical information on price trends in all provinces provided by external valuation companies and demographic data from the Spanish National Statistics Institute to calculate sensitivity at a municipality level. At the same time, the value obtained is adjusted based on the degree of maturity (finished product, development in progress, plots or land under management) and use (residential, industrial, etc.) of the asset.

#### Level 3

- <u>Cost method</u> – applicable to determine the value of buildings being planned, under construction or undergoing renovations.

- <u>Residual method</u> – in the present macroeconomic climate, the dynamic calculation procedure is being used preferentially in new land valuations to the detriment of the statistical procedure, which is reserved for specific cases in which the envisaged time frames for project completion are in line with the relevant regulations.

Depending on the type of asset, the methods used in the valuation of the Group's portfolio are the following:

- *Completed buildings*: valued in comparable terms, based on updates to income or the statistical model (Level 2).

- *Buildings under construction*: valued using the cost method as a sum of the land value and the value of the work carried out (Level 3).

- Land: valued using the residual method (Level 3).

#### Calculation of fair value

Thousand euro

The following table shows the main real estate assets broken down using the valuation method used in their fair value estimate:

	Fair Value						
ffices, retail outlets and other properties and and building plots 'ork in progress	Level 1 Level 2 Leve	Level 3	Total				
Housing	-	2,704,401	-	2,704,401			
Offices, retail outlets and other properties	-	3,456,469	-	3,456,469			
Land and building plots	-	-	2,041,785	2,041,785			
Work in progress	-	-	387,736	387,736			
Total assets	-	6,160,870	2,429,521	8,590,391			

Significant non-observable variables used in valuations classed on Level 3 were developed not by the Group but by the independent valuation companies that performed the appraisals. Due to the general use of appraisals, the valuation techniques of which are clearly defined in regulations on property valuations, the unobservable variables used reflect the assumptions which are habitually used by all appraisal companies. The Group does not have, at 31 December 2016 or 2015, the quantification of these unobservable variables used in the

appraisals. Therefore, as such valuations were not performed internally, it has not been considered necessary to conduct a sensitivity assessment.

The movements of balances during 2016 classified as Level 3 are shown below:

Thousand euro

	Housing		Land, building plots and work in progress
Balance at 31 December 2015	-	-	2,840,000
Purchases	-	-	402,403
Sales	-	-	(378,629)
Impairments recorded on income statement (*)	-	-	(318,623)
Net additions/(exits) on Level 3	-	-	(115,630)
Balance at 31 December 2016	-	-	2,429,521

(\*) Relates to assets kept on the balance sheet at 31 December 2016 and 2015

At 31 December 2016, income from sales of real estate assets classified as Level 3, recognised in the accompanying profit and loss statement, was not material.

The fair value of real estate assets valued by valuation companies, portfolios of foreclosed assets and own-use assets classified in Non-current assets and disposal groups classified as held for sale, investment properties and inventories in 2016 is as follows:

Thousand euro

	Non-current assets held for sale		Tangible assets

## Note 7 – Cash and cash balances at central banks and other demand deposits

The composition of this asset heading in the consolidated balance sheets at 31 December 2016 and 2015 was as follows:

Thousand	euro

	2016	2015
By nature:		
Cash	759,357	734,362
Cash balances at central banks	10,122,725	5,405,097
Other demand deposits	806,168	1,204,022
Total	11,688,250	7,343,481
By currency:		
In euro	6,603,951	2,522,709
In foreign currency	5,084,299	4,820,772
Total	11,688,250	7,343,481

Average annual interest rates on deposits in credit institutions for 2016 and 2015 were 0.30% and 0.57% respectively.

### Note 8 – Debt securities

Debt securities reported in the consolidated balance sheet at 31 December 2016 and 2015 are analysed below:

Thousand euro
---------------

	2016	2015
By heading		
Financial assets held for trading	1,639,097	792,460

Accumulated capital gains recognised in equity at year end	347,725	720,085

As regards the portfolio of investments held to maturity, it is broken down as follows:

Thousand euro		
	2016	2015
Central banks	-	-
General governments	4,598,190	-
Credit institutions	-	-
Other sectors	-	-
Impairment adjustments	-	-
Total	4,598,190	-

In the second half of 2016, certain debt securities were reclassified from the heading "Available-for-sale financial assets" to the heading "Investments held to maturity". This reclassification took place at the end of the two years of penalisation set forth in standard IAS-39 (a penalisation which entailed not being able to hold the portfolio to maturity due to the significant sales produced during 2013) and given that the Group's intended way of managing these securities was to hold them to maturity.

# Note 9 – Equity instruments

Equity instruments reported in the consolidated balance sheet at 31 December 2016 and 2015 are analysed below:

Thousand euro

	2016	2015
By heading:		
Financial assets held for trading	10,629	11,212
Financial assets designated at fair value through profit or loss	34,827	77,328
Available-for-sale financial assets	597,809	572,730
Total	643,265	661,270
By nature:		
Resident sector	361,290	168,931
Credit institutions	9,418	9,207
Other	351,872	159,724
Non resident sector	148,839	324,737
Credit institutions	95,955	227,247
Other	52,884	97,490
Equity investments in investment funds and companies	133,136	167,602
Total	643,265	661,270
By currency:		
In euro	496,356	514,216
In foreign currency	146,909	147,054
Total	643,265	661,270

At 2016 year-end there were no investments in quoted equity instruments for which their market price has not been considered as a reference of their fair value.

Financial assets designated at fair value through profit or loss consisted of investments associated with unitlinked life policies sold through the subsidiary Assegurances Segur Vida, S.A.

Details of equity instruments recorded under the heading Available-for-sale financial assets are as follows:

Thousand euro

	Note	2016	2015
Acquisition cost		532,378	452,213
Fair value		597,809	572,730
Accumulated losses recognised in equity at year end		(2,333)	(1,236)
Accumulated capital gains recognised in equity at year end		67,764	121,753
Losses recorded as impairment in profit and loss for the year	37	(112,806)	(134,109)

During the first half of 2016, Banco Sabadell and its investee, BanSabadell Holding, S.L. reduced the value of the interest they held in Banco Comercial Português, S.A. ("Millennium BCP") for the amount of 92,324 thousand euros (71,215 thousand euros in 2015).

In December 2016 both entities sold 38,577,892 Millennium BCP shares, representing 4.08% of its share capital and its voting rights. The shares were sold at a price of 1.15 euros per share, which represented a total of 44,364 thousand euros for the block of shares sold, and the overall result of the transaction was a loss of 8,375 thousand euros.

After this sale, Banco Sabadell is a direct owner of 1,353,619 Milennium BCP shares, representing 0.14% of its capital valued at 1,450 thousand euros.

On the other hand, during 2016 Banco Sabadell increased the cost of its interest by 143,550 thousand euros in the Management Company for Assets Arising from the Banking Sector Reorganisation (SAREB), as a consequence of the execution of the capital increase to convert the "Unsecured Convertible Subordinated Debentures 2013".

At 31 December 2016, the impairment of this interest amounted to 56,756 thousand euros. Subsequently, it is valued at 170,174 thousand euros (26,624 thousand euros in 2015).

On 2 November 2015, Visa Inc. announced a tender offer to purchase 100% of Visa Europe shares, which materialised on 21 June 2016. The consideration for shares owned by the Group consisted in the up-front delivery of a cash amount plus the delivery of convertible preferred shares of Visa Inc., as well as a cash amount payable within 3 years. The recorded capital gain amounted to €109 million.

At 31 December 2016 the valuation of the interest held in Visa Inc has been updated, and 3 million euros have been offset by other comprehensive income in the statement of equity.

## Note 10 – Asset and liability derivatives held for trading

The breakdown by transaction types of trading derivatives balances on the asset and liability sides of the consolidated balance sheet at 31 December 2016 and 2015 is as follows:

	2016		2015	
	Assets	Liabilities	Assets	Liabilities
Securities risk	169,449	170,058	259,555	233,732
Interest rate risk	1,122,057	1,137,713	916,789	961,604
Currency risk	467,291	530,860	312,200	269,290
Other kinds of risk	75,698	77,283	19,902	20,296
Total	1,834,495	1,915,914	1,508,446	1,484,922
By currency:				
In euro	1,609,077	1,738,788	1,367,187	1,342,124

Total	1,834,495	1,915,914	1,508,446	1,484,922

Fair values of derivatives at 31 December 2016 and 2015 are broken down below, by type of derivative instrument:

Thousand euro 2016 2015 Assets Derivatives held for trading 1,834,495 1,508,446 Swaps, CCIRS, Call Money Swap 1.128.670 910.320 Exchange-rate options 30,068 22,631 Interest-rate options 54,365 56,296 Index and securities options 184,169 279,457 Currency forwards 437,223 239,742 Total assets held for trading 1,834,495 1,508,446 Liabilities Derivatives held for trading 1,915,914 1,484,922 Swaps, CCIRS, Call Money Swap 1,125,749 894,460 Exchange-rate options 31,323 29,298 Interest-rate options 100,774 103,588 254,027 Index and securities options 186,571 Currency forwards 471,497 203,549 Total liabilities held for trading 1,915,914 1,484,922

## Note 11 – Loans and advances

### Central banks and Credit institutions

The composition of the headings "*Loans and advances - Central banks*" and "*Loans and advances - Credit institutions*" in the consolidated balance sheets at 31 December 2016 and 31 December 2015 is as follows:

	2016	2015
By heading:		
Financial assets held for trading	-	-
Financial assets designated at fair value through profit or loss	-	-
Loans and receivables	4,291,996	5,002,066
Total	4,291,996	5,002,066
By nature:		
Deposits with agreed maturity	2,320,133	1,311,414
Assets acquired under repurchase agreements	1,704,404	3,101,716
Hybrid financial assets	89	3,176
Other	269,122	583,416
Doubtful assets	368	566
Impairment adjustments	(6,681)	(1,801)
Other valuation adjustments (interest, fees and commissions, other)	4,560	3,579
Total	4,291,996	5,002,066
By currency:		
In euro	3,279,828	4,720,693
In foreign currency	1,012,168	281,373
Total	4,291,996	5,002,066

### **Customer base**

The composition of the heading "*Loans and advances - Customers*" (General governments and Other sectors) of the consolidated balance sheets at 31 December 2016 and 31 December 2015 is as follows:

Thousand	euro

	2016	2015
By heading:		
Financial assets held for trading	-	-
Financial assets designated at fair value through profit or loss	-	-
Loans and receivables	145,173,865	146,815,737
Total	145,173,865	146,815,737
By nature:		
On-demand loans and other	6,801,456	7,206,937
Trade credit	5,530,045	5,665,062
Finance leases	2,168,803	2,070,028
Secured loans	90,693,505	92,739,951
Repos	7,930	728,475
Other term loans	35,363,490	32,685,849
Doubtful assets	9,641,526	12,470,413
Impairment adjustments	(4,921,348)	(6,609,577)
Other valuation adjustments (interest, fees and commissions, other)	(111,543)	(141,401)
Total	145,173,865	146,815,737
By sector:		
General governments	9,683,466	8,954,620
Other sectors	130,881,764	132,141,682
Doubtful assets	9,641,526	12,470,413
Impairment adjustments	(4,921,348)	(6,609,577)
Other valuation adjustments (interest, fees and commissions, other)	(111,543)	(141,401)
Total	145,173,865	146,815,737
By currency:		
In euro	98,615,373	100,965,967
In foreign currency	46,558,492	45,849,770
Total	145,173,865	146,815,737
By geography:		
Spain	98,965,788	104,752,006
Rest of European Union	39,707,952	36,417,861
Latin America	3,519,712	2,351,185
North America	6,431,602	9,235,497
Other OECD countries	245,475	149,741
Rest of the world	1,224,683	519,024
Impairment adjustments	(4,921,347)	(6,609,577)
	145,173,865	146,815,737

Average annual interest rates on customer lending on the asset side of the balance sheet for 2016 and 2015 were 3.16% and 3.27 % respectively (2.94% in 2016 excluding TSB).

The heading "*Loans and advances*" on the consolidated balance sheets include certain assets pledged in financing operations, i.e. offered as collateral or guarantees for certain liabilities. For more information, see Note 4. Financial risk management – Credit risk.

### **Finance leases**

Items sold under finance leases are recorded at the amortised cost of the fees payable by the lessee, plus the secured and unsecured residual value, excluding financial expenses and value added tax. Their composition is as follows:

	2016	2015
Finance leases		
Total gross investment	2,137,815	2,083,279
Of which: Contingent lease payments recognised in income	74,007	77,630
Unearned financial income	245,716	272,662
Unguaranteed residual value	139,827	126,034
Impairment adjustments	38,881	68,509

A continuación se presenta un detalle por plazos del valor actual de los pagos futuros mínimos a recibir por el grupo durante el período de obligado cumplimiento (al considerarse que no se van a ejercitar prórrogas ni opciones de compra existentes).

Thousand euro

	Up to 1 year	1-5 years Mor	e than 5 years	Total
Minimum lease payments receivable				
Mandatory minimum lease payments receivable	510,790	) 1,312,388	456,022	2,279,200

### Unimpaired financial assets past-due

The credit balance of non-doubtful lending to customers past-due and pending collection at 31 December 2016 amounts to  $\notin$  222,083 thousand ( $\notin$ 161,702 thousand at 31 December 2015). Of this total, over 75% of the balance at 31 December 2016 (60% of the balance at 31 December 2015) has reached maturity over a term not exceeding one month.

### Doubtful assets

Thousand ouro

Assets recognised as doubtful in the different balance sheet asset headings at 31 December 2016 and 2015 were as follows:

	Note	2016	2015
Debt securities	9	9,030	11,422
Loans and advances			
Customers	9,64	1,526	12,470,413
Central Banks and Credit Institutions		368	566
Total	9,650	),925	12,482,401
By sector:			
General governments	15	3,863	11,458
Central Banks and Credit Institutions	•	7,276	566
Other private sectors	9,629	9,785	12,470,377
Total	9,650	,925	12,482,401

The movements of doubtful assets is as follows:

Balance at 31 December 2014	15,726,087
Addition of TSB (*)	252,697
Additions	1,984,531
Disposals	(4,443,097
Amortisations	(1,037,817
Balance at 31 December 2015	12,482,401
Additions	1,755,062
Disposals	(4,058,422
	(528,116
Amortisations	

(\*) See note 2.

The breakdown of doubtful assets by type of guarantee at 31 December 2016 and 2015 is as follows:

Thousand euro		
	2016	2015
Secured with a mortgage (*)	5,694,291	7,308,197
Other collateral (**)	1,838,432	2,878,060
Rest	2,118,202	2,296,144
Total	9,650,925	12,482,401

(\*) Assets secured with a mortgage with an outstanding risk below 100% of their valuation amount.

 $(\ensuremath{^{\ast\ast}})$  includes the rest of assets secured with collateral.

The breakdown of the balance of doubtful assets by geography at 31 December 2016 and 2015 is as follows:

Thousand euro		
	2016	2015
Spain	9,070,695	11,699,177
Rest of European Union	479,338	589,474
Ibero-America	33,933	101,482
North America	25,631	42,602
Rest of OECD	6,471	9,507
Rest of the world	34,857	40,159
Total	9,650,925	12,482,401

Financial income on impaired financial assets incurred but not recorded in the consolidated income statement amounts to €610,673 thousand at 31 December 2016 and to €723,241 thousand at 31 December 2015.

The movements in impaired financial assets written off because their recovery is regarded as unlikely is as follows:

Balance at 31 December 2014	5,610,127
Scope additions / exclusions (*)	
Addition of TSB (*)	118,093
Additions	1,124,696
Charged to impairment adjustments	1,037,225
Charged directly to the income statement	43,999
Overdue unpaid items	43,472
Other items	-
Disposals	(897,205)
Recovery of principal in cash (**)	(100,013)
Recovery of overdue unpaid items in cash (**)	(18,865)
Acquisitions of tangible assets and debt remission	(19,714)
Expiry	-
For debt refinancing or restructuring	-
Due to bad-debt write off	(758,613)
Exchange differences	
Balance at 31 December 2015	5,955,711
Additions	648,028
Charged to impairment adjustments	612,583
Charged directly to the income statement	1,296
Overdue unpaid items	33,591
Other items	558
Disposals	(1,327,929)
Recovery of principal in cash (**)	(109,360)
Recovery of overdue unpaid items in cash (**)	(64,960)
Acquisitions of tangible assets and debt remission	(92,933)
Expiry	-
For debt refinancing or restructuring	-
Due to bad-debt write off	(1,060,676)
Exchange differences	(26,127)
Balance at 31 December 2016	5,249,683

(\*) See note 2.

(\*\*) Disposals due to recovery of principal in cash and recovery of overdue unpaid items in cash are reflected in the heading "Impairment losses on financial assets". (See Note 37).

### Value adjustments

The amounts of value adjustments due to asset impairment under the different balance sheet asset headings at 31 December 2016 and 2015 are as follows:

	2016	2015
Debt securities	12,001	13,117
Loans and advances		
Customers	4,921,348	6,609,577
Central Banks and Credit Institutions	6,681	1,801
Total	4,940,030	6,624,495

The bank considers that the Group's value adjustments due to asset impairment and its provisions are sufficient to absorb any possible losses resulting from its assets and the outcome of any open contingency that the bank may have.

Impairment adjustments include  $\leq$ 410 million to cover contingencies which have arisen related to mortgage floor clauses. Excluding the described impairment, the NPL coverage ratio would stand at 47.34%, and the coverage ratio of problematic assets would stand at 47.45% (47.25% and 47.40%, respectively, excluding TSB).

Details of the value adjustments made for credit risk hedging and their cumulative amount at the start and at the end of the year is as follows:

Determined	Determined	IDND		
		IBNR coverage (***)	Country risk	Total
1,399,618	5,194,280	1,136,010	3,761	7,733,669
-	-	-	-	-
1,873	76,755	183,053	-	261,681
781,673	155,376	192,533	653	1,130,235
181,108	(2,496,182)	(193,239)	-	(2,508,313)
(761,152)	(1,205,625)	(282,651)	-	(2,249,428)
942,260	(1,290,557)	89,412	-	(258,885
-	1,142	5,940	141	7,223
2,364,272	2,931,371	1,324,297	4,555	6,624,495
86,581	190,444	103,911	(1,965)	378,971
(1,128,701)	(671,925)	(261,218)	5,414	(2,056,430)
(967,417)	(685,173)	(241,775)	-	(1,894,365
(161,284)	13,248	(19,443)	5,414	(162,065

() See note 2.

Thousand euro

(\*\*) This figure, impaired financial assets written off against income and bad-debt recoveries are reflected under the heading "Impairment losses on financial assets" (see Note 37).

(\*\*\*) Corresponds to the transfer of 662,065 thousand of value adjustments recognised for credit risk hedging to non-current assets held for sale (see note 14) and investment properties (see note 16).

The breakdown of value adjustments due to asset impairment by geography at 31 December 2016 and 2015 is as follows:

	2016	2015
Spain	4,657,319	6,238,422
Rest of the European Union	220,814	309,367
Ibero-America	38,610	49,408
North America	2,317	7,057
Rest of OECD	2,998	4,630
Rest of the world	17,972	15,611
Total	4,940,030	6,624,495

### Note 12 – Fair value changes of the hedged items in portfolio hedge of interest rate risk

The balances under this heading on the asset and liability sides of the consolidated balance sheet correspond to gains and losses on items covered by fair value hedges of the interest rate risk on portfolios of financial instruments, almost entirely offset by gains and losses associated with their corresponding hedging derivative.

# Note 13 – Derivatives – Asset and liability hedge accounting

The composition of the fair values of these headings in the consolidated balance sheets at 31 December 2016 and 2015, in terms of the type of hedging carried out, was as follows:

	2016		2015	
	Assets	Liabilities	Assets	Liabilities
Micro-hedges:				
Fair value hedges	147,563	54,611	171,755	379,355
Cash flow hedges	339,357	216,022	436,441	161,281
Hedge of net investment in foreign operations	26,934	-	13,383	173
Macro-hedges:				
Fair value hedges	21,306	785,819	79,234	76,857
Cash flow hedges	-	49,354	-	63,795
Total	535,160	1,105,806	700,813	681,461
By currency:				
In euro	379,914	484,487	537,267	353,525
In foreign currency	155,246	621,320	163,546	327,936
Total	535,160	1,105,806	700,813	681,461

The bank enters into interest rate hedging contracts as part of its policy for managing interest rate risk (see Note 4 on financial risk management).

The main types of hedging instrument used are described below:

a) Fair value hedges

These are hedges which cover exposure to changes in the fair value of a specific type of risk, with microhedging operations being those covering the risk of an asset or liability operation, and macro-coverage being those covering a portfolio of financial assets or financial liabilities.

The Group classifies in this category the derivatives contracted to mitigate the interest rate risk in fixed-rate asset and liability transactions.

The derivatives used in such hedging mainly consist of interest rate swaps. The composition of these hedges is as follows:

- Macro-hedges of liabilities at a fixed rate, including the financing operations of the entity in capital markets and operations involving deposits with agreed maturity contracted with customers. The fair value of the swaps included in these hedges, at 31 December 2016 and 31 December 2015, amounts to a credit balance of €72 thousand and €32,740 thousand respectively.
- Macro-hedges of fixed-rate debt securities classified in the available-for-sale portfolio. The fair value of the swaps included in these hedges, at 31 December 2016 and 31 December 2015, amounts to a credit balance of €741,648 thousand and €16,683 thousand respectively.
- Macro-hedges of mortgage loans granted to customers. The fair value of the swaps included in these hedges amounts to €22,792 thousand at 31 December 2016 (€971 thousand at 2015 year-end).
- Micro-hedges of fixed-rate liability transactions consisting of deposits with agreed maturity contracted with customers and issued subordinated debt. The fair value of the swaps included in these hedges, at 31 December 2016 and 31 December 2015, amounts to a credit balance of €2,666 thousand and €22,853 thousand respectively.
- Micro-hedges of fixed-rate liability transactions consisting of customer sight accounts. The fair value of the swaps included in these hedges amounts to a debit balance of €14,905 thousand at 31 December 2016 (€271 thousand at 2015 year-end).

• Micro-hedging of fixed-rate asset transactions. The fair value of the swaps included in these hedges, at 31 December 2016 and 31 December 2015, amounts to a credit balance of €8,547 thousand and €323,165 thousand respectively.

Gains and losses recognised during the year on hedging instruments and on hedged items are shown in the following table:

Thousand euro	20	2016		15
	Hedging instruments	Hedged items	Hedging instruments	Hedged items
Micro-hedges	(36,928)	33,031	(25,763)	24,604
Fixed-rate assets	(38,816)	35,366	(16,526)	16,604
Capital markets	(2,327)	2,607	(5)	(570)
Fixed-rate liabilities	4,215	(4,942)	(9,232)	8,570
Macro-hedges	(248,285)	277,980	(15,053)	24,252
Capital markets and fixed-rate liabilities	32,129	5,958	6,338	3,411
Fixed-rate assets	(280,414)	272,022	(21,391)	20,841
Total	(285,213)	311,011	(40,816)	48,856

#### b) Cash flow hedges

These hedges cover changes in cash flows from financial instruments associated with a specific risk or a transaction which is highly likely to occur.

The derivatives used in such hedging mainly consist of forward interest rate swaps and transactions. The composition of the main hedges is as follows:

- Micro-hedges for interest rates on future transactions involving fixed income securities. The entity designates as hedging items the derivative agreements which will be settled at their gross amount through the delivery of the underlying asset (according to the contracted price) which, in accordance with the implementation guidelines in IAS 39, may be considered as cash flow hedges with respect to the consideration to be settled in a future transaction which is to take place as a result of the settlement of the derivative itself in gross terms. If the derivative had not been contracted, the Group would be exposed to changes in the purchase price. The fair value of forward securities contracted at 31 December 2016 and 31 December 2015 amounted to a debit balance of €44,332 and a €10,284 thousand, respectively.
- Micro-hedges of interest rates on bonds tied to inflation. The bank has contracted financial swaps to cover the variation in future cash flows to be settled with inflation-linked bonds. The fair value of these swaps at 31 December 2016 and 31 December 2015 amounted to a credit balance of €15,580 thousand and a debit balance of €280,814 thousand, respectively.
- Macro-hedges of cash flows, the purpose of which is to reduce the volatility of the buy-sell spread due to interest rate fluctuations over a one-year time horizon. Thus, macro-hedges cover future cash flows based on the net exposure of a portfolio consisting of highly probable liabilities with a similar exposure to interest rate risk. Interest rate swaps are the hedging instruments used for this purpose. The fair value of these swaps at 31 December 2016 and 31 December 2015 amounted to a credit balance of €49,354 thousand and €60,211 thousand, respectively.
- Micro-hedges of securitisation bonds denominated in foreign currency to reduce volatility in the event
  of exchange rate fluctuations. A cross currency interest rate swap has been contracted to hedge this
  amount, the fair value of which, at 31 December 2016, amounted to a debit balance of €65,283
  thousand (€10,288 thousand at 2015 year-end).
- Exchange rate hedges for future transactions. The entity has taken out forward exchange contracts to cover exchange rate fluctuations. The fair value of the forward securities contracted at 31 December 2016 amounted to a debit balance of €23,364 thousand.

Amounts recognised in equity during the year and amounts written off from equity and included as income during the year are recorded in the statement of total changes in equity of Banco Sabadell.

No market failure has been recognised in the 2016 results related to cash flow micro-hedges being non-material.

c) Hedge of net investment in foreign operations

The entity uses hedging policies with the primary aim of minimising the negative impact of adverse movements in currency markets on capital ratios and on income generated through its currency business. Hedging operations cover the foreign exchange risk of investments made in companies of the Group located in countries in which the operating currency is not the euro (see Note 4.4.3.1 on Structural exchange rate risk).

At present, GBP 1,368 million, USD 100 million and MXN 1,293 million are being hedged by currency forwards. The fair value of these hedging derivatives at 31 December 2016 amounted to a debit balance of €29,192 thousand.

During 2016, the coverage of capital has increased from GBP 768 million in 2015 to the current GBP 1,368 million, representing 73% of the total investment.

This currency hedge is continuously monitored in light of market fluctuations.

# Note 14 – Non-current assets and assets and liabilities included in disposal groups classified as held for sale

The composition of these headings in the consolidated balance sheets at 31 December 2016 and 2015 is as follows:

Thousand euro

	2016	2015
Assets	5,423,159	3,165,293
Loans and advances	28,584	-
Credit institutions	28,284	-
Customers	301	-
Debt securities	2,375,232	-
Equity instruments	7,012	19,452
Tangible assets	2,942,683	3,145,841
Tangible assets for own use	66,958	97,351
Foreclosed tangible assets	2,874,314	3,047,535
Leased out under operating leases	1,411	955
Rest of other assets	69,648	-
Impairment adjustments	(844,464)	(622,907)
Non-current assets and disposal groups classified as held for sale	4,578,694	2,542,386
Liabilities		
Financial liabilities measured at amortised cost	2,058	-
Tax liabilities	52,106	-
Liabilities under insurance or reinsurance contracts	2,159,084	-
Rest	119	-
Liabilities included in disposal groups classified as held for sale	2,213,368	-

The main change year-on-year corresponds to the reclassification of assets and liabilities from Mediterráneo Vida, Sociedad Anónima de Seguros y Reaseguros to this heading, as explained in Note 2 to these consolidated annual accounts.

The contribution of Mediterráneo Vida to the heading "Accumulated other comprehensive income" of the consolidated equity statement, has been reclassified under the sub-heading "Items that may be reclassified to profit or loss - Non-current assets and disposal groups classified as held for sale". This contribution includes two items, valuation adjustments of available-for-sale financial assets and the effect of accounting mismatches arising from different valuations of financial assets and associated insurance commitments.

Foreclosed tangible assets comprise assets received from borrowers or other debtors of the bank for the full or partial settlement of financial assets representing collection rights against those borrowers or debtors.

Total tangible assets for own use relates to residential property (offices).

As regards assets arising from foreclosures, 90.37% of the balance corresponds to residential assets, 7.74% to industrial assets and 1.89% to rural properties.

The average term during which assets remained within the category of "*Non-current assets and disposal groups classified as held for sale - Foreclosed assets*" was 31.6 months in 2016. Policies for the sale of these assets and their disposal though alternative means are described in Note 4.

The percentage of foreclosed assets sold to purchasers financed by the bank in 2016 was 30.49% (34.73% in 2015).

Movements in non-current assets and disposal groups classified as held for sale during 2016 and 2015 were as follows:

Thousand euro

## Note 15 – Investments in joint ventures and associates

Movements in this item at 31 December 2016 and 2015 were as follows:

Balance at 31 December 2014	513,227
Scope additions/exclusions	-
Profit/(loss) for the year	48,795
Capital increase or acquisition	116,469
Sale or dissolution	(273,253)
Dividends	(35,070)
Transfer	-
Impairment, valuation adjustments, translation differences and other	(29,172)
Balance at 31 December 2015	340,996
Scope additions/exclusions	(249)
Profit/(loss) for the year	74,573
Capital increase or acquisition (*)	8,953
Sale or dissolution	(21,365)
Dividends	(17,159)
Transfer	-
Impairment, valuation adjustments, translation differences and other	(5,077)
Balance at 31 December 2016	380,672

In the cash flow statement – cash flows from investment activities, the item on payments relating to investments in joint ventures and associates gives the sum of  $\in 21,365$  thousand in sales and  $\in 17,159$  thousand in dividends in the preceding table, plus the result of gains from investees no longer consolidated in Note 39 which amounted to 46,883 thousand.

The main investees included for the first time in the balance sheet and those no longer in the balance sheet in 2016 and 2015 are indicated in Schedule I, the most significant of which are described hereafter.

As disclosed in Note 2 to these consolidated annual accounts, in April 2016, Banco Sabadell transferred 100% of its stake in Dexia, for a total price of €52,390 thousand.

In April 2015 Banco Sabadell took part in the capital increase carried out by Metrovacesa, contributing  $\in$ 112 million and carrying an impairment of  $\in$ 59.2 million (see Note 37). In September 2015, 100% of the interests held in this company were sold (the derecognised net carrying value amounted to  $\in$ 270,027 thousand).

2015 includes €30.2 million from the recovery of the impairment of the stake in Ribera Salud, S.A.

Goodwill associated with investments in joint ventures and associates at 31 December 2016 amounted to  $\notin$  305 thousand ( $\notin$ 14,473 thousand in 2015).

At 31 December 2016 and 2015 no support agreements or other type of significant contractual commitment had been provided by the bank or its subsidiaries to associates.

The reconciliation between the Group's investment in investees and the balance recorded under the heading *"Investments in joint ventures and associates"* is as follows:

	2016	2015
Group investment in investees (Schedule I)	230,781	370,706
Contributions due to accumulated profits	162,200	199,821
Valuation adjustments (impairment and exchange differences)	(12,309)	(229,531)
Total	380,672	340,996

At 31 December 2016 and 2015, the aggregate book value of investments in associates considered as nonmaterial on an individual basis was of €164,144 thousand and €144,986 thousand, respectively. The main financial data of the investment considered to be individually significant, Bansabadell Vida, at 31 December 2016 and 2015 are as follows:

Thousand euro

	BanSaba	adell Vida (*)
	2016	2015
Total assets	9,396,948	6,500,714
Of which: financial investments	9,163,245	6,314,678
Total liabilities	8,920,224	6,122,844
Of which: technical provisions	8,501,287	5,765,573
Result of the technical life account	105,434	96,528
Of which: premiums allocated to the year	4,366,127	2,829,184
Of which: claims ratio for the year	(4,297,929)	(2,768,577)
Of which: technical financial yield	133,934	108,566

(\*) Figures taken from BanSabadell Vida accounts without taking into consideration consolidation adjustments nor the Group's percentage holding.

# Note 16 – Tangible assets

The composition of this heading in the consolidated balance sheets at 31 December 2016 and 2015 was as follows:

Thousand euro		2016				201	5	
	Cost	Depreciation	Impairment	Net value	Cost	Depreciation	Impairment	Net value

Net balances at 31 December 2015		981,586	727,937	2,341,905	137,098	4,188,526

Details of the source of the amortised cost of the transfers to the "*Tangible assets*" heading during 2016 are as follows:

En miles de euros			
	Note	2016	2015
Inventories	18	13,932	65,835
Non-current assets and disposal groups classified as held for sale	14	45,484	72,871
Credit losses		(8,103)	(12,944)
Total		51,313	125,762

The gross value of own-use tangible assets that were fully depreciated and remained in use at 31 December 2016 and 2015 amounted to €477,722 thousand and €379,757 thousand, respectively.

The net book value of tangible assets corresponding to foreign operations amounted to  $\notin$  251,723 thousand at 31 December 2016 ( $\notin$  279,021 thousand at 31 December 2015).

The Group concluded property sales in which operating leases (maintenance, insurance and taxes borne by the bank) relating to those properties were simultaneously arranged with the purchasers. The main characteristics of the most significant lease contracts in effect at the end of 2016 are as follows:

	2016				
Operating lease contracts	No.properties sold	No. contracts with purchase option	No. contracts without purchase option	Mandatory term	
2010	379	379	-	10 years	
2012	4	4	-	15 years	
2012 (inclusion Banco CAM)	20	20	-	10 to 12 years	

For the batch of 379 properties sold in April 2010 for which an operating lease was arranged at the time of the sale, the income for the mandatory term of the lease, initially set at €37.5 thousand per month, is updated annually based on the Spanish CPI and with a minimum increase of 2.75% per year until April 2018. Rentals on other properties are updated annually in line with the CPI.

In relation to this group of operating leases:

- Lease expenses for all lease contracts in effect during 2016 and 2015 amounted to  $\notin$ 49,183 thousand and  $\notin$ 49,131 thousand respectively, recognised under other general administrative expenses for property, plant and equipment under the heading "*Administrative expenses*" (see Note 36).

- As regards this set of operating lease contracts, the present values of minimum future rental payments to be incurred by the bank during the mandatory term of the leases (assuming that none of the available options to renew the lease or purchase the asset are likely to be exercised) at 31 December 2016 stood at  $\in$ 50,889 thousand for leases with terms of one year ( $\in$ 50,983 thousand in 2015),  $\in$ 155,778 thousand for one to five years ( $\in$ 168,370 thousand in 2015) and  $\in$ 232,017 for more than five years ( $\notin$ 253,034 thousand in 2015).

With regard to the tangible assets leased out under operating leases heading, the bulk of the operating lease arrangements is carried out by BanSabadell Renting, S.A. and consists in vehicle leasing.

As regards the investment properties item, neither the rental income from these investment properties nor the associated direct costs, whether or not the investment properties were producing rental income during the year, were significant in relation to the consolidated annual accounts.

# Note 17 – Intangible assets

The breakdown of this item at 31 December 2016 and 2015 was as follows:

	2016	2015
Goodwill:	1,094,526	1,092,777
Banco Urquijo	473,837	473,837
Grupo Banco Guipuzcoano	285,345	285,345
Sabadell United Bank, N.A.	72,960	70,645
From acquisition of Banco BMN Penedés assets	245,364	245,364
Rest	17,020	17,586
Other intangible assets:	1,040,689	987,793
With a finite useful life:	1,040,689	987,793
Contractual relations with customers and brand (Banco Urquijo)	5,734	7,106
Contractual relations with customers (Banco Guipuzcoano)	21,753	26,960
Private Banking Business, Miami	29,725	25,783
Contractual relations with customers (Sabadell United Bank)	12,488	15,795
Contractual relations with TSB customers and brand	292,043	388,978
Computer applications	675,397	508,397
Other deferred expenses	3,549	14,774
Total	2,135,215	2,080,570

### Goodwill

As set forth in the applicable regulatory framework, Banco Sabadell has performed an assessment to determine whether there is a potential for impairment to goodwill.

The valuation method used in the assessment has consisted in discounting the future attributable net profit associated with activities performed by the bank over a 5-year forecasting period (to 2021). It is expected that by 2021 the bank will have generated recurring profits and therefore, taking that year as a reference, the terminal value is estimated using a growth rate in perpetuity of 2%.

A discount rate of 9.5% was used, a figure reached through the CAPM (Capital Asset Pricing Model) methodology. This rate is comprised of a risk-free rate of return on Spanish bonds, plus one market risk premium.

The key variables on which the financial projections are based are: growth in brokerage margin (determined by expected trading volumes and interest rates) and changes of other items on the income statement and capital ratios.

Recoverable values, both overall and at the level of the CGUs, are higher than their respective book values and therefore no impairment has been recognised.

In addition, a sensitivity analysis has been conducted in which some key valuation variables were subjected to stress; again, there was no indication of any impairment. The variables on which this analysis was based include:

- A 15% haircut in recurring fees and commissions for 2021.
- A 50% increase in recurrent cost of risk for 2021.
- An increase in expenses for 2021 arising from the application of a multiplier of five times the expected inflation on 2020 expenses.
- An additional 1% increase in the premium when calculating the discount rate.
- A +0.5% increase in minimum capital requirements for each year.
- No growth rate has been applied.

#### Macroeconomic assumptions used in the assessment of goodwill impairment are as follows:

The Spanish economy will maintain relatively favourable growth trends in 2017 and will continue to stand out in a positive light from other Eurozone countries. The economy has room to continue growing above its potential and domestic demand will continue driving economic growth. GDP will be somewhat less dynamic than in the last two years due to: (i) the smaller positive impact of factors that have been boosting activity (oil, fiscal policies, low interest rates) and (ii) the consequences of uncertainty surrounding the process of the UK's withdrawal from the EU. In terms of the labour market, unemployment rates will continue to decline.

The adjustment of imbalances dating back to before the crisis (finalisation of the adjustments to the real estate sector, external surplus, significant reduction in private sector debts) has laid the foundations from which to move towards a more sustainable economic growth over time. The real estate sector will continue to improve as a result of the improved performance of the labour market and low mortgage interest rates. External surplus will prevail in a situation in which the internationalisation process of Spanish companies will continue. The deleveraging of the private sector will take place following the improved performance of nominal GDP, which will allow lending to stabilise.

The main domestic risk will continue to be the country's politics. The political situation will make it harder to adopt new structural reforms and comply with the fiscal goals set by the European Commission.

Inflation will increase positively, following its negative track record in recent years. This will be possible as the underlying effect linked to oil prices will dissipate and further steps will be taken to continue reducing surplus capacity.

### Evaluation of whether there is any evidence of impairment to significant goodwill:

#### Banco Urquijo

Banco Urquijo's goodwill is allocated to the cash-generating units (CGUs) thought likely to benefit from the identified synergies. CGUs and their relative weight with respect to total goodwill are as follows: Private Banking CGU (12.7%), Commercial Banking CGU (21.2%), Corporate Banking CGU (1.9%) and Remainder CGU (2.3%). Synergies that could not be allocated to any one CGU because of limitations in the historical data available for the acquired entity were assigned to all CGUs (61.9%).

#### Banco Guipuzcoano

Banco Guipuzcoano's goodwill was assigned to the Commercial Banking CGU and reflects the future profitgenerating potential of the acquired assets and liabilities, the value of the potential cost and income synergies identified and the costs associated with the transaction.

#### Sabadell United Bank

The valuation method used for the goodwill of Sabadell United Bank consisted in discounting the present value of future distributable net profits associated with the business carried out by the bank over a projection period of 4 years (up to 2020) and the calculation of their a terminal value based on a zero growth rate in perpetuity. The discount rate used was 12.7%.

#### **BMN-Penedès**

The goodwill resulting from the business combination consisting of the acquisition of assets from BMN-Penedès was assigned to the Commercial Banking CGU.

Under the revised Spanish Corporate Income Tax Act, this goodwill is not tax deductible.

### Other intangible assets

#### Banco Urquijo

Under other intangible assets, the main intangible assets associated with the purchase of Banco Urquijo were mainly the values of contractual rights under agreements with customers taken over from Banco Urquijo in relation to certain products (SICAVs, investment and pension funds, credit/debit cards, short-term loans and credit, brokerage and securities custody), the values of deposits, and the value of the Banco Urquijo brand.

These intangible assets have finite useful lives of 12 years for Private Banking customers, seven years for Commercial Banking customers and five years for other categories. They are being amortised of these lives on a straight-line basis in a similar way to that used for tangible assets.

#### Banco Guipuzcoano

The intangible assets associated with the acquisition of Banco Guipuzcoano are largely made up of the value of contractual rights arising from relations with customers from Banco Guipuzcoano for core deposits and mutual funds. Core deposits were valued according to the income approach, using the cost saving method. The fair value was mainly determined by estimating the net present value of the cash flows generated by the lower cost of core deposits compared with alternative funding sources. The mutual fund management was valued by the income approach using the excess earnings method. The fair value was determined, in most cases, by estimating the net present value of the cash flows generated by fees and commissions from the sale of mutual funds. These assets are amortised over a period of 10 years from the date of acquisition of Banco Guipuzcoano.

### Private Banking business Miami

Intangible assets associated with the 2008 acquisition of the Miami Private Banking business include the value of contractual rights arising from customer relationships transferred along with the business and consisting mainly of short-term loans and deposits. These assets are being amortised over a period of 15 years as from their creation.

### Sabadell United Bank

Sabadell United Bank encompasses a number of acquisitions made in the United States (Mellon United Bank, Lydian and JGB) in which intangible assets amounting to USD 40,496 thousand were recognised relating mainly to core deposits and contractual relations with certain customers. These are intangible assets with finite lives since it can be assumed that customer accounts will be closed over time due to changes in address, decease or changes in bank preferences.

The assets are being amortised over a period of 7 to 11 years from initial recognition and were valued at USD 13,164 thousand and USD 17,196 thousand at 31 December 2016 and 31 December 2015, respectively.

### TSB

Note 2 to these consolidated annual accounts contains details of the intangible assets associated with the acquisition of TSB.

To measure the evidence of impairment of other intangible assets, the value in use is calculated using the income approach (discounted cash flow), with the multi-period excess earnings technique being used for income from contractual customer relations and deposits, and the price premium technique to measure the brand value. These intangible assets have not suffered any decline in value.

Software purchase costs comprise mainly the capitalised costs of developing the Group's computer software and the purchase of software licences.

Movements in goodwill in 2016 and 2015 were as follows:

	Goodwill	Impairment	Total
Balance at 31 December 2014	1,084,146	-	1,084,146

(\*) see Note 2.

The gross value of other intangible assets that were still in use and had been fully amortised at 31 December 2016 and 2015 totalled €420,775 thousand and €408,239 thousand, respectively.

### Note 18 – Other assets

The composition of the heading "Other assets" at 31 December 2016 and 2015 was as follows:

	2016	2015
Insurance contracts linked to pensions	153.989	153.631
Inventories	2.924.459	3.655.548
Rest of other assets	1.358.817	943.855
Total	4,437,265	4.753.034

The "*Rest of other assets*" heading includes mainly unearned expenses paid, the accrual of customers' fees and commissions and transactions in progress pending settlement.

Movements in inventories in 2016 and 2015 were as follows:

	Notes	E Land	Buildings under construction	Finished buildings	Total
Balance at 31 December 2014		2,207,879	405,304	1,408,174	4,021,357
Additions		389,468	138,919	516,064	1,044,451
Disposals		(338,388)	(130,612)	(415,802)	(884,802)
Impairment through profit or loss	38	(131,883)	(73,428)	(254,312)	(459,623)

Other transfers	16	(42,268)	(26,650)	3,083	(65,835)
Other		-	-	-	-
Balance at 31 December 2015		2,084,808	313,533	1,257,207	3,655,548
Additions		182,646	56,381	385,950	624,977
Disposals		(277,711)	(110,769)	(415,782)	(804,262)
Impairment through profit or loss	38	(183,017)	(26,660)	(328,195)	(537,872)
Reversal of impairment through profit or loss		-	-	-	-
Other transfers	16	(29,868)	2,437	13,499	(13,932)
Other		-	-	-	-
Balance at 31 December 2016		1,776,858	234,922	912,679	2,924,459

At 31 December 2016 and 2015, there are no inventories associated with mortgage loans.

# Note 19 – Deposits in credit institutions and central banks

The breakdown of deposits in credit institutions and central banks in the consolidated balance sheets at 31 December 2016 and 2015 is as follows:

	2016	2015
By heading:		
Financial liabilities measured at amortised cost	28,494,516	26,290,788
Total	28,494,516	26,290,788
By nature:		
Demand deposits	330,937	323,546
Deposits with agreed maturity	18,119,583	18,059,035
Sale of assets	9,858,488	7,181,238
Deposits redeemable at notice	-	551,116
Hybrid financial liabilities	-	10
Other accounts	170,165	180,233
Valuation adjustments	15,344	(4,390)
Total	28,494,516	26,290,788
By currency:		
In euro	22,678,036	22,622,578
In foreign currency	5,816,480	3,668,210
Total	28,494,516	26,290,788

Average annual rates of interest payable on deposits from credit institutions for 2016 and 2015 were 0.43% and 0.80% respectively (0.44% in 2016 excluding TSB).

## Note 20 – Customer deposits

The deposits from customers reported on the consolidated balance sheets at 31 December 2016 and 2015 can be analysed as follows:

	2016	2015
By heading:		
Financial liabilities measured at amortised cost	134,414,536	132,891,337
	104,414,000	102,001,001
Total	134,414,536	132,891,337
By nature:		
Demand deposits	92,010,553	84,536,132
Current accounts	58,651,052	49,828,204
Savings accounts	32,292,578	33,622,239
Rest	1,066,923	1,085,689
Deposits with agreed maturity	35,290,208	43,144,910
Fixed term	32,057,280	39,576,739
Non-marketable covered bonds and bonds issued	2,691,720	3,427,124
Rest	541,208	141,047
Deposits redeemable at notice	30,384	-
Hybrid financial liabilities	4,833,384	3,246,439
Sale of assets	2,072,155	1,950,585
Valuation adjustments	177,851	13,271
Total	134,414,536	132,891,337
By sector:		
General governments	3,700,137	5,547,511
Other sectors	130,536,548	127,330,555
Other valuation adjustments (interest, fees and commissions, other)	177,851	13,271
Total	134,414,536	132,891,337
By currency:		
In euro	88,892,661	89,369,130
In foreign currency	45,521,875	43,522,207
Total	134,414,536	132,891,337

Average annual rates of interest payable on customer deposits for 2016 and 2015 were 0.39% and 0.67% respectively (0.30% in 2016 excluding TSB).

## Note 21 – Debt securities issued

Details of debt securities issued by the Group by type of issuance and recognised on the consolidated balance sheets at 31 December 2016 and 2015 are as follows:

	2016	2015
Straight bonds	4,743,071	5,729,404
Straight bonds	3,226,857	4,378,806
Structured bonds	457,164	291,548
Government guaranteed ordinary bonds	1,059,050	1,059,050
Promissory notes	3,938,500	3,937,214
Covered bonds	10,856,100	9,999,800
Territorial bonds	-	-
Securitisation funds	5,345,117	6,601,999
Subordinated marketable debt securities	1,481,042	1,441,587
Subordinated liabilities	1,462,642	1,423,187
Preference shares	18,400	18,400
Valuation and other adjustments	169,708	154,367
Total	26,533,538	27,864,371

Schedule V shows details of the outstanding issues at 2016 and 2015 year-end.

On 22 December 2014, under the powers granted by the Board of Directors at its meeting held on 18 December 2014, the Executive Committee of Banco de Sabadell, S.A. and the competent governing bodies of Sabadell International Equity Ltd., Guipuzcoano Capital S.A.U. and CAM Capital S.A.U. respectively agreed, following authorisation by Bank of Spain, to redeem the outstanding nominal balance of the following issues of preference shares and subordinated bonds:

Name	Issuing entity	Redemption date	Outstanding nominal balance
Series I/2009 Preference Shares	Banco de Sabadell, S.A.	24/02/2015	10.84
Special Subordinated Debt Issue	Banco de Sabadell, S.A. (originally issued by CAM)	24/02/2015	6.13
Subordinated Bonds November 1988 Issue	Banco de Sabadell, S.A. (originally issued by Caja de Ahorros de	24/02/2015	0.1
First Issue Subordinated Bonds September 1988	Banco de Sabadell, S.A. (originally issued by CAM)	24/02/2015	0.62
Series A Preference Shares	Sabadell International Equity LTD.	24/02/2015	18.79
Series I Preference Shares	Guipuzcoano Capital, S.A.U.	24/02/2015	1.16
Series III Preference Shares	Guipuzcoano Capital, S.A.U.	19/02/2015	17.73
Series A Preference Shares	CAM Capital, S.A.U.	24/02/2015	6.07
Series B Preference Shares	CAM Capital, S.A.U.	24/02/2015	3.45
Series C Preference Shares	CAM Capital, S.A.U.	24/02/2015	20.4

The Issues were redeemed through the payment in cash on the redemption date of 100% of the nominal value plus any accrued unpaid remuneration, in accordance with the issuer's redemption powers as provided in the terms and conditions of the relevant prospectuses approved and entered in the official registry of the Spanish National Securities Market Commission. The entire redemption was carried out in February 2015.

At a meeting held on 30 September 2013, the Board of Directors of Banco de Sabadell, S.A. agreed to the involvement of Banco Sabadell in the management of the subordinated debt and preference shares of Banco Gallego, S.A. within the resolution plan for NCG Banco Gallego. The management of Banco Gallego's hybrid instruments consisted of a forced reduction in their valuation. This reduction took the form of:

- for the subordinated debt, an obligatory amendment to certain characteristics of those instruments and their reconfiguration as senior fixed-income securities of Banco Gallego;
- for the preference shares, the mandatory repurchase in cash by Banco Gallego, with the repurchase
  price including the aforementioned reduction in the valuation of the instrument and with the holder of
  the securities being obliged to reinvest the repurchase price in the subscription of senior fixed-income
  securities of Banco Gallego.

By means of its involvement in the management of hybrid instruments, Banco Sabadell offered investors the possible alternative of subscribing new Banco Sabadell mandatory convertible subordinated bonds in Series III/2013 ("III/2013 Bonds") or Series IV/2013 ("IV/2013 Bonds"), depending on the type of Banco Gallego securities in their possession.

Once the period was concluded during which hybrid instrument holders could choose to subscribe the III/2013 Bonds and IV/2013 Bonds issued by Banco Sabadell, applications were received for 50,954,400 III/2013 Bonds and 70,720,450 IV/2013 Bonds. The nominal values at which they were issued and the nominal outstanding balance of mandatory convertible subordinated bonds are as follows:

Mandatory convertible bonds	Opening nominal balance Out	tstanding nomir	<u>nal balance</u>
		2016	2015
Bonds III/2013	50,954	-	42,238
Bonds IV/2013	70,720	17,680	35,360

III/2013 Bonds matured on 28 October 2016. The IV/2013 Bonds mature on 28 October 2017, and 25% of the initial nominal value must be converted annually. The annual nominal interest rate corresponding to the III/2013 and IV/2013 bonds is 5%.

On 27 October 2015, at the end of the second voluntary conversion period for holders of mandatory convertible subordinated bonds issue III/2013, at a meeting of the Executive Committee on 5 November 2015, the Committee agreed to partially implement, for a nominal amount of  $\in$ 131,339.875, the resolution to increase capital adopted by the Board of Directors at its meeting held on 30 September 2013 in order to satisfy the voluntary conversion of 2,018,480 bonds under said issue. The increase in capital was filed with the Barcelona Mercantile Registry on 19 November 2015, and resulted in the issue and allotment of a total of 1,050,719 new ordinary shares with a nominal value of  $\notin$ 0.125 each; the new shares were admitted to trading on the Barcelona, Bilbao, Madrid and Valencia Stock Exchanges via the electronic trading system (*Mercado Continuo*) on 26 November 2015.

On 28 October 2015 the second mandatory partial conversion of the Banco Sabadell mandatory convertible subordinated bonds issue IV/2013 took place, and accordingly 25% of the initial nominal amount of the 70,720,450 IV/2013 Bonds was converted through a reduction of 25% in their initial nominal value, which is equivalent to a total of 9,261,430 shares of Banco Sabadell for a nominal amount of  $\in 1,157,678.75$ . To complete the mandatory partial conversion of the IV/2013 Bonds, on 5 November 2015, the capital increase resolution adopted by the Board of Directors on 30 September 2013 was partially implemented by the Executive Committee, for a nominal amount of  $\in 1,157,678.75$ . The capital increase was filed with the Barcelona Mercantile Registry on 19 November 2015, and resulted in the issue and allotment of a total of 9,261,430 new ordinary shares with a nominal value of  $\in 0.125$  each; the new shares were admitted to trading on the Barcelona, Bilbao, Madrid and Valencia Stock Exchanges via the electronic trading system (*Mercado Continuo*) on 26 November 2015.

On 28 October 2016, the final maturity was reached of the Series III/2013 Mandatory Convertible Subordinated Bond issue, resulting in the mandatory conversion of the 42,237,846 III/2013 Bonds which remained in circulation into ordinary shares of Banco Sabadell. As a result, on 7 November 2016, the public deed for the capital increase of a nominal amount of  $\epsilon$ 4,396,034.125 was registered with the Barcelona Mercantile Registry, agreed by the Executive Committee of Banco Sabadell on 3 November 2016, to attend to the mandatory total conversion arising from the maturity of the issue of Mandatory Convertible Subordinated Bonds Series III/2013, which gave rise to the conversion of the 42,237,846 bonds still in circulation and to the issue and allotment of a total of 35,168,313 new ordinary shares of Banco Sabadell. On 15 November 2016, the Spanish National Securities Market Commission (CNMV) verified that the requirements were satisfied for the admission to trading of the aforementioned new shares, with a nominal value of  $\epsilon$ 0.125 each, issued by Banco Sabadell. Lastly, on 16 November 2016, the Governing Bodies of the Stock Exchanges in Barcelona, Bilbao, Madrid and Valencia agreed to the admission to trading of the aforementioned new shares, with a nominal value of  $\epsilon$ 0.125 each, therefore the effective purchase of these new shares in the Stock Exchanges of Barcelona, Bilbao, Madrid and Valencia agreed to the admission to trading of the aforementioned new shares of Barcelona, Bilbao, Madrid and Valencia system (*Mercado Continuo*) was initiated on 17 November 2016.

On 28 October 2016 the third mandatory partial conversion of the Banco Sabadell mandatory convertible subordinated bonds issue IV/2013 took place, and accordingly 25% of the initial nominal amount of the 70,720,450 IV/2013 Bonds were converted through a reduction of 25% in their initial nominal value. On 7 November 2016, the public deed for the capital increase of a nominal amount of €1,840,141.25 was registered with the Barcelona Mercantile Registry, agreed by the Executive Committee of Banco Sabadell on 3 November 2016, to attend to the third mandatory partial conversion arising from Mandatory Convertible Subordinated Bonds Series IV/2013, and accordingly 25% of the initial nominal amount of the 70,720,450 bonds were converted through a reduction of 25% of their initial nominal amount of the 70,720,450 bonds were converted through a reduction of 25% of their initial nominal value, giving rise, in consecutive order, to the issue and allotment of a total of 14,721,130 new ordinary shares of Banco Sabadell. On 15 November 2016, the Spanish National Securities Market Commission (CNMV) verified that the requirements were satisfied for the admission to trading of the aforementioned new shares, with a nominal value of €0.125 each, issued by Banco Sabadell. Lastly, on 16 November 2016, the Governing Bodies of the Stock Exchanges

in Barcelona, Bilbao, Madrid and Valencia agreed to the admission to trading of the aforementioned new shares, therefore the effective purchase of these new shares in the Stock Exchanges of Barcelona, Bilbao, Madrid and Valencia via the electronic trading system (*Mercado Continuo*) would be initiated on 17 November 2016.

The capital increases implemented as a result of the voluntary and mandatory partial conversions in 2016 and 2015 are as follows:

Issue	Conversion/ maturity date	Reason for conversion	Bonds converted (*)		Capital increase at nominal value (thousand euro)	Date of admission to quotation
OSNC III/2013	28/10/2016	mandatory total conversion	42,237,846	35,168,313	4,396	16/11/2016
OSNC IV/2013	28/10/2016	mandatory partial conversion	-	14,721,130	1,840	16/11/2016
Total 2016 (*	*)				6,236	
OSNC III/2013	28/10/2015	voluntary conversion	2,018,480	1,050,719	131	26/11/2015
OSNC IV/2013	28/10/2015	mandatory partial conversion	-	9,261,430	1,158	26/11/2015
Total 2015 (**)					1,289	

(\*) In the OSNC (mandatory convertibles) IV/2013 issue, each year 25% of the nominal value of the 70,720,450 bonds was converted through a reduction of 25% of the initial nominal value.

(\*\*) See Statement of changes in equity for 2016 and 2015.

Expenses due to the payment of mandatory convertible subordinated bonds amounted to €2,345 thousand and €30,989 thousand at 31 December 2016 and 2015.

### Note 22 – Other financial liabilities

The balance of other financial liabilities on the consolidated balance sheets at 31 December 2016 and 2015 is analysed below.

Thousand euro

	2016	2015
By heading:		
Financial liabilities measured at amortised cost	2,568,434	2,422,181
Total	2,568,434	2,422,181
By nature:		
Debentures payable	331,680	409,601
Guarantee deposits received	56,423	60,895
Clearing houses	626,516	313,492
Collection accounts	889,252	883,596
Other financial liabilities (*)	664,564	754,597
Total	2,568,434	2,422,181
By currency:		
In euro	2,391,198	2,298,309
In foreign currency	177,236	123,872
Total	2,568,434	2,422,181

Set out below is the information concerning the average payment period for suppliers required under Additional Provision Three of Law 15/2010, taking into account the amendments introduced by Law 31/2014 of 3 December which amended the Spanish Capital Companies Act in order to improve corporate governance:

Number of days and thousand euro

	2016	2015
Days		
Average payment period for suppliers	31.51	27.75
Ratio of paid operations	31.52	27.74
Ratio of operations pending payment	18.69	39.34
Amount		
Total payments made	937,522	1,018,008
Total payments pending	323	1,076

#### Note 23 – Liabilities under insurance and reinsurance contracts

In December 2015, liabilities under insurance and reinsurance contracts mainly included balances corresponding to Mediterráneo Vida, S.A.U. de Seguros y Reaseguros. In 2016, these have been reclassified under the heading "*Liabilities included in disposal groups classified as held for sale*" (see Note 14).

The main products offered by the Group insurance companies are life insurance (risk of death), as well as life insurance (savings) and casualty insurance.

Within life insurance (risk), it is necessary to differentiate between unrestricted policies and policies offered to customers with a mortgage or consumer loan, in order to fully or partially cover the amount of the loan in the event that a contingency covered by the policy arises.

The purpose of recurring life savings products is to guarantee a sum at the date indicated by customers in the policy, with an additional benefit in the event of death or disability in certain products over the period during which premiums are paid.

In unit-linked savings products, the amount receivable by the customer at the date set in the policy consists of the fund accumulating at that date, without this sum being guaranteed.

Casualty insurance products are aimed at retail customers in which the principal risk is death or absolute permanent disability due to an accident.

The balance at 31 December 2016 and 2015 of liabilities under insurance and reinsurance contracts is as follows:

	2016	2015
Unearned premiums and unexpired risks	1,396	1,785
Non-life insurance		
Benefits	55	147
Life insurance:		
Mathematical reserves	1,874,810	1,873,147
Benefits	20,584	23,034
With profits insurance and returned premiums	4,738	5,536
Life insurance in which the investment risk is borne by the policyholders	44,311	81,704
Implicit adjustments due to accounting mismatches	248,026	232,942
Total	2,193,920	2,218,295
Of which recognised as Non-current liabilities included in disposal groups classified as held for sale	2,159,084	-

Income and expenses of assets and liabilities under insurance and reinsurance contracts have been recorded under the headings "*Income from assets under insurance and reinsurance contracts*" and "*Expenses on liabilities under insurance or reinsurance contracts*", respectively, on the consolidated income statement.

Income from insurance and reinsurance contracts issued include the amount of premiums accrued corresponding to the insurers Mediterráneo Vida, S.A.U. de Seguros y Reaseguros (in which the Group holds an indirect interest through Mediterráneo Sabadell, S.L.) and Assegurances Segur Vida, S.A. (in which the Group holds an indirect interest through BancSabadell d'Andorra, S.A.).

Expenses under insurance and reinsurance contracts issued include the amount of accrued premiums relating to the insurance companies of the Group.

The net balance of income and expenses from insurance and reinsurance issued is negative because it does not include net financial income associated with the insurance business which is recorded under "*Interest income*" in the income statement for the year, amounting to &83,810 thousand in 2016 (&88,424 thousand in 2015).

The gains and losses generated by the Group's insurance companies by type of product sold are as follows:

Thousand	euro

	2016	2015
Life insurance	18,712	23,082
Life Risk	255	1,387
Life Saving	18,434	21,777
Unit linked	23	(82)
Casualty Insurance	406	529
Non-technical account	1,479	2,129
Total	20,597	25,740

Given the volume that the insurance companies represent within the parameters of the Group and the high concentration of business involving life savings products, sensitivity towards insurance risk and the concentrations of insurer risk are not significant for the Group. In this respect, for the death and disability business an increase of 25% in claims would have an impact on results of €2 million.

Concerning objectives, policies and processes for managing risk associated with the insurance business:

- On a monthly basis, the Group analyses the proper matching of flows of assets and liabilities from individual and group life products, as well as compliance with the requirements as to the limits set by current legislation and internal management policies relating to the quality, type and volume of financial investments.
- Most Group insurance companies' investments relate to debt securities with a weighted average
  rating of BBB+, the level of which is expected to be maintained in the future in accordance with the
  maximum credit quality policy established internally. Regarding liquidity, 91.40% of total investments
  is positioned in liquid assets, this amount being considered sufficient to cover payment obligations in
  the short term.
- In relation to market risk, the Group's insurance companies monitor on a monthly basis the market price performance of their financial assets and any latent capital gains/losses in the investments managed.
- The Group uses reinsurers to transfer risks that exceed the limits set forth in the Group's internal policies.

## Note 24 – Provisions

Movements in the "Provisions" heading during 2016 and 2015 are shown below:

Thousand euro

	Pensions and other post-employment defined benefit obligations	Other long term employee benefits	Pending legal issues and tax litigation	Commitments and guarantees given	Other provisions	Total

Balance at 31 December 2016	89,471	24,554	49,404	84,032	58,753	306,214

(\*) see Note 2.

The heading "*Pension funds and other post-employment defined benefit obligations*" includes the amount of provisions for the coverage of post-employment remuneration, including commitments undertaken with early retirees and similar commitments.

The heading "*Provisions for commitments and guarantees given*" includes the amount of provisions for the coverage of guarantees given as a result of financial guarantees or other types of contract.

During the usual course of business, the Group is exposed to fiscal, legal and regulatory contingencies, among others. All significant contingencies are analysed on a regular basis, with the collaboration of third party experts when necessary, in order to determine the probability of the Group being faced with a disbursement situation. For those cases in which this disbursement is considered likely, a provision is created corresponding to the amount of the best estimate of the current value of said disbursement, recorded under the heading *"Pending legal issues and tax litigation"* or under the heading *"Other provisions"*. At 31 December 2016 and 2015, this heading mainly includes:

- Provisions for tax contingencies of €49 million at 31 December 2016 (€52 million at 31 December 2015) which mainly include tax office inspection records of the tax authority signed on a contested basis (see Note 43) and appealed tax settlements.
- At 31 December 2016, operating losses from the sale of products to TSB customers of €12 million (€19 million at 31 December 2015). TSB is protected from the incurred losses due to historic operations through a hedge provided by Lloyds Bank Plc, and an account receivable of the equivalent amount is therefore recognised under the heading "*Other assets*".
- Liabilities due to legal contingencies valued at €32 million (€13 million at 2015 year-end).

The final disbursement amount, as well as the payment schedule, is uncertain as a result of inherent difficulties when estimating the factors used to determine the provision amount.

As regards potential impacts for Banco Sabadell of the repayment of amounts received due to the application of the 'floor clauses', whether as a result of the hypothetical nullity of floor clauses imposed by courts of law, or as a result of enforcing Royal Decree-Law 1/2017 of 20 January on urgent measures to protect consumers regarding floor clauses, the following considerations should be taken into account:

Banco Sabadell believes that its floor clauses are transparent and clear-cut. The aforementioned floor clauses have not been definitively and generically declared null and void by any final ruling, as the entity has legal and procedural arguments that should be reviewed and taken into consideration before filing such an action before the Court of Appeal in Madrid (*Audiencia Provincial de Madrid*) to appeal the ruling of the mercantile court no. 11 of Madrid (*juzgado mercantil n°11 de Madrid*) on the nullity of interest rate floor clauses.

Our assessment is that the probability of the risk of Banco Sabadell floor clauses being definitively and generically declared null and void by higher instance courts materialising is remote, both for substantial and temporary reasons, for which reason no provisions have been established pursuant to IAS 37.

The above notwithstanding, the publication of Royal Decree-Law 1/2017, of 20 January, on urgent measures to protect consumers regarding floor clauses sets forth a series of measures which Banco Sabadell will apply within the time frames set out in this Royal Decree-Law, and although they have no direct economic impact nor do they presuppose or prejudge the validity of floor clauses in Banco Sabadell's mortgage contracts, for each case that is presented, an assessment will be made of each individual clause to determine whether they meet the transparency requirements set out by the Supreme Court.

The maximum estimated impact in the event that all floor clauses were to be declared null and void, and considering full retroactive effects, would be  $\in$ 490 million, an amount which would be reduced in line with the specific terms of the ruling, its method of enforcement and the number of claims addressed through extrajudicial proceedings.

#### Pensions and similar commitments

The items giving rise to defined benefit pension liabilities recognised in the Group balance sheet are as follows:

	2016	2015	2014	2013	2012
Obligations arising from pension commitments	862,218	858,877	1,044,326	1,036,360	950,952
Assets recognised on balance sheet		-	-	696	-
Fair value of scheme assets	(749,295)	(744,256)	(922,165)	(889,575)	(752,281)
Net liability recognised on balance sheet	112,923	114,621	122,161	147,481	198,671

The yield on the Banco Sabadell pension scheme was negative at -0.91% and the yield on the E.P.S.V. was 0.15% for 2016.

The yield on the Banco Sabadell pension scheme was 0.33% and the yield on the E.P.S.V. was negative, at - 0.16% for 2015.

Movements in 2016 and 2015 in obligations due to pension commitments and the fair value of the scheme assets are as follows:

Thousand euro

	Obligations arising from pension commitments	Fair value of scheme assets

Insurance policies with related parties	Matched	50,320	1.75%			
Insurance policies with unrelated parties	Matched	404,508	1.75%			
Insurance policies		377,657				
Insurance policies with related parties	Matched	97,935	1.75%			
Insurance policies with unrelated parties	Matched	279,722	1.75%			
Internal funds	Without cover	26,392	1.75%			
Total commitments		858,877				

The amount of the obligations covered by matched insurance policies at 31 December 2016 stands at  $\in$ 839,083 thousand ( $\in$ 832,485 thousand at 31 December 2015) and therefore in 97.32% of its commitments (96.93% at 31 December 2015) there is no survival risk (mortality tables) or profitability (interest rate) for the Group. Therefore, the interest rate fluctuations throughout the year have not had an impact on the entity's financial situation.

Obligations covered by specific assets totalled €839,083 thousand (of which €711 thousand covered commitments for early retirements) at 31 December 2016 and €832,485 thousand (of which €2,158 thousand covered commitments for early retirements) at 31 December 2015.

The sensitivity analysis for each main actuarial assumption at 31 December 2016 and 31 December 2015 shows how the commitment and cost of the services in the current year would have been affected by reasonably possible changes at that date.

## Capital

#### Share capital at year-end

The bank's share capital at 31 December 2016 amounted to  $\notin$ 702,108,899.50, divided into 5,616,151,196 registered shares with a par value of  $\notin$ 0.125 each ( $\notin$ 679,905,624 divided into 5,439,244,992 registered shares with the same par value at 31 December 2015). All shares have been fully disbursed and are numbered in sequential order from 1 through 5,616,151,196, both included.

The bank's shares are quoted on the Madrid, Barcelona, Bilbao and Valencia stock exchanges via the electronic stock market (*mercado continuo*) managed by the Sociedad de Bolsas, S.A.

None of the other companies included in the consolidated group is quoted on a stock exchange.

The rights attaching to equity instruments are those regulated by the Spanish Capital Companies Act. At the General Meeting of Shareholders, shareholders may cast votes in a number that reflects their proportional holding in share capital.

### Changes in share capital during 2016

Thousand euro

	Number of shares	Capital
Balances at 31 December 2015	5,439,244,992	679,906
Capital Increase due to Scrip Dividend - April 2016	127,016,761	15,877
Conversion of mandatory convertible bonds III/2013 - November 2016 (*)	35,168,313	4,396
Conversion of mandatory convertible bonds IV/2013 - November 2016 (*)	14,721,130	1,840
Balances at 31 December 2016	5,616,151,196	702,019
(*) and Note 21		

(\*) see Note 21

At its meeting on 31 March 2016, the Board of Directors of Banco Sabadell resolved to implement the resolution to increase capital charged to reserves as approved by the Ordinary General Meeting of Shareholders on 31 March 2016 under the first proposal of item three of the agenda, in order to pay flexible remuneration to shareholders (scrip dividend) for an amount of approximately €0.05 per share, the nominal value of the capital increase being €19,997,224.125, by issuing and allotting 159,977,793 new shares with a nominal value of €0.125 each.

On 19 April 2016, the negotiation period for rights to free assignment corresponding to the capital increase having expired, the Executive Committee of Banco Sabadell, at its meeting on 25 April 2016, exercised the powers conferred to it by the Board of Directors on 31 March 2016, under the delegation of powers conferred to the Board by the General Ordinary Meeting of Shareholders, carried out a capital increase of  $\leq$ 15,877,095.125, by means of the issue and allotment of 127,016,761 new ordinary shares at a nominal value of  $\leq$ 0.125 each, with no share premium, rendering the unsubscribed and unpaid portion of the capital increase null and void, which amounted to  $\leq$ 4,120,129.

The public instrument corresponding to the capital increase was registered with the Barcelona Mercantile Registry on 27 April 2016, and the 127,016,761 ordinary shares with a nominal value of  $\notin 0.125$  that had been issued and allotted were admitted to trading on the Barcelona, Bilbao, Madrid and Valencia stock exchanges through Spain's electronic trading system (*Mercado Continuo*) on 4 May 2016.

#### Significant investments in the bank's capital

As required by Article 23 of Royal Decree 1362/2007 of 19 October, implementing the Securities Market Law (Law 24/1988 of 28 July), the following table gives details of significant investments in Banco Sabadell (i.e. investments amounting to 3% or more of the share capital or voting rights) at 31 December 2016.

Company	Direct holding	Number of shares	Indirect holding
Various subsidiaries of BlackRock Inc.	3.00%	208,735	BlackRock Inc.
Fintech Investment Ltd.	3.42%	192,209	Winthrop Securities Ltd.

The sources for the information provided are communications sent by shareholders to the Spanish Securities Exchange Commission (CNMV) or directly to the institution.

#### Share premium

The balance in the share premium account at 31 December 2016 amounted to €7,882,899 thousand (€7,935,665 thousand at 31 December 2015).

Movements in 2016 and 2015 were as follows:

Balance at 31 December 2014	5,710,626
Capital increase	1,470,867
Conversion of subordinated bonds (equity)	738,621
Conversion of subordinated bonds (financial liabilities)	18,409
Dividend payment	(50,678)
Reclassification of capital increase expenses to reserves	47,691
Rest	129
Balance at 31 December 2015	7,935,665
Capital increase	-
Conversion of subordinated bonds (equity)	-
Conversion of subordinated bonds (financial liabilities)	53,681
Dividend payment	(106,448)
Reclassification of capital increase expenses to reserves	-
Rest	-
Balance at 31 December 2016	7,882,898

#### Other reserves

The balance of this heading breaks down as follows on the consolidated balance sheets at 31 December 2016 and 2015:

Thousand euro	0016	2015
	2016	2015
Restricted reserves:	377,792	328,049
Legal reserve	135,981	100,612
Reserves for treasury shares pledged as security	194,477	216,281
Capitalisation reserve Law 27/2014	35,985	-
Canary Island investment reserve	8,234	8,041
Reserve for capital redenomination in euro	113	113
Capital redemption reserve	3,002	3,002
Unrestricted reserves	3,317,763	2,694,720
Reserves for investments in joint ventures and associates	109,510	152,296
Total	3,805,065	3,175,065

The contributions of consolidated companies to Group reserves are shown in Schedule I.

#### Equity instruments issued other than capital

At 31 December 2016 and 2015, the bank had no equity instruments issued other than capital.

#### Other equity items

Other equity items include the amounts of instruments associated with remuneration paid through incentives plans in 2016 and 2014 (see Note 36 "*Staff expenses*") which, at 31 December 2016 and 2015 amounted to  $\notin$  38,416 thousand and  $\notin$ 14,322 thousand (see Note 36 under "*Staff expenses*").

#### Transactions in own equity instruments

Movements in the parent company's shares acquired by the bank were as follows:

	No. of shares	Nominal value (in thousand euro)	Average price (in euro)	% Holding
Balance at 31 December 2014	40,830,340	5,103.79	2.14	1.01
Purchases	253,341,455	31,667.68	2.01	4.66
Sales	179,327,159 (*)	22,415.89	2.10	3.30
Balance at 31 December 2015	114,844,636	14,355.58	1.99	2.11
Purchases	238,760,796	29,845.10	1.34	4.25
Sales	301,703,766 (**)	37,712.97	1.52	5.37
Balance at 31 December 2016	51,901,666	6,487.71	1.72	0.92

(\*) Includes the delivery of 21,486,946 shares as supplementary shareholder remuneration.

(\*\*) Includes the delivery of 63,803,147 shares as supplementary shareholder remuneration (see Note 3).

Net gains and losses arising on transactions in own equity instruments have been included under the heading "*Own funds - Other reserves*" on the consolidated balance sheet, and they are shown in the statement of changes in equity, in the row corresponding to sales or cancellations of treasury shares.

At 31 December 2016, TSB owned 7,686,005 Banco Sabadell shares (4,497,443 at 2015 year-end), at a cost of  $\leq 12,004$  thousand ( $\leq 9,764$  thousand at 2015 year-end), which are recognised as treasury shares in the consolidated balance sheet.

At 31 December 2016, a total of 146,996,917 shares of the bank with a nominal value of  $\in$ 18,375 thousand were pledged as security (132,281,811 shares with a nominal value of  $\in$ 16,535 thousand at 31 December 2015).

The number of Banco de Sabadell, S.A. own equity instruments held by third parties but under management by Group companies at 31 December 2016 and 2015 was 16,886,009 and 20,294,304, respectively, with a nominal value of  $\notin$ 2,111 thousand and  $\notin$ 2,537 thousand. In both years, all securities correspond to Banco Sabadell shares.

## Note 26 – Accumulated other comprehensive income

The composition of this Group item at 31 December 2016 and 2015 was as follows:

Thousand euro

	2016	2015
Items that will not be reclassified to profit or loss	13,261	12,212
Actuarial gains or (-) losses on defined benefit pension schemes	13,261	12,212
Non-current assets and disposal groups classified as held for sale	-	-
Share of the income and expenses of investments in joint ventures and associates	-	-
Other valuation adjustments	-	-
Items that may be reclassified to profit or loss	93,881	443,394
Hedge of net investments in foreign operations (effective portion)	151,365	17,927
Foreign currency translation	(428,650)	(23,690)
Hedging derivatives. Cash flow hedges (effective portion)	(21,521)	16,412
Available-for-sale financial assets	280,548	416,235
Debt instruments	229,008	495,688
Equity instruments	51,540	83,607
Other value adjustments	-	(163,060)
Non-current assets and disposal groups classified as held for sale	96,299	-
Share of the income and expenses of investments in joint ventures and associates	15,840	16,510
Total	107,142	455,606

The heading "*Items which may be reclassified to profit or loss - Other value adjustments*" included, at 31 December 2015, mainly adjustments made by the Group's insurance companies for the purpose of correcting accounting mismatches arising from the different valuation of financial assets and associated insurance commitments. At 31 December 2016, all items included under "*Accumulated other comprehensive income of Mediterráneo Vida, S.A.*" have been reclassified under the heading "*Non-current assets and disposal groups classified as held for sale*" (see Notes 2 and 14).

The breakdown of taxes on gains relating to each item on the statement of recognised income and expenses at 31 December 2016 and 2015 was as follows:

_		2016			2015

Total		49,668	5,421		37,110	3,804

Movements in this heading in 2016 and 2015 were as follows:

Balances at 31 December 2014	54,793
Valuation adjustments	(1,556)
Rest	(16,127)
Scope additions/exclusions	(20,777)
Percentage holding and other	846
Profit/(loss) for the year	3,804
Balances at 31 December 2015	37,110
Valuation adjustments	211
Rest	12,347
Scope additions/exclusions	7,650
Percentage holding and other	(724)
Profit/(loss) for the year	5,421
Balances at 31 December 2016	49,668

Dividends paid to the minority shareholders of the Group companies in 2016 totalled €1,288 thousand (BancSabadell d'Andorra, S.A.) and €1,226 thousand in 2015.

In 2016, the company Xeresa Golf, SA is assigned to the Real Estate Asset Transformation business, and Aurica III, Fondo de Capital Riesgo and Business Services for Operational Support, S.A.U to banking business in Spain.

BancSabadell d'Andorra, S.A. is assigned to a non-reported business segment, due to its materiality.

## Note 28 – Guarantees given

The breakdown of this Group heading is as follows:

	2016	2015
Financial guarantees	1,872,647	1,874,676
Assets under third party obligations	-	-
Non-revocable documentary credit	1,119,550	1,112,265
Additional settlement guarantee	20,000	19,000
Other bonds and guarantees given	5,517,157	5,350,226
Other contingent liabilities	-	-
Total	8,529,354	8,356,167

#### Non-performing guarantees given

Movements in the balance of non-performing guarantees given were as follows:

Balances at 31 December 2014	195,073
Additions	15,206
Disposals	(120,452)
Balances at 31 December 2015	89,827
Additions	77,472
Disposals	(63,160)
Balances at 31 December 2016	104,139

The breakdown of the balance of non-performing guarantees given by geography at 31 December 2016 and 2015 is as follows:

Thousand euro

	2016	2015
Specific coverage determined individually:	12,236	15,542
Hedging of customer insolvency risk	12,236	15,542
Specific coverage determined collectively:	13,125	30,978
Hedging of customer insolvency risk	10,865	29,646
Allowances for country risk	2,260	1,332
IBNR coverage (*)	35,510	67,159
Total	60,871	113,679

(\*) Collective value adjustments for losses incurred but not reported (see Note 1.3.4).

Movements of this hedge, together with the heading "*Contingent commitments given*", included under the liabilities heading "*Provisions*", are detailed in Note 24.

# Note 29 – Contingent commitments given

The breakdown of this item at 31 December 2016 and 2015 was as follows:

Thousand euro	2016	2015
Drawable by third parties	19,567,289	19,306,331
By credit institutions	660	652
By general governments	518,018	615,956
By other resident sectors	11,522,581	10,567,226
By non-residents	7,526,029	8,122,497
Financial asset forward purchase commitments	2,675,004	426,102
Conventional financial asset purchase contracts	2,779,198	652,802
Subscribed securities pending disbursement	1,939	-
Securities placement and subscription commitments	-	-
Other contingent commitments given	185,257	745,379
Total	25,208,687	21,130,614

Note: Hedge of contingent commitments of €3,161thousand, the movements of which are given in Note 24, together with movements of guarantees given.

Total commitments drawable by third parties at 31 December 2016 included credit commitments secured with a mortgage in the amount of  $\notin$ 2,180,435 thousand ( $\notin$ 1,845,200 thousand at 31 December 2015). Regarding other commitments, in the majority of cases there are other guarantees in place in line with the Group's risk management policy.

The balance of forward purchase commitments of financial assets includes the amount of forward purchases of debt securities which will be classified in the available-for-sale financial assets portfolio.

## Note 30 – Off-balance sheet customer funds

Off-balance sheet customer funds under the Group's management and funds sold but not managed by the Group were as follows:

	2016	2015
Under Group management:	20,223,209	19,460,848
Investment funds and companies	16,571,928	15,458,944
Asset management	3,651,281	4,001,904
Investment funds sold but not managed	6,022,265	5,968,308
Pension funds (*)	4,116,997	4,305,121
Insurance (*)	10,243,421	7,646,801
Financial instruments deposited by third parties	66,438,327	58,394,937
Total	107,044,219	95,776,015

(\*) The balance in pension funds and insurance relates to those sold by the Group.

## Note 31 – Interest income and expenses

These headings on the consolidated income statement include interests accrued during the year on all financial assets and liabilities whose yield, implicit or explicit, is obtained by applying the effective interest rate approach, irrespective of whether they are valued at fair value or otherwise, and using product adjustments due to accounting hedges. Interests are recorded at gross value, without deducting any tax withholdings exercised at the source.

The majority of interest income is generated by the Group's financial assets measured either at amortised cost or at fair value through equity.

The quarterly net interest income since 2015 and the average income and costs of the various components that make up the total investment and funds is broken down as follows:

						2	2016						
	18	t quarter		2n	d quarter		3	Brd quarter			4th quarter		TOTAL

In 2016, the net interest margin over average total assets has continued to improve, due to various factors, the most noteworthy of which are the increase in customer spreads (due to reduced financing costs of customer deposits), the reduction in capital market costs, the reduction of problematic assets and the improvement in profitability as a result of the acquisition of TSB.

In annual average terms, the net interest margin as a percentage of average total assets stood at 1.86% (1.71% excluding TSB), increasing by 14 basis points compared with the previous year (1.72% in 2015). In terms of the quarterly changes in this item, the net interest margin as a proportion of average total assets in the fourth quarter of 2016 stood at 1.82% (1.69% excluding TSB). In the fourth quarter 2015 it stood at 1.83%.

The following table shows, for investment positions and deposits in the business in Spain - branch network operations, excluding subsidiaries' operations, the contractual spread on transactions arranged in each quarter in 2016 and 2015 (new business additions) and the resulting final portfolio (stock) at the end of each period:

# Note 32 – Fee and commission income and expenses

Fee and commission income and expenses on financial operations and the provision of services are as follows:

	2016	2015
Fees derived from risk operations	316,676	273,725
Asset operations	215,700	169,708
Guarantees	100,976	104,017
Service fees	520,028	455,530
Cards	191,219	172,324
Payment orders	50,408	48,287
Securities	50,392	52,846
Sight accounts	89,854	91,698
Rest	138,155	90,375
Asset management fees	311,878	274,089
Investment funds	145,714	146,887
Sale of pension funds and insurance products	140,863	94,631
Asset management	25,301	32,571
Total	1,148,582	1,003,344
Memorandum item		
Fee-related income	1,376,364	1,166,677
Fee-related expenses	(227,782)	(163,333)
Net fees and commissions	1,148,582	1,003,344

## Note 33 – Net trading income

Net trading income consists in a group of headings from the consolidated income statement for the years ended 31 December 2016 and 2015, which are shown below:

	2016	2015
By heading:		
Gains or (-) losses on derecognition of financial assets and liabilities not measured at fair value through		
profit or loss, net	476,217	1,052,288
Gains or (-) losses on financial assets and liabilities held for trading, net	107,593	150,440
Gains or (-) losses on financial assets and liabilities designated at fair value through profit or loss, net	114	109
Gains or (-) losses from hedge accounting, net	25,798	5,324
Total	609,722	1,208,161
By type of financial instrument:		
Net gain/(loss) on debt securities	385,194	1,051,570
Net gain/(loss) other equity instruments	100,933	29,983
Net gain/(loss) on derivatives	130,987	149,562
Net gain/(loss) on other items (*)	(7,392)	(22,954)
Total	609,722	1,208,161

(\*) Mainly includes income from the sale of various credit portfolios sold during the year.

In 2016 and 2015 the Group sold certain debt securities from its portfolio of available-for-sale financial assets, generating profits of  $\in$  382,538 thousand at 31 December 2016 ( $\in$ 1,045,492 thousand at 31 December 2015). This included profits of  $\in$  362,211 thousand ( $\in$ 1,020,466 thousand in 2015) on sales of debt securities held with general governments.

As explained in Note 9 to these consolidated annual accounts, in June 2016 the offer to purchase 100% of Visa Europe shares materialised, generating capital gains of €109 million.

## Note 34 – Other operating income

Thousand euro

The composition of this item of the consolidated income statement for the years ended 31 December 2016 and 2015 is as follows:

	2016	2015
Income from operation of investment properties	108,195	95,856
Sales and other income from the provision of non-financial services	92,537	61,507
Other operating income	85,993	59,355
Total	286,725	216,718

Sales and income from the provision of non-financial services include income generated by the management of real estate asset portfolios from other entities (Sareb, the Spanish company for the management of assets proceeding from the restructuring of the banking system).

Income recorded under other products is mainly derived from income of Group entities involved in non-financial activities (mainly operating leases).

## Note 35 – Other operating expenses

The composition of this item of the consolidated income statement for the years ended 31 December 2016 and 2015 is as follows:

	2016	2015
Contribution to deposit guarantee funds	(94,880)	(85,997)
Other items	(371,994)	(212,114)
Of which: Contribution to resolution fund	(47,661)	(43,510)
Total	(466,873)	(298,111)

Expenses recognised under the heading "*Contribution to deposit guarantee funds*" correspond to the contributions made by Banco Sabadell ( $\in$ 84,119 thousand and  $\in$ 82,968 thousand in 2016 and 2015, respectively). They also include expenses recorded by TSB ( $\in$ 7,614 thousand in 2016, corresponding to the contribution to the UK Financial Services Compensation Scheme) and by Sabadell United Bank, N.A. (contribution to the Deposit Guarantee Fund established by the US Federal Deposits Insurance Corporation), of  $\notin$ 2,929 thousand in 2016 and  $\notin$ 3,029 thousand in 2015.

The heading "*Other items*" included, at 31 December 2016, estimated financial contributions for the conversion of deferred tax assets into credit receivable by the Spanish Tax Authority amounting to  $\notin$ 57 million, as well as expenses corresponding to tax on deposits in credit institutions amounting to  $\notin$ 27,590 thousand in 2016 ( $\notin$ 27,450 thousand in 2015). The other items included in this heading largely correspond to expenses associated with non-financial activities.

#### Note 36 – Administrative expenses

This heading on the consolidated profit and loss statement includes expenses incurred by the Group in respect of staff and other general administrative expenses.

#### Staff expenses

The staff expenses charged to the consolidated income statement for the periods ended 31 December 2016 and 2015 are as follows:

	2016	2015
Payrolls and bonuses for active staff	(1,217,862)	(1,075,803)
Social Security payments	(241,201)	(220,457)
Contributions to defined benefit pension schemes	(2,322)	(4,963)
Contributions to defined contribution pension schemes	(68,534)	(49,772)
Other staff expenses	(133,135)	(106,346)
Total	(1,663,053)	(1,457,341)

At 31 December 2016 and 2015, the distribution of the average workforce for all companies within the Group by category and gender is as follows:

	2016		2015			
	Men	Women	Total	Men	Women	Total
Management staff	490	146	636	439	106	545
Technical staff	9,403	9,670	19,073	8,425	8,338	16,763
Administrative staff	1,643	4,670	6,313	1,335	3,236	4,571
Total	11,536	14,486	26,022	10,199	11,680	21,879

The breakdown of the bank's average workforce with a disability of at least 33% by category at 31 December 2016 and 2015 is as follows:

Average number of employees with a disability		
	2016	2015
Management staff	4	4
Technical staff	149	127
Administrative staff	108	74
Total	261	205

At 31 December 2016 and 2015, the distribution of employees by category and gender is as follows:

	2016		2015			
	Men	Women	Total	Men	Women	Total
Management staff	491	154	645	490	137	627
Technical staff	9,339	9,756	19,095	9,375	9,560	18,935
Administrative staff	1,610	4,595	6,205	1,714	4,814	6,528
Total	11,440	14,505	25,945	11,579	14,511	26,090

Of the total workforce at 31 December 2016, 263 were recognised as having some form of disability (254 at 31 December 2015).

The increase in the average workforce is due to the inclusion of TSB's workforce during the second half of 2015.

Non-recurring staff expenses amounted to €67,988 thousand at 31 December 2016. Expenses which do not form part of the entity's ordinary activities are considered non-recurring. Expenses tied to the new structure and commercial transformation are considered staff expenses.

#### Deferred payment system for variable remuneration accrued in previous years

At the General Meeting of Shareholders held on 26 March 2013, shareholders approved a payment system for the payment of variable remuneration accrued during 2012 to the Executive Directors and a group of management staff, through the delivery of Banco de Sabadell, S.A. stock options ("SREO 2012"). Executive Directors could choose to receive up to 100% of their variable remuneration in options, and other directors up to 50%. This plan was concluded in March 2016, and its settlement gave rise to the delivery in cash of  $\notin$ 2,414 thousand.

- At the General Meeting of Shareholders held on 27 March 2014, shareholders approved a payment system for the approved amounts of variable remuneration accrued during 2013 to be paid to the bank's Executive Directors through the delivery of the equivalent value of that remuneration in Banco de Sabadell, S.A. stock options (hereinafter, "the System").

Each option grants the holder the right to receive, in cash, after a three-year period, the difference between the Final Value of the Banco de Sabadell, S.A. shares at the end of said period and the Exercise Price of the option under the System. The exercise date is 29 March 2017.

The option's exercise price is  $\in$ 2.015, with the settlement amount being the difference, if positive, between the quoted share price at the end of the scheme and the exercise price.

The hedging mechanism for the System was determined through the conclusion of the relevant counterparty agreement, based on general market rules. The premium paid when arranging the hedge was  $\in 2.4$  million and did not entail any cost increase for the bank with respect to the option to receive the variable remuneration in effect up to the date of implementation of the System. This premium was recorded as a trading derivative. The options that were sold were recorded under the heading "*Financial liabilities held for trading – Derivatives*" on the liability side of the balance sheet and at 31 December 2016 the recorded amount amounted to  $\notin 4$  thousand ( $\notin 425$  thousand at 2015 year-end).

#### Long-term supplementary incentive system based on shares

- At the General Meeting of Shareholders held on 27 March 2014, shareholders approved a long-term supplementary incentive based on the increase in value of Banco de Sabadell, S.A. shares for executive directors, five senior management members and 419 management staff (hereinafter, "the Incentive").

The Incentive consists of the assignment of a certain number of rights to the beneficiaries, which include the right to receive the increase in value of the same number of Banco de Sabadell, S.A. shares over a three-year period, taking as a reference their listed share price, to be paid in the form of bank shares. The termination date is 31 March 2017. The exercise price is €1.75 and the maximum number of rights to shares covered by the Incentive is currently 38,932,447 (39,242,000 at the time of their issue).

The fair value of services received has been calculated based on the fair value of pledged capital instruments, i.e. bank stock options, as indicated in Note 6, employing the Monte Carlo simulations valuation technique and the Black-Scholes valuation model.

A necessary condition for the rights coming into effect will be that the beneficiary exceed the minimum compliance level for the personal target called "Professional Efficiency Appraisal" set by the bank's Remuneration Committee.

Balance at 31 December 2014	37,529,000
Granted (*)	3,123,730
Cancelled	(580,536)
Balance at 31 December 2015	40,072,194
Granted	
Cancelled	(1,139,747)
Balance at 31 December 2016	38,932,447

(\*) Resulting from capital increase.

Pight

- At the General Meeting of Shareholders held on 31 March 2016, shareholders approved a long-term supplementary incentive based on the increase in value of Banco de Sabadell, S.A. shares for three executive directors, seven senior management members and 472 Group management staff (hereinafter, ICLP Plan 2016).

The ICLP Plan 2016 consists of the assignment of a certain number of rights to the beneficiaries which include the right to receive the increase in value of the same number of Banco de Sabadell, S.A. shares over a three-year period, taking as a reference their listed share price, to be paid in the form of bank shares. The termination date is 30 April 2019. The exercise price is €1.494 and the maximum number of rights to shares covered by the Incentive will be 30,000,000.

The fair value of services received has been calculated based on the fair value of pledged capital instruments, i.e. bank stock options, as indicated in Note 6, employing the Monte Carlo simulations valuation technique and the Black-Scholes valuation model.

A necessary condition for the rights coming into effect will be that the beneficiary exceed the minimum compliance level for the personal target called "Professional Efficiency Appraisal" set by the bank's Remuneration Committee.

Balance at 30 April 2016	30,000,000
Granted	
Cancelled	(1,505,000)
Balance at 31 December 2016	28,495,000

- TSB Banking Group employees have a supplementary incentive linked to a target fulfilment plan between 2016 and 2020, and this remuneration is paid in Banco Sabadell, S.A. shares and in cash.

In terms of staff expenses associated with share-based incentive schemes (see Note 1.3.15), their expenses in 2016 and 2015 totalled €18,271 thousand and €9,129 thousand, respectively; the counterparty is reflected in equity (see statement of changes in equity in the row corresponding to payments based on shares).

Durby

#### Other administrative expenses

This includes all other administrative expenses incurred during the year:

Thousand eur	о
--------------	---

	2016	2015
Property, plant and equipment	(249,682)	(211,020)
Information technology	(246,396)	(102,157)
Communication	(47,156)	(63,674)
Publicity and propaganda	(111,148)	(87,497)
Subcontracted administrative services	(99,097)	(72,308)
Contributions and taxes	(95,748)	(101,134)
Technical reports	(40,341)	(86,170)
Security services and fund transfers	(21,042)	(19,267)
Business entertainment expenses and staff travel expenses	(20,357)	(19,148)
Membership fees	(16,788)	(20,159)
Other expenses	(52,539)	(46,640)
Total	(1,000,294)	(829,174)

#### Fees from Auditing Institutions

The fees received by PricewaterhouseCoopers Auditores, S.L. in 2016 for account auditing services and other audit-related services provided in Spain amounted to  $\leq 1,666$  thousand and  $\leq 485$  thousand, respectively ( $\leq 1,456$  thousand and  $\leq 341$  thousand in 2015). Auditing services provided by other companies in the PwC network in relation to branches and subsidiaries abroad totalled  $\leq 2,782$  thousand in 2016 ( $\leq 2,296$  thousand in 2015).

Fees received by other auditors in 2016 for account auditing and other audit-related services provided in Spain amounted to €112 thousand and €0 thousand, respectively (€121 thousand and €0 thousand in 2015). Fees for the audit of branches and subsidiaries abroad amounted to €0 thousand and €25 thousand in 2016, respectively (€24 thousand and €0 thousand in 2015).

Fees received by other companies in the PwC network for tax advisory services and other services provided in 2016 amounted to  $\leq$ 183 thousand and  $\leq$ 1,179 thousand. Fees for these services in 2015 amounted to  $\leq$ 116 thousand and  $\in$ 1,232 thousand, respectively.

#### Other information

Number of branches

At 31 December 2016, non-recurring administrative expenses amounted to €19,073 thousand, including expenses associated with specific cost-reduction programmes and expenses relating to special projects associated with changes in the scope of consolidation.

The cost-to-income ratio at 2016 year-end (staff and general expenses / gross income) stood at 48.68% (48.96% in 2015), and at 42.66% excluding TSB (44.59% in 2015), improving in respect of the cost-to-income ratio in 2015. For the purpose of calculating this ratio for 2015, recurring net trading income of  $\notin$ 400 million per year has been considered.

Information about the Group's branches is given below:

	2016	2015
Branches	2,767	2,873
Spain	2,119	2,204
Outside Spain	648	669

# Note 37 – Impairment or (-) reversal of impairment on financial assets not measured at fair value through profit or loss

The composition of this item of the consolidated income statement for the years ended 31 December 2016 and 2015 is as follows:

	Note	2016	2015
Available- for-sale financial assets		(112,284)	(132,390)
Debt securities	8	521	1,719
Other equity instruments	9	(112,806)	(134,109)
Loans and receivables (*)	11	(441,414)	(1,396,177)
Total		(553,698)	(1,528,567)

(\*) This figure equates to the sum of provisions/reversals through profit or loss of value adjustments made for credit risk hedging, depreciation through profit or loss of financial assets no longer classified as assets and the recovery of write-offs.

## Note 38 – Impairment or (-) reversal of impairment on non-financial assets

The breakdown of this heading in the consolidated balance sheets for the years ended 31 December 2016 and 2015 was as follows:

usand euro				
	Note	2016	2015	
Property plant and equipment	16	(41)	(3,011)	
Investment property	16	(20,236)	(155,615)	
Goodwill and other intangible assets		-	(1)	
Inventories	18	(537,872)	(459,623)	
Total		(558,148)	(618,250)	

The total investment property impairment provision in 2016 and 2015 was calculated based on Level 2 valuations (see Note 6). The fair value of impaired assets amounts to  $\notin$ 2,404,246 thousand and  $\notin$ 2,341,905 thousand in 2016 and 2015, respectively.

Of the total inventory impairment provision for 2016 and 2015, €328,195 thousand and €168,492 thousand was calculated based on Level 2 valuations, respectively, and €209,677 thousand and €291,131 thousand based on Level 3 valuations, respectively. The fair value of impaired assets stood at €2,924,459 thousand and €3,655,548 thousand at the end of 2016 and 2015.

## Note 39 - Gains or (-) losses on derecognition of non-financial assets and interests, net

The composition of this heading of the consolidated income statement for the years ended 31 December 2016 and 2015 is as follows:

	2016	2015
Gains or (-) losses on derecognition of non-financial assets, net	35,108	(16,960)
Property, Plant and Equipment	(29,766)	(6,252)
Investment Properties	-	14,578
Intangible assets	-	-
Interests (*)	46,883	(31,087)
Other capital instruments	-	-
Other items	17,991	5,801

(\*) see Schedule I - Companies no longer consolidated.

In both years, the amount corresponding to property, plant and equipment included losses from the sale of branches which had already closed. 2015 also included gains on the sale of the building located in Príncipe de Vergara in Madrid for  $\notin$ 21.2 million.

## Note 40– Negative goodwill recognised in profit or loss

The negative consolidation difference in 2015 corresponds to the business combination with TSB, which is detailed in Note 2 to these consolidated annual accounts.

# Note 41 – Profit or (-) loss from non-current assets and disposal groups classified as held for sale not qualifying as discontinued operations

The breakdown of this heading for the years ended 31 December 2016 and 2015 was as follows:

	Note	2016	2015
Profit or (-) loss from non-current assets and disposal groups classified as held for sale not qualifying as discontinued			
operations, net		(314,519)	(180,868)
Property, plant and equipment for own use and foreclosed		(313,810)	(180,868)
Gains/losses on sales		(30,620)	(79,607)
Impairment/Reversal	14	(283,190)	(101,261)
Investment properties		(556)	-
Intangible assets		-	-
Interests		(41)	-
Other capital instruments		(99)	-
Other items		(14)	-

The impairment of non-current assets held for sale excludes income from the increase in fair value less sale costs.

The total provision for the impairment of non-current assets held for sale in 2016 and 2015 was calculated based on Level 2 valuations (see Note 6). The fair value of impaired assets amounts to  $\notin$ 2,103,086 thousand and  $\notin$ 2,521,979 thousand at the end of 2016 and 2015.

## Note 42 – Segment reporting

#### Segmentation criteria

The business units described below have been created based on the different business lines established in line with the Group's organisation and structure.

Segment information is first broken down by geography and then broken down based on the management characteristics of each of the customers to which each segment is aimed.

#### Segmentation by geography and business unit

As regards the bases of presentation and methodologies used, information for each business unit is based on the individual accounting records of each Group company, after all consolidation disposals and adjustments have been made, and on analytical accounting of income and expense where particular business lines are allocated to one or more legal entities, which allows income and expense to be allocated to each customer in line with the business to which they are assigned.

Each business unit is treated as an independent business, for which reason flows of income and expenses are generated between them when providing services for the distribution of products, services and systems. The final impact on the Group's income statement is zero.

Each business bears its own direct costs, on the basis of general and analytical accounting, as well as the indirect costs of corporate units.

Capital is allocated in such a way that each business is assigned capital equivalent to the minimum regulatory capital requirements to cover its risk exposure. This minimum regulatory requirement depends on the body responsible for supervising each business.

The capital assigned to each business in order to align them with the 12% capital requirement placed on the Group has been updated for 2016, and the capital assigned during 2015 has therefore been recalculated for the purpose of comparability.

Details of profit before tax and other key figures for each business unit for the years 2016 and 2015 are shown in the table below, along with a reconciliation of the totals shown in the table with those shown in the consolidated Group accounts:

	2016

(\*) Only includes TSB Banking Group PLC and 6 months of results. Exchange rate of GBP 0.7340 applied to the balance sheet and GBP 0.7201 applied to the income statement (average of last six months). For ROE, considering shareholders' equity.

(\*\*) Corresponds to unreported results from other geographies.

Average total assets for the entity as a whole at 31 December 2016 amounted to €206,265,187 thousand, compared with €186,538,365 thousand on the same date in the preceding year.

The types of products and services from which ordinary income is derived are described below for each business unit:

- Banking Business Spain includes the following business units for customers:

• Retail and Business Banking offers both investment and savings products. In terms of investment, the sale of mortgage products, current assets and loans is particularly noteworthy. In terms of savings, the main products are deposits (demand deposits and deposits with agreed maturity), investment funds, savings insurance and pension schemes.

Insurance protection products and payment services are also noteworthy, such as credit cards and transfers, amongst others.

- Corporate Banking has a comprehensive offering of specialised financing services and solutions, ranging from transaction banking to more sophisticated, tailor-made solutions in such areas as financing, treasury services and corporate finance.
- Markets and Private Banking offers and designs products and services with a high added-value with a view to achieving a high rate of return for the customer, increasing and diversifying the customer base and ensuring consistency of investment processes through a rigorous analysis and with high-quality management, while taking the customer relationship model to a multichannel level.

- Asset Transformation comprehensively manages abnormal risk and real estate exposure, and also sets out and implements the strategy of real estate investees, such as Solvia. In terms of abnormal risk and real estate exposure, the unit focuses on developing its asset transformation strategy and integrating the overall vision of the Group's real estate balance sheet in order to maximise its value.

- Banking Business United Kingdom: The TSB franchise includes retail business conducted in the United Kingdom, which includes current and savings accounts, personal loans, credit cards and mortgages. For 2015, it only includes TSB Banking Group PLC and 6 months of results.

- Banking Business Americas: Offers all types of banking and financial services, from the most complex and specialist services for large enterprises, such as project finance operations, to products for individual customers, offering all products and services that professionals and companies of all sizes might need.

Ordinary income generated by each business unit for 2016 and 2015 is shown below:

Total	3,523,565	3,897,957	5,170,100	4,842,356		

Section 2 of the Directors' Report gives a more detailed assessment of each of these business units.

## Note 43 – Tax situation (tax on gains from continued activities)

### Consolidated tax group

Banco de Sabadell, S.A. is the parent company of a tax consolidation group for corporate income tax purposes, comprising all the Spanish companies in which Banco de Sabadell, S.A. holds an interest that meets the requirements of the Spanish Corporate Income Tax Act (see Schedule I).

The remaining Spanish companies in the accounting group pay corporate income tax on an individual basis.

Companies in the accounting group that are not resident in Spain for tax purposes are taxed in accordance with the tax regulations applicable to them

#### **Reconciliations**

The reconciliation of the difference between consolidated accounting results and taxable Corporate Income Tax income is as follows:

	2016	2015
Profit/(loss) before taxes	1,019,422	744,761
Increases in tax base	1,949,598	2,161,120
From profits	1,949,598	2,161,120
From equity	-	-
Decreases in tax base	(958,341)	(951,151)
From profits	(954,991)	(866,445)
From equity	(3,350)	(84,706)
Taxable base	2,010,679	1,954,730
Tax payable (30%)	603,204	586,419
Deductions for double taxation, training and other	(2,152)	(1,452)
Tax payable	601,052	584,967
Due to temporary differences (net)	(306,173)	(499,886)
Adjustments for tax credits	-	-
Other adjustments (net) (*)	8,690	(52,565)
Tax expense or (-) income related to profit or loss from continuing operations	303,569	32,516

(\*) Includes €9 million from impact of Royal Decree 3/2016.

The "*Other adjustments*" heading includes €9 million (loss) from the impact of Royal Decree-Law 3/2016, whereby losses from sales of certain interests are not tax-deductible as from 1 January 2017 in Spain. In 2015, €45.3 million (GBP 32 million) were included, corresponding to the effect of changes in tax regulations in the United Kingdom affecting TSB Bank PLC. The legislative change introduced a surcharge of 8%, effective as of 1 January 2016, and applicable to the tax bases in excess of GBP 25 million per year, and also reduced the main tax rate from 20% to 19% as of 1 April 2017, and to 18% as of 1 April 2020.

The reconciliation between the Group corporate income tax expense calculated by applying the general tax rate and the expense recorded for corporate income tax on the consolidated income statement is as follows:

Thousand	euro

	2016	2015
Profit/(loss) before taxes	1,019,422	744,761
Domestic tax rate (30%)	305,827	223,428
Tax-exempt income (negative consolidation difference)	-	(79,807)
Difference in effective tax rate on companies outside Spain (*) (**)	14,024	(49,588)
Capitalisation reserve / Generated deductions / Non-deductible expenses	(7,222)	(8,786)
Income subject to lower tax rates (dividends and international source income)	-	(426)
Income from associates	(22,372)	(14,639)
Rest	13,312	(37,668)
Tax expense or (-) income related to profit or loss from continuing operations	303,569	32,516
Effective tax rate	30%	4%

(\*) Calculated applying the difference between the current tax rate for the Group in Spain (30%) and the effective tax rate applied to the Group's profit/(loss) in each jurisdiction. (\*\*) Includes €45.3 million due to change in UK tax regulations, as explained previously.

#### Taxable income – increases and deductions

The increases and deductions in taxable income are analysed in the following table on the basis of whether they arose from temporary or permanent differences:

	2016	2015
	2010	2010
Permanent difference	46,748	23,311
Temporary difference arising during the year	1,804,878	1,701,251
Temporary difference arising in previous years	97,972	436,558
Increases	1,949,598	2,161,120
Permanent difference	(76,069)	(479,627)
Temporary difference arising during the year	(4,437)	-
Temporary difference arising in previous years	(877,835)	(471,524)
Decreases	(958,341)	(951,151)

#### Deferred tax assets and liabilities

Under current tax and accounting regulations certain timing differences should be taken into account when quantifying the relevant tax expense related to profit from continuing operations.

In 2013, Royal Decree-Law 14/2013 gave rise to the condition of assets guaranteed by the Spanish State, tax assets generated by allowances for impairment of loans and other assets arising from the possible insolvency of debtors not related to the taxpayer and those pertaining to apportionments or contributions to social welfare systems and, where appropriate, early retirement (hereinafter, "monetisable tax assets").

Monetisable tax assets can be converted into a loan enforceable before the Spanish Tax Authority in cases where the taxpayer incurs accounting losses or the entity is liquidated or judicially declared insolvent. Similarly, they can be exchanged for Government Debt securities, once the 18-year term has elapsed, calculated from the last day of the tax period in which these assets were included in the accounting records. In order to maintain the guarantee offered by the Spanish State, these are subject to an annual contribution of 1.5% of their amount as from 2016 (see Note 35).

Royal Decree-Law 3/2016, of 2 December, introduced a series of amendments to Law 27/2014, of 29 November, on Corporate Income Tax, in force for the tax periods started on 1 January 2016. The most significant changes and their impact on Banco Sabadell Group at 31 December 2016 are described below:

• Limitation on the inclusion of monetisable tax assets in the tax base and on the offsetting of tax losses at 25% for 2015. No significant impacts for the Group are expected in terms of the expected period for offsetting tax loss carry-forwards and non-monetisable tax assets.

- A new limit for the application of deductions due to double taxation, calculated at 50 per cent of the full amount, for companies with a net turnover in excess of €20 million. This measure is applied for tax periods started in 2016. No impact on Banco Sabadell Group.
- Impairments in the value of stakes which were tax deductible in tax periods prior to 2013 will be included, at least, in equal amounts in the tax base for the first five subsequent tax periods. The expected impact will not affect the Group's financial position, and will only affect the cash flow over the next four years by approximately €160 million.
- As from 2017, losses on the transfer of stakes, provided that they meet the requirements in respect of the right to be exempt from paying tax on the profits obtained, shall not be tax deductible. The impact for the Group amounts to €9 million.

The sources of the deferred tax assets / liabilities recognised in the balance sheets at 31 December 2016 and 2015 are as follows:

Thousand euro		
Deferred tax assets	2016	2015
Monetisable	5,806,136	5,521,558
Due to credit impairment	3,916,675	3,555,130
Due to real estate asset impairment	1,762,269	1,836,497
Due to pension funds	127,192	129,931
Non-monetisable	611,883	618,348
Due to merger funds	128,716	141,965
Due to credit impairment outside of Spain	72,044	77,236
Due to other non-deductible provisions	10,664	13,139
Due to impairment of capital and debt instruments	15,130	136,787
Due to real estate asset impairment	179,918	-
Other	205,411	249,221
Tax credits for losses carried forward	350,261	430,598
Deductions not applied	7,057	6,008
Total	6,775,337	6,576,512
Deferred tax liabilities	2016	2015
	2010	2013
Property restatements	70,239	74,081
Adjustments to value of wholesale debt issuances arising on business combinations	78,628	104,177
Other financial asset value adjustments	322,230	244,048
Other	71,168	69,837
Total	542,265	492,143

The breakdown of deferred tax assets and liabilities by country is as follows:

	2016		2015	
	Deferred tax	Deferred tax	Deferred tax	Deferred tax
Country	assets	liabilities	assets	liabilities
Spain	6,586,676	530,948	6,314,494	487,073
UK	116,287	10,796	168,683	107
US	58,708	472	79,374	4,564
Mexico	13,417	0	13,371	244
Other	249	49	590	155
Total	6,775,337	542,265	6,576,512	492,143

As indicated in Note 1.3.21, according to the information available at the end of the year, and the projections taken from the Group's business plan for the coming years, the Group estimates that it will be able to generate a tax base which shall be sufficient to offset tax loss carry-forwards over the next four years and non-monetisable assets when these are deductible in line with current fiscal regulations.

Monetisable tax assets are guaranteed by the Spanish State, therefore their recoverability does not depend on the generation of future tax deductions.

----

#### Other information

Thousand euro Year in which qualifying Amount of income Year of reinvestment income was generated 2011 6.318 2011 2013 5,640 2012 2013 30,008 2013 43.759 2014 2014

Banco Sabadell Group obtained income qualifying for the reinvestment deduction regulated by Article 42 of the revised Corporate Income Tax Act, which was invested in the years indicated below:

Information on mergers carried out in previous years has been included in the consolidated annual accounts of the years in which each merger took place.

#### Capitalisation reserve and reserve for investments in the Canary Islands

As explained in Note 3 to these consolidated annual accounts, the Annual General Meeting held on 31 May 2016 approved a reserve for investments in the Canary Islands of €192 thousand. This reserve was fully materialised in 2015 by means of investments carried out in that same year in various items of property, plant and equipment classified as facilities. The reclassification of voluntary reserves as a restricted reserve over a period of five years to serve as a capitalisation reserve was approved (the reclassified amount covers the reduction of the tax base carried out in 2015 and that estimated for 2016).

#### Years open to inspection

In July 2016, the Spanish Tax Authority notified Banco de Sabadell, S.A. of the start of verification and investigation activities related to the following items and periods:

<u>ltems</u>	<u>Periods</u>
Withholdings/Payments on Work/Professional Income Account	07/2012 to 12/2014
Withholdings/Payments on Investment Income Account	07/2012 to 12/2014
Corporate Income Tax	01/2011 to 12/2014
Value Added Tax	07/2012 to 12/2014

These activities are under way and are currently in the documents submission stage, and no proposed tax settlement exists to date. The review of all taxes not verified and not legally required is still pending for other companies which are not taxed within the tax consolidation group in Spain.

The inspections in previous years by the Spanish Tax Authority led to assessments being raised for a total tax liability of  $\notin$ 43,971 thousand, which were contested in their entirety by the bank and the acquired and subsequently merged entities. The Group has, in any event, made suitable provisions for any contingencies that could arise in relation to these tax settlements.

Tax liabilities of a contingent nature could arise as a result of different possible interpretations of the tax rules applicable to certain types of transaction within the banking industry. However, the possibility of such liabilities materialising is remote, and if they did materialise the resulting tax charge would not be such as to have any significant impact on these consolidated annual accounts.

## Note 44 – Related-party transactions

No transactions that could be described as significant were entered into with administrators and management staff of the bank. Those that did take place were in the normal course of the company's business or were conducted at market prices or on the terms normally applicable to employees.

The Group is not aware of any transaction, other than at market prices, involving any person or entity connected in any way to an administrator or to Senior Management.

The most significant balances recognised by the Group in its dealings with related parties, and the effect on the income statement of related-party transactions, are shown below:

Thousand euro

	2016				2015	
	Joint control or signif. Influence (in B.Sab)	Associates	Key personnel	Other related parties (*)	TOTAL	TOTAL

(\*) Perform executive functions.

(1) On 30 September 2013, the Board of Directors approved his appointment as First Deputy Chairman, a position which he held until his death on 31 January 2015.

(2) Held a position as lead independent director between 23 April 2015 and 21 April 2016.

(3) On 29 January 2015, the Board of Directors approved her appointment as member of the Board of Directors in the capacity of independent director. The Annual General Meeting held on 28 May 2015 confirmed the appointment through co-option made by the Board of Directors and approved her appointment as member of the Board of Directors.

(4) On 22 September 2016, he submitted his resignation in effect from the end of the Board of Directors' Meeting on the same date.

(5) On 21 April 2016, the Board of Directors approved her appointment as lead independent director.

(6) On 19 March 2015, the Board of Directors approved his appointment as member of the Board of Directors in the capacity of independent director. The Annual General Meeting held on 28 May 2015 confirmed the appointment through co-option made by the Board of Directors and approved his appointment as member of the Board of Directors. On 21 April 2016 he was given the capacity of non-executive director.

(7) On 23 April 2015 submitted his resignation as director in effect from the Annual General Meeting held on 28 May 2015.

(8) The Annual General Meeting held on 18 May 2015 approved his appointment as member of the Board of Directors in the capacity of independent director.

Aside from the items mentioned above, the members of the Board of Directors have received  $\in$ 64 thousand as fixed remuneration in 2016 ( $\notin$ 71 thousand in 2015) by reason of their belonging to Boards of Directors in Banco Sabadell Group companies or to advisory boards (these amounts are included in the annual report on Directors' remuneration).

Contributions for life insurance premiums covering contingent pension commitments in respect of pension rights accruing in 2016 amounted to  $\notin$ 4,036 thousand ( $\notin$ 3,780 thousand in 2015), of which  $\notin$ 80 thousand are detailed in the table above and  $\notin$ 3,956 thousand correspond to directors for the performance of executive functions.

Emoluments paid to directors for performing executive functions during 2016 totalled €5,254 thousand (€6,021 thousand in 2015).

Loan and guarantee risks undertaken by the bank and consolidated companies for the directors of the parent company totalled  $\leq 10,866$  thousand at 31 December 2016, of which  $\leq 8,232$  thousand comprised loans and receivables and  $\leq 2,634$  thousand related to guarantees and documentary credit ( $\leq 14,155$  thousand in 2015, consisting of  $\leq 11,657$  thousand in loans and receivables and  $\leq 2,498$  thousand in guarantees and documentary credit). The average interest rate charged was 0.79% (0.91% in 2015). Balances of liabilities in 2016 amounted to  $\leq 12,172$  thousand ( $\leq 8,047$  thousand in 2015).

Total Senior Management remuneration accrued during 2016 amounted to €7,312 thousand. Under the applicable regulations, this amount includes the remuneration of the seven Senior Management members plus that of the Internal Audit Director.

Risks undertaken by the bank and consolidated companies for Senior Management (other than executive directors, for whom details are provided above) totalled  $\in$ 8,642 thousand at 31 December 2016 ( $\in$ 8,904 thousand in 2015), comprising  $\in$ 7,946 thousand in loans and receivables and  $\in$ 696 thousand in guarantees and documentary credit (and in 2015, of which  $\in$ 7,832 thousand relate to loans and receivables and  $\in$ 1,072 thousand to guarantees and documentary credit). Balances of liabilities amounted to  $\in$ 1,287 thousand ( $\in$ 678 thousand in 2015).

Share appreciation rights granted to members of the Senior Management, including executive directors, under the 2016 remuneration incentive schemes (see Note 36) resulted in staff expenses of  $\notin$ 2.7 million during the year ( $\notin$ 2.2 million in 2015).

Details of existing agreements between the company and administrators and management staff with regard to compensation upon severance of contracts are set out in the Annual Report on Corporate Governance, which forms part of the Directors' Report.

The administrators and management staff mentioned above are specified below with their positions in the bank at 31 December 2016:

Executive Directors	
José Oliu Creus	Chairman
Jaime Guardiola Romojaro	CEO for Sabadell Group
José Luis Negro Rodríguez	Director-General Manager
Senior Management	
María José García Beato	Deputy Secretary to the Board - General Secretary
Tomás Varela Muiña	General Manager
Miquel Montes Güell	General Manager
Carlos Ventura Santamans	General Manager
Fernando Pérez-Hickman Muñoz	General Manager
Ramón de la Riva Reina	Assistant General Manager
Enric Rovira Masachs	Assistant General Manager

#### Other information about the Board of Directors

Pursuant to Article 229 of Law 31/2014 of 3 December, amending the revised Spanish Capital Companies Act in order to improve corporate governance and strengthen transparency in public limited companies, the directors have notified the company that, during 2016, they and persons related to them, as defined in Article 231 of the revised Spanish Capital Companies Act:

- a. Have not carried out transactions with the Company, without taking into account ordinary operations performed in standard conditions for customers and which were not material, these being understood as those the reporting of which is not necessary to give a true and fair view of the Company's equity, financial position and results.
- b. Have not used the Company's name or used their capacities as directors to unduly influence the course of private transactions.
- c. Have not used corporate assets, including the Company's confidential information, for private purposes.
- d. Have not taken advantage of the Company's business opportunities.
- e. Have not obtained benefits or remuneration from third parties other than the Company and its Group associated with the performance of their duties, except in cases of items in which mere courtesy is involved.

f. Have not carried out activities directly or on behalf of a third party involving competition with the Company, whether on an isolated or potential basis, or which might otherwise place them in permanent conflict with the Company's interests.

The bank has signed a liability insurance policy for the period from 31-12-2015 to 31-12-2016, which covers the entity's administrators and senior management. The total premium paid was €651 thousand.

## Note 46 – Other information

#### Transactions with significant shareholders

No material transactions took place with significant shareholders during the years 2016 and 2015, except as described below; those transactions that did take place were in the company's normal course of business and on an arm's length basis.

According to a significant event issued to the Comisión Nacional del Mercado de Valores (Spanish Securities and Stock Exchange Commission) on 1 October 2015, Banco Sabadell acquired 8,238,084 shares of the Colombian bank Banco GNB Sudameris, S.A., representing 4.99% of its share capital, for a price of USD 50,000,000. The majority shareholder of Banco GNB Sudameris is Gilex Holding, B.V., a subsidiary of Starmites Corporation, S.A.R.L., a company owned by the Gilinski family. On the date of this transaction, Mr Jaime Gilinski Bacal was a significant shareholder of the bank, a capacity which he ceased to hold at the end of 2016.

#### Environmental disclosures

All global Group operations are subject to legal requirements on environmental protection and health and safety in the workplace. The Group considers that it substantially complies with these legal requirements and has procedures in place to encourage and guarantee such compliance.

The Group has taken appropriate measures relating to environmental protection and improvement and to minimise possible environmental impacts, as required by law. A number of Group-wide waste management, consumable recycling and energy saving schemes continued to be implemented during the year. Given the absence of any environment-related contingencies, it was not thought necessary to make any provision for risks or expenses related to environmental protection and improvement.

Section 3 of the Directors' Report provides more details of the bank's environmental policies and actions.

#### Customer Care Service (SAC)

The Customer Care Service is located on the control line of the organisational structure of Banco Sabadell Group and its director, who is appointed by the Board of Directors, reports to the General Secretariat of the bank. Its functions are to handle and resolve complaints and claims from customers and users of the Group's financial services, when these relate to their interests and legally recognised rights arising from contracts, transparency and customer protection regulations or good banking practices.

#### Cases handled

During 2016, the Customer Care Service received 24,529 complaints and claims (21,517 in 2015), of which 22,565 (19,773 in 2015) were accepted, in accordance with the provisions of Finance Ministry Order 734/2004 of 11 March. The number of cases handled, however, was 22,131 (19,650 in 2015) due to the resolution of cases pending from the previous year (663 cases, against 1,097 in 2016). By type, 12.1% were complaints (14.7% in 2015) and 87.9% were claims (85.3% in 2015).

Of the total complaints and claims examined by the Customer Care Service, 57.3% resulted in a decision that was favourable to the customer or user (51.9% in 2015), 1.5% were settled by agreement with the customer or user (3.9% in 2015), in 1.2% of cases the customer withdrew the claim (1.6% in 2015) and 35.1% were resolved in favour of the entity (38% in 2015). At 31 December, 2.6% of cases had yet to be ruled on by the regulatory bodies and the Customer and Stakeholder Ombudsman. Lastly, the Customer Care Service declared itself not to be authorised to resolve 2.3% of the cases.

In addition to its main activity, the Customer Care Service also provides assistance and information to customers and users on matters that do not take the form of complaints or claims, in accordance with Finance Ministry Order 734/2004 of 11 March, and the Regulations for the Protection of Customers and Users of Financial Services of Banco Sabadell Group. In this respect, the Service has handled 1,057 requests for assistance and information during 2016, compared to 408 in 2015.

The average response time to complaints and claims was as follows: 10,078 cases were resolved within 15 days (12,011 cases in 2015), 9,360 cases were resolved between 15 and 30 days (5,046 cases in 2015) and 2,693 cases were resolved in a period of over 30 days (2,593 cases in 2015). The Finance Ministry Order and the bank's Regulations for the Protection of Customers and Users of Financial Services sets forth a maximum response period of 60 days.

#### **Customer and Stakeholder Ombudsman**

In the Group, the role of Customer and Stakeholder Ombudsman is assumed by Mr José Luís Gómez-Dégano y Ceballos-Zúniga. The Ombudsman has the legal capacity to resolve complaints brought by customers and users of Banco Sabadell Group, both in the first and second instances, and for settling issues that are passed on to him by the Customer Care Service.

The Customer and Stakeholder Ombudsman received 1,087 complaints and claims in 2016 (1,284 in 2015), of which 1,074 were accepted. During the year, the Ombudsman has processed and resolved 996 claims (1,150 in 2015), as certain cases had remained unresolved from the previous year. At 31 December 2016, 88 claims remained to be resolved by the Ombudsman (132 in 2015). In 26 cases, the Customer Care Service had yet to submit the corresponding complaints and claims.

Of the total complaints and claims resolved by the Ombudsman, 38.0% were resolved in favour of the entity (32.4% in 2015) and 2.3\% in favour of the customer (2.2% in 2015). Of the remaining cases to be processed and resolved, the bank agreed to customer petitions in 40.3% of the cases (43.7% in 2015). In 17.9% of the cases (17.1% in 2015) the Ombudsman did not issue any judgements due to a lack of authority (without prejudice to the claimants' option to pursue their claims elsewhere). 0.1% of the cases were settled by agreement with the customer or user (0.5% in 2015) and in 1.4% of the cases the customer withdrew the complaint (4.0% in 2015).

## Bank of Spain, the Spanish National Securities Market Commission (CNMV) and the Directorate General for Insurance and Pension Schemes

Under current legislation, customers and users can submit their claims and complaints to the Bank of Spain Market Conduct and Complaints Department, to the CNMV (Spanish National Securities Market Commission) and to the Directorate General for Insurance and Pension Schemes. In any event, it is a prerequisite that the parties concerned first address their complaints to the entity concerned in order to attempt to resolve the conflict.

## Note 47 – Post-balance sheet events

Since 31 December 2016, there have been no post-balance sheet events worthy of mention.

Issued through public offering	-	-	-	-
Other issues	5,144,462	16	5,530,881	17

Banco de Sabadell, S.A.'s over-collateralisation ratio (the nominal value of all the mortgage loans and credit backing the issue of mortgage bonds and covered bonds, divided by the nominal value of issued covered bonds) stood at 218% at 31 December 2016 (258% at 30 June 2016).

As required by Royal Decree 716/2009, implementing certain aspects of Law 2/1981 of 25 March on the regulation of the mortgage market and other matters relating to mortgage lending, the Board of Directors represents that it is responsible for ensuring that the bank has a set of policies and procedures in place to assure compliance with mortgage market regulations.

In line with these policies and procedures related to the Group's mortgage market activities, the Board of Directors is responsible for ensuring compliance with the mortgage market regulations and for implementing the Group's risk management and control procedures (see Note 4 on Financial Risk Management). In terms of credit risk, in particular, the Board of Directors delegates powers and discretions to its Executive Committee, which then sub-delegates authority at each level of decision-making. The internal procedures set up to handle the origination and monitoring of assets that make up the Group's lending and particularly those secured by mortgages, which serve as cover for the Group's issued covered bonds, are described in detail below for each type of loan applicant.

Analyses and decisions on risks undertaken with individuals are based on the scoring tools described in Note 4 on financial risk management. Where necessary, these tools are complemented with the work of a risk analyst, who carries out more in-depth studies of supplementary materials and reports. Furthermore, a series of other information and parameters are considered, such as the consistency of customers' applications and the degree to which these applications are in line with their possibilities; customers' ability to pay based on their current and future position; the value of the property provided as security (as determined by an appraisal carried out by valuation firms authorised by Bank of Spain and which Banco Sabadell's own internal approval processes will, additionally, have shown to be free of any association with the Group); the availability of any additional guarantees; examinations of internal and external databases of defaulters, etc.

One aspect of the decision-making process involves establishing the maximum amount of the loan, based on the assessed value of the assets submitted as security (hereinafter, loan-to-value, or LTV). As a general rule, under internal Group policies the maximum LTV is applicable to purchases by individuals of properties for use as their usual residence and is fixed at 80%. This provides an upper limit below which a range of other maximum LTV ratios of less than 80% are set, having regard to the purpose of the loan.

A further step that must be taken before an application can be decided upon is to review all charges associated with the property on which the loan is to be secured and also any insurance taken out to cover the security. Once a loan application has been approved, the mortgage must be registered with the Property Registry as part of the formalities for arranging the loan.

Concerning approval autonomy levels, the scoring tools are the main reference for determining the feasibility of the loan. Where the loan being sought is above a certain amount, or where factors are present that are not readily captured by a scoring procedure, a risk analyst will be involved. The limit for each autonomy level is based on credit scores, with additional conditions being specified at each level to determine when special intervention is required. A list of exceptions has been drawn up, based on the particular circumstances of the borrower and the operation, and these exceptions are covered in the Group's internal rules and procedures.

As mentioned in Note 4 on financial risk management, the Group has an integrated monitoring system in place which uses early warning tools that enable the early detection of borrowers that could have compliance issues. A key part of this process consists of well-established procedures to review and validate the guarantees provided.

#### Businesses (other than construction and/or real estate development)

Analyses and decisions concerning the undertaking of risks are based on rating tools and "basic management teams", formed by one person from the business side and one from the risks side at different decision-making levels, both described in Note 4 on financial risk management. A range of other data and parameters is also taken into account, such as the consistency of the application, ability to pay and the nature of the security provided (as determined by an appraisal carried out by valuation firms authorised by Bank of Spain and which Banco Sabadell's own approval processes will, additionally, have shown to be free of any association with the Group) and considering any supplementary guarantees, the "fit" between the company's working capital and its total sales; the appropriateness of the total amount borrowed from the Group based on the business' own funds, examinations of internal and external databases of defaulters, etc.

Business loans are likewise subject to processes to evaluate any charges associated with the security provided any mortgages given must be registered with the Property Registry.

An autonomy level is assigned on the basis of the expected loss associated with a transaction. There are several levels at which decisions may be taken. Each of these levels has a "basic management team", one member of which will be on the business side and one on the risks side. All loan approvals must be the result of a joint decision. As with individual customers, a set of exceptional circumstances has been drawn up for borrowers and sectors, and these are provided for in the Group's internal regulations.

As in the case of individuals, operations are monitored using early warning tools. There are also procedures in place to ensure that the borrower's security and guarantees are constantly being reviewed and validated.

#### Businesses (construction/real estate development)

Real estate assets and real estate developer loans are handled by the bank's Asset Transformation and Industrial and Real Estate Holding division. This division is organisationally structured to focus on the specialised management of assets of this type based on knowledge of the status and development of the realestate market. Managing the risks in this portfolio is the responsibility of the bank's Asset Risk unit, part of the Risk Management division.

Risk assessments are carried out by teams of specialist analysts who operate in conjunction with the real estate lending units to ensure that a risk management perspective is combined with a view based on direct contact with customers.

Factors influencing the decision include the borrower's credit rating assessment together with a series of other considerations such as the financial position and net worth of the business, revenue and cash flow projections, any business plans and, most particularly, an in-depth study of current credit risks whether related to completed developments, land holdings or other assets.

There is a scale of maximum LTV ratios defined internally by the Group based on the purpose of the loan, quality of the developer and an internal appraisal of the development.

Decision-making powers and discretions are assigned according to the specific types of asset portfolio handled within this business segment, which may be related to new projects, sales, purchases or action plans. All these different circumstances are provided for in the entity's internal rules and procedures.

Loans are subject to the kind of continuous monitoring that asset management necessarily implies. For completed developments, monitoring will focus on sales or rental figures; for developments under construction, the state of progress of the work. Constant checks are made that commitments are being adhered to and, as with non-real estate businesses, procedures are in place for the continuous review and validation of the guarantees provided.

#### Other matters

Banco Sabadell Group is an active participant in the capital markets and has a number of funding programmes in operation (see Note 4). As one element of the Group's funding strategy, Banco de Sabadell, S.A. is an issuer of covered bonds. Covered bond issues are backed by the bank's portfolio of loans secured by real estate mortgages granted by the issuer that meet the eligibility criteria defined in Royal Decree 716/2009 regulating the mortgage market and other standards of the mortgage and financial system in Spain. The Group has control procedures in place to monitor its entire portfolio of mortgage loans and credit (one of which involves maintaining special accounting records of all mortgage bonds, as well as records of any financial derivatives associated with them). There are also procedures in place to verify that all loans and other assets meet the eligibility criteria for use as collateral in issues of covered bonds, and to ensure that bond issues are kept within their maximum limits at all times. These procedures are all regulated by current mortgage market regulations.

# Schedule IV – Information required to be kept by issuers of territorial bonds and regarding the special territorial bonds record

Details of the data from the special accounting record of territorial bonds of Banco Sabadell, referred to in the sole additional provision of Royal Decree 579/2014, required by Circular 4/2015 of the Bank of Spain, are given below:

#### A) Asset operations

Details of the aggregate nominal values of the portfolio of loans and credit with general governments at 31 December 2016 and 2015 backing issues, their eligibility and the extent to which they qualify as such for territorial bond hedging purposes are presented in the following table:

|--|

		2016	
		Residents in	Residents in other countries in the European
	Total	Spain	Economic Area
Central governments	278,620	278,620	-
Regional governments or governments in autonomous communities	1,206,406	1,206,406	-
Local governments	739,232	739,232	-
Total loans and credit portfolio	2,224,258	2,224,258	-

Thousand euro			
		2015	
		Residents in	Residents in other countries in the European
	Total	Spain	Economic Area
Central governments	236,245	236,245	-

Total loans and credit portfolio	1,792,474	1,792,474	-

#### B) Liability operations

Information on issues carried out and collateralised by the bank's portfolio of loans and credit to general governments is provided in the following table, analysed by residual maturity and according to whether the sale was by public offering or otherwise:

Nominal value	2016	2015
Territorial bond in issue	900,000	900,000
Of which: Not reflected under liabilities on the balance sheet	900,000	900,000
Issued through public offering	-	-
Time to maturity up to one year	-	-
Time to maturity from one to two years	-	-
Time to maturity from two to three years	-	-
Time to maturity from three to five years	-	-
Time to maturity from five to ten years	-	-
Time to maturity more than ten years	-	-
Other issues	900,000	900,000
Time to maturity up to one year	-	-
Time to maturity from one to two years	-	-
Time to maturity from two to three years	-	-
Time to maturity from three to five years	900,000	900,000
Time to maturity from five to ten years	-	-
Time to maturity more than ten years	-	-

The over-collateralisation ratio (the nominal value of all the loans and credit to general governments backing the issue of territorial bonds divided by the nominal value of territorial bonds issued) for Banco de Sabadell, S.A. stood at 247.14% at 31 December2016 (199.16% at 31 December 2015).

As required by Royal Decree 579/2014, the Board of Directors represents that it is responsible for ensuring that the bank has a set of policies and procedures in place in terms of the financing activities of public entities to ensure compliance with regulations governing the issue of these securities (see Note 4 on financial risk management).

In terms of credit risk, in particular, the Board of Directors delegates powers and discretions to its Executive Committee, which then sub-delegates authority at each level of decision-making. The internal procedures set up to handle the origination and monitoring of the assets that make up the Group's loans and receivables and particularly assets with public entities, which back the Group's territorial covered bond issues.

## Schedule V – Details of outstanding issues and subordinated liabilities of the Group

## Debt securities issued

The breakdown of the Group's issues at 31 December 2016 and 2015 is as follows:

Thousand euro

## Schedule VII – Annual banking report

## INFORMATION REQUIRED UNDER ARTILE 89 OF EUROPEAN PARLIAMENT AND COUNCIL DIRECTIVE 2013/36/EU OF 26 JUNE 2013

This information has been prepared in compliance with Article 89 of Directive 2013/36/EU of the European Parliament and Council of 26 June 2013 relating to access to the activity of credit institutions and the prudential supervision of credit institutions and investment firms, amending Directive 2002/87/EC and repealing Directive 2006/48/EC and Directive 2006/49/EC, and the transposition thereof into Spanish national legislation in accordance with Article 87 and Transitional Provision 12 of Law 10/2014 of 26 June 2014 on the arrangement, supervision and solvency of credit institutions published on the Official State Gazette of 27 June 2014.

In accordance with the above regulations the following information is presented on a consolidated basis for the financial year 2016:

	Turnover	No. equivalent full	Gross income	Corporate income
	(thousand euro)	time employees	before tax	tax
Spain	4,034,753	16,680	665,161	(187,738)
United Kingdom	1,209,891	7,239	253,442	(81,216)
United States	159,176	683	86,880	(35,694)
Rest	66,878	396	13,939	1,079
Total	5,470,698	24,998	1,019,422	(303,569)

At 31 December 2016, income from the Group's assets calculated dividing the consolidated gains/(losses) during the year between total assets amounts to 0.34%.

This information is available in Schedule I to these consolidated Annual Accounts for the year ended 31 December 2016, in which the companies operating in each jurisdiction are listed, including among other details their names, geographical location and area of activity.

As can be seen in Schedule I, the main activity carried out by the group in the different jurisdictions in which it operates is banking, and fundamentally commercial banking through an extensive range of products and services for large and medium enterprises, SMEs, businesses and self-employed professionals, professional groups, other individuals and Bancassurance.

For the purposes of this information, business volume is regarded as the gross income reflected on the consolidated income statement for December 2016. Data on full-time equivalent employees have been obtained from the template of each company/country at the end of 2016.

The amount of public grants and aid received is not material.

## CONSOLIDATED REPORT OF THE DIRECTORS FOR 2016

This report has been prepared in line with the recommendations contained in the Guide for the preparation of directors' reports by listed companies, published by the Spanish National Securities Commission (CNMV) in July 2013.

## GOVERNANCE STRUCTURE AND STRATEGY OVERVIEW

## 1.1. Organisation structure

The Group is organised into the following business units:

- Banking business Spain includes the following business units for customers:
  - Retail and Business Banking: this is the largest single business line in the Group; it focuses on
    offering financial products and services to large and medium-sized enterprises, SMEs, retailers and
    sole proprietors, individuals and professional groups, Consumer Finance and Bancassurance.

Sabadell is the reference brand which operates in the majority of the Spanish market. It also operates under the following brands;

- SabadellHerrero in Asturias and Leon.
- SabadellGuipuzcoano in the Basque Country, Navarre and La Rioja.
- SabadellGallego in Galicia.
- SabadellSolbank in the Canary Islands, Balearic Islands, and coastal regions in the South and the Levante region.
- ActivoBank focuses its activity on customers who operate exclusively over the Internet and/or by phone.
- Corporate Banking; this unit offers products and services to large enterprises and financial institutions, both national and international. Its activities encompass corporate banking, structured finance, and Trade Finance & IFI.
- Markets and Private Banking: this unit offers savings and investment management services to Banco Sabadell customers, including the analysis of investment options, market trading, active asset management and custody services. It comprises the following businesses, which are managed on an integrated basis: SabadellUrquijo Private Banking, the Investment, Products and Analysis unit, Treasury and Capital Markets, and Securities Trading and Custody.

Asset Transformation manages the bank's real estate balance sheet with a general overview of the entire transformation process, providing services to the real estate portfolio of the Group and of third parties, with a commitment to business and maximising value.

- Banking business United Kingdom: The TSB franchise includes retail business conducted in the United Kingdom, which includes current and savings accounts, personal loans, credit cards and mortgages. For 2015, it only includes TSB Banking Group PLC and 6 months of results.
- Banking business Americas: this area is made up of a number of business units, investees and representative offices that engage in corporate banking, private banking and retail banking activities related to finance. The bank has the capacity and experience to provide all types of banking services, from the most complex and specialised for large enterprises, such as structured project finance operations, to products for individuals. The business is carried out through the Banco Sabadell Miami Branch, Sabadell United Bank and Sabadell Securities in the United States and Sabadell Capital SOFOM and Banco Sabadell Institución Banca Múltiple in Mexico.
- BancSabadell d'Andorra: Banco Sabadell holds a 50.97% stake in BancSabadell d'Andorra, an entity incorporated in the Principality of Andorra and which targets individuals with medium-to-high earnings and leading companies in the Principality of Andorra.

Banco Sabadell is the parent company of a group of companies which at 31 December 2016 numbered a total of 159, of which 127 are considered part of the group and 32 are associates (at 31 December 2015, they numbered 170, of which 127 were considered Group companies and 43 were associates).

The Board of Directors is the highest decision-making body of the company and its consolidated group, as it is responsible under the law and the Articles of Association for managing and representing the bank. The Board of Directors is basically configured as a supervision and control instrument, delegating the management of ordinary business to executive bodies and the management team.

The Board of Directors is governed by clear-cut and transparent governance regulations, specifically the Articles of Association and Board Regulations in accordance with corporate governance standards.

Its responsibilities include:

a) Approving the Company's general strategies;

b) Appointing and, if appropriate, discharging management staff in the various subsidiaries;

c) Identifying the Company's main risks and implementing and monitoring the appropriate internal control and reporting systems;

d) Setting policies on the reporting and disclosure of information to shareholders, the markets and the general public;

e) Setting policies on the treasury portfolio in accordance with any guidelines laid down at the General Meeting of Shareholders;

f) Approving the Annual Report on Corporate Governance;

g) Authorising transactions between the Company and its management staff and significant shareholders that may pose a conflict of interest; and

Generally deciding on business or financial transactions that are of particular importance for the Company.

The composition of the Board of Directors as of 31 December 2016 is as follows:

José Oliu Creus	Chairman
José Javier Echenique Landiribar	Deputy Chairman
Jaime Guardiola Romojaro	CEO for Banco Sabadell
Aurora Catá Sala	Director
JoaquÍn Folch-Rusiñol Corachán	Director
María Teresa Garcia-Milá Lloveras	Director
José Manuel Lara García	Director
Joan Llonch Andreu	Director
David Martínez Guzmán	Director
José Manuel Martínez Martínez	Director
José Ramón Martínez Sufrategui	Director
António Vítor Martins Monteiro	Director
José Luis Negro Rodríguez	Director-General Manager
David Vegara Figueras	Director
Miquel Roca i Junyent	Non-voting Secretary
María José García Beato	Non-voting Deputy Secretary

The Board of Directors has implemented a series of clear-cut and transparent rules and regulations on corporate governance, which are in line with Spanish regulations on corporate governance. The majority of the Board members (11 of 14) are non-executive directors, including 7 independent directors.

On 22 September 2016, the Board of Directors approved the appointment of Mr Manuel Valls Morató as Independent Director. On 20 January 2017, his suitability was confirmed by the European Central Bank and this appointment was registered with the Bank of Spain official Senior Officers Register (*Registro de Altos Cargos*), but it has not yet been registered with the Mercantile Registry.

On 20 January 2017, Proprietary Director Mr António Vítor Martins Monteiro submitted his voluntary resignation from his post of Director.

At present, there are five delegated committees in operation to which the Board of Directors delegates functions by making use of the powers conferred on it in the Articles of Association; meetings of the committees are attended by members of the General Management.

These Committees are:

- The Executive Committee
- The Audit and Control Committee
- The Appointments Committee
- The Remuneration Committee
- The Risk Committee

The composition of these Committees at 31 December 2016 is shown in the table below:

Position	Executive	Audit	Appointments	Remuneration	Risk

## **Executive Committee**

The Executive Committee is responsible for coordinating the bank's Executive Management, adopting to this end any resolutions and decisions within the scope of the powers vested in it by the Board of Directors, for monitoring usual activities in the bank. Any decisions adopted during Committee meetings are reported to the Board of Directors, without prejudice to any other functions assigned to the Executive Committee in the Articles of Association and the Board's Regulations.

#### Audit and Control Committee

The Audit and Control Committee is responsible for functions established by Law, including:

a) Reporting to the General Meeting of Shareholders on all issues raised by shareholders that are within its remit;

b) Monitoring the effectiveness of the company's internal controls, any Internal Audit carried out and the risk management systems, including those for fiscal risks, in place, and discussing with account auditors or auditing firms any significant internal control weaknesses identified in the course of the audit;

c) Overseeing the preparation and presentation of regulated financial information;

d) Making recommendations to the Board of Directors, for submission at the General Meeting of Shareholders, on the appointment of external account auditors and their terms of engagement, the scope of their professional mandate and, if applicable, the renewal or non-renewal of their engagement; overseeing compliance with the audit agreement and ensuring that the opinion on the annual accounts and the main findings of the auditor's report are expressed in a clear and precise way;

e) Advising on the annual accounts and the quarterly and half-yearly financial statements and any prospectuses required to be filed with the regulatory or supervisory authorities; monitoring regulatory compliance and ensuring that generally accepted accounting principles have been correctly applied, and reporting on any proposed amendments to those principles;

f) Maintaining working relations with external auditors to receive information on, and enquire into, any issues that could compromise their independence, to be reviewed by the Committee, and any other matters related to the account auditing process and auditing standards;

g) Advising on any issues referred to the Committee by the Board of Directors that are within its remit;

h) Any other matters for which the Committee is responsible by law or under the Articles of Association or any of their implementing regulations, or under any generally applicable rules on good governance.

Pursuant to its Regulations, the Audit and Control Committee performs functions related to the process of financial reporting and internal control systems, functions related to account auditing, functions related to economic and financial information, functions related to internal audit servicing and functions related to compliance with regulatory requirements, legal requirements and good governance codes, specifically:

a) Overseeing compliance with the law, internal regulations and regulatory provisions concerning Company activities;

b) Assessing the effectiveness of, and compliance with, the Regulations of the General Meeting of Shareholders, the Board of Directors' Regulations, the Company's Code of Conduct and, particularly, the Internal Code of Conduct for Securities Market Trading;

c) Reviewing compliance with the Company's rules on corporate governance and submitting recommendations for improvement to the Board as it sees fit; and

d) Supervising the corporate governance report to be approved by the Board of Directors and included in the annual report.

### **Appointments Committee**

The Appointments Committee shall have, as a minimum, the following basic responsibilities, without prejudice to any other functions assigned to the Appointments Committee by Law, in the Articles of Association, the Board of Directors and the Board's Regulations:

a) Make recommendations to the Board of Directors on the appointment of independent directors for their coopted appointment or for their subjection to the decision at the General Meeting of Shareholders, in addition to any proposals for re-electing or discharging these directors;

b) Submit the proposals for the appointment of the remaining directors for their co-opted appointment or for their subjection to the decision at the General Meeting of Shareholders, in addition to any proposals for reelecting or discharging these directors;

c) Ensure compliance with the qualitative composition of the Board of Directors, in accordance with the provisions of Article 53 of the Articles of Association;

d) Evaluate the suitability, skills, knowledge and experience necessary for members of the Board of Directors;

e) Submit the proposals for the appointment and discharge of senior management staff and of the Designated Group;

f) Report the basic terms and conditions of the contracts of the executive directors and senior management staff;

g) Examine and organise the plans of succession of the Chairman of the Board and the first executive director of the bank and, where applicable, present proposals to the Board;

h) Establish an objective for gender diversity in the Board of Directors and prepare ideas on how to reach this objective.

### **Remuneration Committee**

The Remuneration Committee shall have, as a minimum, the following basic responsibilities, without prejudice to any other functions assigned to the Remuneration Committee by Law, in the Articles of Association, by the Board of Directors and the Board's Regulations:

a) Propose to the Board of Directors the directors' remuneration policy;

b) Propose to the Board of Directors the remuneration policy of General Managers and those performing Senior Management functions who directly report to the Board, Executive Committee members or CEOs, and the individual remuneration and other contractual conditions of the Executive Directors, ensuring their compliance;

c) Regularly review the remuneration policy;

d) Report on the schemes for remuneration in shares and/or options;

e) Regularly review the general principles in matters of remuneration, and the remuneration schemes of all employees, ensuring that the latter are in line with these principles;

f) Ensure that remuneration is transparent;

g) Ensure that any potential conflicts of interest do not hinder the impartiality of external consultants;

h) Verify the information on remuneration contained in the various corporate documents, including the Directors' Remuneration Report.

## **Risk Committee**

The Risk Committee shall have, as a minimum, the following basic responsibilities, without prejudice to any other functions assigned to the Risk Committee by Law, in the Articles of Association, the Board of Directors and the Board's Regulations:

a) Supervising the implementation of the Risk Appetite Framework;

b) Determining and making recommendations to the full Board on annual levels of investment in the real estate market, as well as criteria and volumes applicable to all different types of such investments;

c) Reporting to the full Board on the performance of its functions, in accordance with this Article and any other applicable legal provisions or provisions in the Articles of Association;

d) Making quarterly reports to the full Board on the levels of risk taken, investments carried out and on their evolution, as well as on any possible repercussions on the Group's income caused by fluctuations in interest rates and their adjustment to their VAR approved by the Board;

e) Monitoring and detecting any breaches of the approved tolerance thresholds, ensuring the activation of the corresponding contingency plans established to this effect;

f) Reporting to the Remuneration Committee on whether the employees' Remuneration Programmes are consistent with the bank's risk, capital and liquidity levels.

#### 1.2. Operation: main objectives achieved and actions implemented

The development of the Group's business is geared towards profitable growth that generates value for shareholders through a business diversification strategy based on profitability, efficiency and service quality, with a conservative risk profile within the framework of ethical and professional codes and taking into account the interests of different stakeholders.

The bank's management model is focused on long-term customer retention, through on-going efforts designed to build customer loyalty by taking initiatives and being proactive in its relationship with customers. The bank has a comprehensive offering of products and services, a qualified work force, a technology platform that supports growth and a constant focus on the pursuit for quality.

Since the onset of the financial crisis, Spain's banking sector has been undergoing an unprecedented process of consolidation. Higher levels of capital, stricter provisioning requirements, the economic recession and pressure from capital markets are some of the factors that have driven Spanish entities to merge and thus expand their footprint, maximise efficiency and strengthen their balance sheets.

During the last decade, Banco Sabadell has expanded its geographical footprint and increased its market share in Spain through several acquisitions, the largest of which was Banco CAM in 2012, which enabled it to significantly expand its balance sheet. In 2013 Banco Sabadell was able to undertake further corporate actions on economically acceptable terms in a context of banking sector restructuring. Following the acquisition of the Penedès branch network, Banco Gallego and Lloyds España in 2014, Banco Sabadell is well positioned to grow organically and to benefit from the economic recovery in Spain.

In terms of the completed acquisitions, synergies from the Banco CAM merger exceeded expectations, and the technological and operational integration of the Penedès branch network into that of Banco Sabadell was successfully completed in 2013, followed by the integration of Banco Gallego and Lloyds España in 2014.

Acquisitions and organic growth in recent years have enabled Banco Sabadell to strengthen its position in some of Spain's most prosperous regions (e.g. Catalonia, Valencia and the Balearic Islands) and to increase its market share in other key areas. Based on the most recent information available, Banco Sabadell's market share in Spain stands at 7.6% in lending and 6.8% in deposits (November 2016). Furthermore, Banco Sabadell stands out in products such as ICO funding, with a market share of 35.6% (December 2016); trade credit with a market share of 9.7% (November 2016); payrolls with a market share of 9.1% (December 2016) and POS turnover with a market share of 14.4% (September 2016).

In terms of international business, Banco Sabadell has always been exemplary. This has not changed in 2016 and Sabadell has continued being present in strategic areas and has accompanied companies in their international activity, reaching market shares of 29.4% and 15.1 % in documentary credit for exports and imports, respectively (November 2016).

As regards internationalisation, the current plan has represented Banco Sabadell's definitive leap towards becoming a global bank. Over the last three years, we have expanded our international footprint, and our main milestones have been: the acquisition of British bank TSB and the entry into the Mexican market, after obtaining a licence to operate in this country as a commercial bank. During this period, we have also opened two representative offices in Colombia and Peru, with the purpose of originating corporate business. Thus, at December 2016, more than 30% of the Group's lending was generated outside of Spain (24% in the United Kingdom and 8% in the Americas and other countries/regions), comfortably exceeding the objective that we had set ourselves of having 10% of our lending outside of Spain by the end of the TRIPLE Plan.

Short-term priorities in TSB are the implementation of its current business plan on one hand, and technology migration and integration on the other. In the medium term, the high market share of Banco Sabadell in the SMEs sector in Spain, together with its international experience, will be a sound added-value tool to support TSB in the development of efficient and high-quality services for SMEs in the United Kingdom.

In 2016, Banco Sabadell has maintained its policy of removing problematic assets, reducing them by  $\leq 2,962$  million, and it has implemented allowances of  $\leq 1,427$  million, allowing it to achieve an NPL coverage ratio of 51.6%.

#### 2 – BUSINESS PERFORMANCE AND RESULTS

#### 2.1. Economic and financial background

2016 began with significant turbulence in financial markets in a situation in which oil prices declined to minimums not seen in over a decade and in which concerns arose regarding China and, in general, the wellbeing of the world economy. Actions by central banks then began to calm the situation. In fact, financial markets have managed to be relatively successful in overcoming the principal, and in some cases unpredictable, political events which have taken place throughout the year.

Politics have increasingly taken centre stage and have been a clear conditioning factor for financial assets. Events which particularly stood out include the holding and subsequent outcome of the referendum in the United Kingdom on the country's membership of the European Union (EU), the surprising victory of Republican candidate Donald Trump in the United States presidential elections and Italy's referendum on Senate reforms.

The outcome of the referendum in the United Kingdom, which was held on 23rd June, was a vote in favour of leaving the EU with 51.9% of the votes. This result led to David Cameron standing down as Prime Minister, and the appointment of Theresa May as his successor. The British government has announced its intention to trigger Article 50, which is the official notification of a country's request to withdraw from the European Union, before the end of March 2017. The UK has also indicated that its priorities in the negotiations will be to control immigration and maintain the greatest possible access to the European market.

In the United States, Republican candidate Donald Trump won the presidential elections held on 8th November, and the Republican Party maintained control over Congress and the Senate. Trump has proposed interventionist and protectionist policies. In fiscal terms, he intends to adopt an expansionary policy focused on tax cuts and an increase in expenditure on defence and infrastructures.

In Italy, a majority voted against Senate reforms in a referendum held on 4th December (with 59.1% of the votes). Following the outcome, Matteo Renzi announced his resignation as Prime Minister and a new continuist government was formed under the leadership of former Minister of Foreign Affairs, Paolo Gentiloni.

In terms of economic activity, global growth has remained at relatively low levels in a context of lower potential growth rates than those observed prior to the international financial crisis. The euro area has not been overly affected by the UK referendum and its growth has continued to be driven by domestic demand. In the UK, the impact of the referendum on economic activity has been limited and has mainly affected the construction industry and, to a lesser extent, the manufacturing industry. In the US, activity has become increasingly dynamic over the year, and the labour market has performed well. As regards Japan, economic growth has been relatively slow despite new fiscal stimulus measures.

In emerging economies, the growth of the main countries has continued to be slow or has even declined compared to one year previously, in an environment in which further steps have been taken in the deleveraging process. In the first instance, concerns regarding the economic and financial situation in China and Brazil led to a significant increase in risk aversion and capital outflows in emerging countries were intense. Subsequently, however, this situation calmed down, supported by: (i) more lax approaches exhibited by central banks in developed countries; (ii) stimulus policies introduced in China to support growth and (iii) optimism in terms of the change in government in Brazil. As a result of this, the deleveraging process in emerging economies started to progress in a more orderly fashion. Towards the end of the year, Trump's victory in the United States resulted in a downward revision of economic outlooks for Mexico, insofar as that this electoral victory could constitute a step backwards in the process of integrating both economies that has taken place in recent decades.

The Spanish economy has maintained a positive trend, with an increase in GDP in excess of 3.0% and with unemployment rates at minimum levels not seen since 2009. As regards the real estate market, this has improved, and housing prices have continued to grow positively. In terms of the external sector, current accounts will have closed the year with a surplus for the fourth consecutive year. In politics, the failure to form government following the general elections held in December 2015 led to another election being called for 26th June. In June, the Spanish Conservative Party, PP, was once again victorious, obtaining more votes and MPs than in December, although they again failed to achieve an absolute majority. The investiture of Mariano Rajoy was possible thanks to the support of Ciudadanos and the abstention of PSOE following the latter's internal crisis which arose during the attempts to form government, and which ended with the resignation of its General Secretary, Pedro Sánchez.

Inflation has continued to be below the targets of the monetary policies in the main developed economies. In the euro area, inflation returned to negative figures at the beginning of the year as a result of the fall in oil prices. Inflation then recovered, reaching positive figures, coinciding with the upturn in crude oil prices. In the UK, the devaluation of the pound as a result of the referendum has driven prices upwards. In the US, the underlying index (index excluding food products and energy) reached maximum levels last reached in 2012 in an environment in which surplus economic capacity has continued to be reduced.

Global financial markets started the year with a very negative tone due to the fall in oil prices, continued capital outflows from China and concerns over the US economy. The situation was later corrected thanks to reduced fears of a global economic recession, the upturn in crude oil prices, lax monetary measures adopted by China and the European Central Bank (ECB) and the more lax tone of the US Federal Reserve (Fed). Following the referendum in the UK at the end of June and Trump's election as President of the United States in November, significant changes also took place in financial markets. However, these events did not lead to any poor performance of financial markets or liquidity problems.

Central banks in the main developed economies have generally maintained an accommodating tone, although in some regions this is beginning to change. The ECB announced new lax monetary measures throughout the year. In March, it cut the deposit interest rate to -0.40% and the benchmark interest rate to 0.00%. It also announced an increase in the monthly rate of asset purchases (to €80 billion per month) and included corporate bonds as an eligible asset under this programme. In December, the ECB announced an extension of its asset purchase programme to the end of 2017 (from March 2017), with a reduction in purchase rates from April (down to €60 billion). It also introduced various technical changes in its programme to ease its implementation (e.g. the possibility of buying government bonds with a lower yield than the marginal deposit interest rate). Furthermore, in 2016 new targeted long-term financing operations have been held to encourage banks to grant credit to the private sector. In the UK, Bank of England introduced a significant stimulus package in August, designed to offset the potential negative effects of Brexit. In particular, it announced a decrease in the benchmark interest rate to 0.25%, a reactivation of the asset purchase programme (public and corporate debt) and a new programme to stimulate the granting of credit to the real economy. Subsequently, coinciding with the upward revision of inflation outlooks, it adopted a neutral approach and indicated that its monetary policy can respond in either direction. In the US, the Fed increased its Fed funds rate in December, to 0.50-0.75%, one year after the previous increase. Lastly, Bank of Japan, after placing its marginal deposit interest rate in negative figures (-0.10%) for the first time in January, announced a significant change to the implementation of its monetary policy in September. In particular, it set a target level for the long-term yield of Japanese government bonds of close to 0.00%.

Yields of long-term government bonds in the main developed economies have remained at reduced levels. Throughout the year, yields reached historical minimums. The yield of 10-year German government bonds went so far as to reach negative figures for the first time in history. Yields of government bonds were subjected to downward pressure during the first half of the year due to international financial turbulence at the start of the year and uncertainty surrounding the results of the referendum in the UK. In the case of Germany, the downward slide of inflation forecasts and the ECB asset purchase programme also contributed to contain yields. After the summer months, there was a general upturn in returns, boosted by the increase in the number of expected hikes in Fed funds rates, the lower economic impact expected from Brexit, the election of Trump as President of the United States and the possibility of tapering the ECB asset purchase programme in 2017.

Risk premiums in countries in the European periphery ended the year at levels similar to or above those of the previous year. Risk premiums have been driven upwards by factors such as financial instability during the first quarter and the outcome of the US elections. By countries, significant differences have been observed. Performance in Spain, where the spread has barely increased, was clearly better than Italy and Portugal. The risk premium in Italy has been affected by concerns regarding the domestic financial system and uncertainty surrounding the referendum on Senate reforms. The risk premium in Portugal, aside from being affected by politics and the situation of the banking system, has been exposed to fears that the credit rating agency DBRS might withdraw the investment grade from Portuguese government bonds.

In Forex markets, the performance of the sterling pound has particularly stood out, as it has significantly depreciated against its main currency pairs as a result of uncertainty associated with the referendum on the UK's membership of the EU and its subsequent outcome. The US dollar has appreciated against the euro, largely explained by fluctuations in the final quarter of the year, in which the dollar benefited from growing expectations surrounding increases in the Fed funds rate. Lastly, the yen continued its upward trend until summer, boosted by financial instability at the beginning of the year and the increase in uncertainty regarding Brexit, and despite Bank of Japan adopting negative deposit interest rates. In the last quarter of the year, however, the yen was able to almost fully return to its previous situation as a result of the Fed being more willing to increase its Fed funds rate.

In equity markets, European stock markets performed differently in different countries. Improvements in indices in Germany and France are in sharp contrast with the declines in Spain and, especially, Italy. In general, following the declines at the beginning of the year, the performance of the various indices in the European continent did not exhibit clear trends in any particular direction, aside from the improvements at the end of the year. Indices have proven to be resilient to events such as the outcome of the UK referendum. The large volume of liquidity from the main central banks have contributed to this. S&P in the US and the FTSE 100 in the UK ended the year with significant improvements. In euros, however, the UK index declined slightly due to the devaluation of the pound.

Lastly, financial markets in emerging countries exhibited volatile performance throughout the year. Following the sharp upturn of risk premiums that took place in January and February, risk premiums then normalised and in August they reached minimum levels not seen since 2014, in an environment characterised by an increase in global liquidity thanks to monetary policies in developed countries. A the end of the year, however, Trump's victory and greater expectations of interest rate hikes in the US led to a new increase in risk premiums, with premiums reaching pre-Brexit referendum levels. Markets in Mexico were negatively and substantially affected by Trump's electoral victory in the US. In the final quarter of the year, Turkey also stood out in a negative light due to uncertainty surrounding its political situation and economic management.

## 2.2. Key financial and non-financial indicators

The key figures for the bank, including financial and non-financial data of critical importance for the management of the bank, are set out below:

		2016	2015	Change (%)
Balance sheet (thousand euro)	(A)	2016	2015	year-on-year
Total assets		212,507,719	208,627,771	1.9
Gross lending to customers		212,007,710	200,021,111	1.5
excluding repos		150,087,283	152,696,839	(1.7)
Gross lending to customers		150,095,213	153,425,314	(2.2)
On-balance sheet funds	(1)	160,982,910	162,974,003	(1.2)
Of which: on-balance sheet customer funds	(2)	133,456,633	131,489,191	1.5
Mutual funds		22,594,193	21,427,252	5.4
Pension funds and insurance products sold by the Group		14,360,418	11,951,922	20.2
Funds under management	(3)	201,588,802	200,355,081	0.6

Market capitalisation (thousand euro)	(11)	7,430,168	8,893,166	
Net attributed earnings per share (EPS)(euro)		0.13	0.13	
Book value per share (euro)	(12)	2.30	2.26	
Price/book value		0.57	0.72	
PER (share price / EPS)		10.46	12.55	
Other data				
Branches		2,767	2,873	
Employees		25,945	26,090	
Number of customers (million)		11.9	11.4	

- (A) The purpose of these key figures is to provide a general overview of year-on-year changes in the main items on the Group's consolidated balance sheet, focusing especially on data related to lending and customer funds.
- (B) This section sets out key components of the income statement for the last two years.
- (C) The ratios in this section of the table have been included to give a meaningful indication of profitability, efficiency and capital adequacy in the last two years.
- (D) This section gives some key balances related to risk management within the Group, as well as the most significant ratios related to risk.
- (E) This section provides information related to the share price and other stock market ratios and indicators.
- (1) Includes customer deposits, debt securities issued and liabilities under insurance and reinsurance contracts.
- (2) Includes customer deposits (ex repos) and other liabilities placed via the branch network: mandatory convertible bonds, non-convertible bonds issued by Banco Sabadell, promissory notes and others.
- (3) Includes on-balance sheet funds, mutual funds, pension funds, asset management and insurance products sold by the Group.
- (4) Consolidated income during the financial year / average total assets.
- (5) Profit attributable to the Group / average own funds (not treating profit attributable to the Group as part of own funds).
- (6) Profit attributable to the Group / average own funds (not treating profit attributable to the Group as part of own funds and deducting goodwill).
- (7) Staff expenses and other administrative expenses /gross income. To calculate these ratios, in 2015 gross income was adjusted considering only recurrent net trading income (NTI).
- (8) Core capital / risk-weighted assets (RWA).
- (9) Tier 1 capital / risk-weighted assets (RWA).
- (10) Total capital / risk-weighted assets (RWA).
- (11) Number of shares by quoted market price at year-end.
- (12) Own funds / Number of shares.

## 2.3. Financial review

### Balance sheet and income statement

The process to acquire 100% of shares in TSB and thereby become holder of 100% of its share capital was completed in 2015 (see Note 2 to these annual accounts).

As a result, the income statement accumulated figures at 2016 are not comparable with those of the previous year.

Banco Sabadell and its group ended 2016 with a net attributed profit of  $\notin$ 710.4 million ( $\notin$ 531.1 million excluding TSB).

Positive performance of the ordinary business, strict control of recurring operating expenses, judicious management of customer spreads and the continuous reduction of problematic assets were the main factors underlying Banco Sabadell's business performance in 2016.

#### Balance sheet

At the end of 2016, total assets for Banco Sabadell and its group amounted to €212,507.7 million (€168,787.3 million excluding TSB), compared with the 2015 year-end figures of €208,627.8 million (€165,249.6 million excluding TSB).

			Change (%)
	2016	2015	year-on-year
Cash and cash balances at central banks and other demand deposits (**)	11,688,250	7,343,481	59.2

Gross performing loans amounted to €140,557.3 million at 2016 year-end (€106,304.6 million excluding TSB). Year-on-year, they increased by 0.1% (1.7% excluding TSB), and the reduction of non-performing assets was - 22.7% (the same reduction excluding TSB). Secured mortgage loans formed the largest single component of gross loans and receivables, amounting to €88,430.6 million at 31 December 2016, representing close to 60% of total gross loans and receivables.

			Change (%)	Ex TSB	Ex TSB	Change (%)

The evolution of problematic assets has shown improvement throughout 2016. Quarter-on-quarter changes in these assets ex-TSB (non-performing assets plus real estate assets not covered by the Asset Protection Scheme) were as follows:

	2016				2015			
	1Q	2Q	ЗQ	4Q	1Q	2Q	ЗQ	4Q
Ordinary net inflows	(457)	(969)	(333)	(474)	(802)	(731)	(540)	(544)
Change in real estate assets	(41)	71	(158)	(73)	211	167	1	7
Ordinary net inflows + properties	(498)	(898)	(491)	(547)	(591)	(564)	(539)	(537)
Write-offs	213	70	144	101	245	170	300	234
QoQ ordinary change in balance of non-performing and real estate assets	(711)	(968)	(635)	(648)	(836)	(734)	(839)	(771)

The reduction in non-performing assets was reflected in a loan loss ratio of 6.14% at the end of 2016, compared with 7.79% at the end of 2015 – a fall of 165 basis points. The NPL coverage ratio at 31 December 2016 was 51.6%, compared with 53.6% one year earlier.

During 2016, customer funds performed well and overall increased by 3.1% year-on-year (4.6% excluding TSB), mainly due to the steady growth of off-balance sheet funds, in particular in terms of assets managed and traded in mutual funds and insurance products sold by the Group.

At 2016 year-end, on-balance sheet customer funds totalled  $\leq 133,456.6$  million ( $\leq 99,123.0$  million excluding TSB), compared with  $\leq 131,489.2$  million at 2015 year-end ( $\leq 96,227.0$  million excluding TSB). The balances of sight accounts amounted to  $\leq 92,010.6$  million ( $\leq 62,624.0$  million excluding TSB), representing a year-on-year change of 8.8% (16.3% excluding TSB) and customer deposits with agreed maturity amounted to  $\leq 40,154.0$  million ( $\leq 35,206.9$  million excluding TSB), 13.4% lower than in the previous year (15.8% lower excluding TSB).

Total off-balance sheet customer funds amounted to  $\notin$ 40,605.9 million, an 8.6% increase compared with the end of the previous year. Within this chapter, particularly worthy of note was the uninterrupted growth in assets in Undertakings for Collective Investment in Transferable Securities (UCITS), which at 31 December 2016, stood at  $\notin$ 22,594.2 million, a 5.4% increase compared to 2015 year-end, and insurance products sold by the Group, which amounted to  $\notin$ 10,243.4 million, representing a 34.0% increase compared to 2015 year-end.

Issued debt securities amounted to €24,987.5 million at 2016 year-end, compared with €26,406.6 million at 31 December 2015.

Total funds under management at 31 December 2016 amounted to €201,588.8 million (€162,548.9 million excluding TSB), compared with €200,355.1 million at 31 December 2015 (€160,605.2 million excluding TSB), representing an increase during 2016 of 0.6% (1.2% excluding TSB).

Earnings per share (euro)	0.13	0.13		0.09	0.11	(110)

Net interest income in 2016 amounted to  $\notin$ 3,837.8 million, a 19.8% increase compared to the net interest income obtained in the previous year. Excluding TSB, net interest income amounted to  $\notin$ 2,786.9 million at 2016 year-end, a 4.6% increase compared with the previous year.

In cumulative average terms, the net interest margin as a percentage of total assets stood at 1.86% (1.72% in 2015). The increase in average returns on average total assets was due to many factors, mainly the increase in the customer spread (due mainly to the reduced cost of funding of customer deposits), cheaper capital market costs, the reduction of problematic assets and the improved profitability of the completed acquisitions.

Financial income or costs deriving from the application of negative interest rates are recorded in line with the nature of the associated asset or liability. The credit institutions item under liabilities includes negative interest from balances of liability headings of credit institutions, the most significant of which is income from TLTRO II.

Dividends charged and profit from companies consolidated under the equity method together amounted to €84.6 million, compared with €51.7 million in 2015. These revenues mainly include income from the insurance and pensions business.

Income from net fees and commissions amounted to  $\leq 1,148.6$  million ( $\leq 1,022.8$  million excluding TSB), increasing by 14.5% year-on-year (10.6% excluding TSB). This increase was mainly due to the positive performance of fees from insurance and pension sales, which increased by 48.9% compared with the previous year.

Net trading income amounted to €609.7 million (€556.2 million excluding TSB), including, amongst others, €382.5 million in gains on the sale of available-for-sale fixed-income financial assets, €109.5 million from the sale of 100% of Visa Europe shares and €-8.3 million from the sale of BCP shares. At the end of 2015, total net trading income amounted to €1,208.2 million (€1,207.1 million excluding TSB), including €1,045.5 million in gains on the sale of available-for-sale fixed-income financial assets. In 2015, the high level of trading income deriving from the management of the ALCO portfolio up to June 2015 is also noteworthy, as it allowed the levels of coverage to be strengthened.

Net income from exchange differences amounted to €16.9 million, compared with €137.9 million in 2015.

Other operating income and expenses amounted to  $\notin$ -226.9 million ( $\notin$ -209.1 million excluding TSB), compared with  $\notin$ -125.6 million in the first half of 2015 ( $\notin$ -123.4 million excluding TSB). Within this heading, particularly noteworthy were contributions to the Deposit Guarantee Fund of  $\notin$ -87.3 million, contributions to the national resolution fund of  $\notin$ -47.7 million and TSB's contribution to the Financial Services Compensation Scheme of  $\notin$ -7.6 million, the contribution of tax on deposits in credit institutions amounting to  $\notin$ -27.6 million and  $\notin$ -57.0 million in financial contributions for converting deferred tax assets into credit receivable by the Spanish Tax Authority.

Operating expenses (staff and general) in 2016 amounted to  $\notin$ 2,663.3 million ( $\notin$ 1,816.7 million excluding TSB), of which  $\notin$ 87.1 million were non-recurring items (consisting essentially of redundancy payments to employees); in 2015, operating expenses amounted to  $\notin$ 2,286.5 million ( $\notin$ 1,807.7 million excluding TSB) and included  $\notin$ 63.8 million in non-recurring expenses.

The increase in gross income in 2016, as well as operating expenses containment policies, led to an improvement in the cost-to-income ratio, which, at the end of 2016 stood at 48.68% (42.66% excluding TSB), compared to 48.96% (44.59% excluding TSB) in 2015. For the purpose of calculating this cost-to-income ratio, recurring trading income of €400 million per year has been considered for 2015.

As a result of the foregoing, pre-provisions income at 2016 year-end amounted to  $\notin$ 2,411.5 million ( $\notin$ 2,118.4 million excluding TSB), compared with  $\notin$ 2,863.0 million in 2015 ( $\notin$ 2,763.8 million excluding TSB).

Allowances for loan losses and other impairments (primarily real estate and financial assets) amounted to  $\notin$ 1,427.1 million, compared with  $\notin$ 2,333.2 million in 2015. Allowances during 2016 of  $\notin$ 92.3 million for the impaired shareholding in BCP are particularly noteworthy.

Capital gains on asset disposals amounted to €35.1 million and mainly included gross gains of €52 million on the sale of the stake held in Dexia Sabadell. In 2015, gains on sales of assets amounted to €-17.0 million.

Profit before tax increased by 36.9% (17.6% excluding TSB), compared with that obtained in 2015.

After deducting income tax and non-controlling interests, net profit attributed to the Group amounted to  $\notin$ 710.4 million at the end of 2016, a 0.3% increase compared with the previous year. Excluding TSB, net profit attributable to the Group amounted to  $\notin$ 531.1 million at 2016 year-end, a 9.4% decrease compared to the same period in 2015.

#### 2.4. Business review

The key financial figures associated with the Group's largest business units are shown hereafter, in line with the segment reporting described in Note 42 to these consolidated annual accounts.

#### Banking business Spain

Within banking business in Spain, the most significant businesses should be noted, on which information is shown regarding changes in income and key figures.

#### Commercial Banking

The Group's largest business line is Retail and Business Banking, which focuses its activity on providing a range of financial products and services for large and medium-sized enterprises, SMEs and retailers, individuals (including private banking, personal banking and mass market customers), non-residents and professional groups, with a degree of specialisation that provides customers with tailored care depending on their requirements, whether from experts throughout its multi-brand branch network or via other channels intended to support the customer relationship and give access to remote banking services.

In terms of individuals, in 2016 the Group has worked towards maintaining the high rate of acquisition of new customers of previous years and towards becoming the primary bank for all of its customers, building long-term relationships and offering a high service quality. During 2016, a new model has been implemented involving Hub & Spoke branches, and Remote Management has been deployed to Retail Banking, with a view to addressing our customers' needs remotely.

In addition, new services have been implemented to improve customers' daily transactions and operations, such introducing our new Digital Signature for all individual customers, as well as mobile payments in retailers (Sabadell Wallet) and between individuals (Bizum).

In corporates, during 2016 the bank has consolidated its new relationship model based on its Companies Commitment Plan. With this Plan, the bank places customers at the centre of the relationship, and commits, in writing and together with the customer, to a series of aspects of this relationship that are in the common interest of both parties.

This relationship model has been positively valued by the bank's customers, as reflected in surveys that have been conducted, and is the main pillar for turning the bank into the primary financial supplier of its customers.

In 2016, net interest income attributed to Retail and Business Banking stood at  $\leq 2,212.3$  million, and income before tax stood at  $\leq 1,133.4$  million. The ROE ratio stood at 15.7% and the cost-to-income ratio at 48.1%. The bank's turnover amounted to  $\leq 76,928$  million in loans and receivables and  $\leq 95,726$  million in funds under management.

## Corporate Banking

Thousand ouro

Corporate Banking offers financial solutions and advisory services to large enterprises and financial institutions, both national and international. Its activities encompass corporate banking, structured finance, and Trade Finance & IFI.

	2016	2015	Change (%) year-on-year

2016 has been a year in which Global Corporate Banking teams have deployed a coordinated strategy across geographies, allowing Banco Sabadell to make significant progress towards its consolidation as "the best experience in Corporate Banking for its customers".

The higher investment appetite of customers outside of Spain during 2016 (due to the higher rates of return that they receive on their assets), together with our capacity outside of Spain and our coordination between teams, allows us to continue to be there for our corporate customers in all geographies in which they intend to grow.

In 2016, net interest income attributed to Corporate Banking stood at €162.4 million, and income before tax stood at €89.5 million. The ROE ratio stood at 5.2% and the cost-to-income ratio at 17.5%.

#### Markets and Private Banking

Markets and Private Banking offers and designs products and services with a high added-value with a view to achieving a high rate of return for the customer, increasing and diversifying the customer base and ensuring the consistency of investment processes through a rigorous analysis and with high-quality management, while taking the customer relationship model towards a multichannel level.

In 2016, attributed gross income amounted to  $\notin$ 237 million, and profit before tax was  $\notin$ 124.4 million. The ROE ratio stood at 42.3% and the cost-to-income ratio at 47%. The volume of customer funds under management stands at  $\notin$ 21,438 million.

SabadellUrquijo Private Banking has continued to contribute value through personalised advisory services and the offering of specific Private Banking products, such as investment funds, discretionary management portfolios or SICAVs, which have allowed SabadellUrquijo to achieve the highest rankings in Private Banking entities.

At the end of the year, Sabadell Asset Management had assets under management in investment funds under management of Spanish law which amounted to  $\leq 14,122.1$  million, 7.9% more than at the end of the previous year, and more than the sector increase of 7.0%. With this volume of assets under management, the Group has achieved a market share of 6% in assets managed by Spanish investment funds.

For Treasury and Capital Markets, 2016 has been a year of consolidation of activities, both traditional activities and those forming part of the development of the Triple Plan.

Within traditional activities and in a low interest rate environment, straight bonds are becoming more popular and have been consolidated as an attractive investment alternative. Even so, structured investment continues to be an interesting option when pursuing higher returns.

As part of the objective of developing and strengthening Capital Markets activity, the bank continues identifying potential operations and receiving mandates, both from issuers and from institutional customers who channel their financing and investment needs through us.

Lastly, in the current market environment in which European profitability is at an all-time low and excess liquidity at an all-time high, together with the bank's larger international footprint, has resulted in trading activity linked to the world of managing currency interest rates with different interest rate spreads continuing to gain in prominence in terms of total trading.

Securities Trading and Custody during this year has become more prominent in transactions with issuers, acting as an agent bank for different transactions, as brokers in liquidity contracts and in the execution of treasury portfolios, amongst others, both in terms of custody and brokerage.

This year, Banco Sabadell has managed to maintain its leadership position, allowing it to close the year as one of the top three market entities in terms of trading volume, with an 11.80% share, behind only Morgan Stanley and BBVA (with shares of 12.99% and 12.52%, respectively).

#### Banking business United Kingdom

En miles de euros

Banking business in the United Kingdom corresponds to TSB Banking Group PLC and 6 months of results. The TSB franchise includes retail business conducted in the United Kingdom, which includes current and savings accounts, personal loans, credit cards and mortgages.

	2016	2015	Change (%) year-on-year

(\*) Applying an exchange rate in 2016 of GBP 0.8562 to the balance sheet and GBP 0.8166 to the income statement (year average).

Applying an exchange rate in 2015 of GBP 0.7340 to the balance sheet and GBP 0.7201 to the income statement (average of last six months).

2015 only includes 6 months of results. For ROE, considering own funds.

Banking business United Kingdom includes TSB Banking Group PLC and 6 months of results for 2015. TSB is comprised of the following businesses:

- Retail business conducted in the United Kingdom, which includes current and savings accounts, personal loans, cards and mortgages, all under the TSB franchise.
- The "mortgage premium" which is a separate set of mortgages allocated to TSB as part of the restructuring of Lloyds.
- Ex-UKAR assets, which are comprised of a set of mortgages that were managed by the British government and which were purchased from Cerberus during the acquisition process effective from 8 December 2015.

Sources of funding are mainly the result of an increase in customer deposits and the success in their diversification. These funds are mainly used to increase the lending portfolio, following a successful launch of a mortgage brokering platform and the acquisition of ex-UKAR mortgages, as explained previously.

In 2016, funds have increased significantly thanks to the success of the "Classic Plus" account, which has allowed TSB to reach a share of 6.4% in terms of accounts opened in the UK during 2016.

This increase in funds has also helped to boost customer investment, supporting TSB's strategy and reflecting the success of TSB's mortgage brokering service.

The business of Sabadell Americas is comprised of various business units, three banking institutions, a stock market and investment broker, investees and representative offices, which together manage the financing business of corporate banking, retail and business banking and private banking. Furthermore, the bank provides services to its customers from operating centres, in coordination with the bank's representative offices in Colombia, Peru and Dominican Republic.

2016 was an important year for the consolidation of current business lines and allowed initiatives started in 2015 to be further developed, which in turn led to an increase in turnover.

In December, Sabadell International Branch (SIB) acquired a portfolio of close to USD 800 million in turnover from Itau Private Banking, thereby strengthening Sabadell's position as a reference institution in private banking for customers in Latin America. This acquisition marks the eighth corporate operation in the region in less than 10 years.

In terms of corporate banking, SIB continued to grow in new markets, with a growth totalling 65% in investments together with representative offices opened in Peru and Colombia in 2015.

In the US, through Sabadell United Bank (SUB), the bank achieved a turnover of USD 9.2 billion. Furthermore, its private banking and asset management division, Sabadell Bank and Trust (SB&T), emerged as the best bank for asset management in South Florida, according to the "Daily Business Review".

In Mexico, through Sabadell Capital, the bank managed financial corporate banking and structured finance operations with a significant increase in investment of USD 414 million, achieving USD 26 million in profit before tax. Additionally, and in line with the strategy for expansion in Mexico, at the end of 2015 a banking licence was obtained, allowing Banco Sabadell to be set up in this country. The bank began operating in January 2016, initially focusing on the provision of financial services relating to business banking. Less than a year since it began operating, the bank has already achieved a turnover of USD 313 million between loans and deposits.

## **Real Estate Asset Transformation**

During the year, further progress has been made in the development and implementation of improvements in the asset transformation strategy established in previous years. The main lines of approach in this strategy are based on the following management principles:

In 2016, for the first time the bank achieved its milestone of reducing the total volume of properties in respect of the figures at the beginning of the year, showing that real estate market trends continue to improve at a rate which will continue to be positive in 2017. In terms of actions for the recovery of defaulted loans, it is particularly important to note that during 2016 Banco Sabadell has continued to pro-actively manage defaults on mortgage loans taken out by customers for their usual residence, seeking solutions to these situations which avoid having to resort to legal proceedings and without any forceful evictions. As regards Banco Sabadell's real estate services, activity has continued to be extremely dynamic during 2016. Solvia is one of the main real estate servicing platforms, with a comprehensive offering of real estate services (from development and asset management through to sale, mainly to retail customers).

In terms of business development, the company has continued to diversify its customer portfolio. This year's incorporation of the real estate company Neinor, for which Solvia provides sale services, is particularly noteworthy. The portfolio of services provided to SAREB (the Spanish company for the management of assets proceeding from the restructuring of the banking system) has been extended, incorporating real estate development activities. Solvia also performs real estate advisory services, making use of its market expertise, for international funds acquiring portfolios in Spain.

A key milestone in terms of business development in 2016 was the decision to provide brokerage services (sale and rental) for individuals and corporates. For this purpose, Solvia is strengthening the skills of its teams and is focusing particularly on extending its own network of agents and consultants. With these purposes in mind, during the year Solvia has opened 11 offices on the high street and has started to franchise out its commercial network, and now has additional points of sale in its franchised network. Assets of individuals and corporates for which Solvia acts as broker have already been included in the available properties offering on solvia.es. The company continues to focus on developing its marketing channels, and has continued to be a leader in terms of brand awareness in 2016.

## 3 - The environment

### Environmental sustainability

We care about the future and about sustainability. This is why Banco Sabadell has an environmental policy in place, is a signatory of the main international covenants on the environment and promotes a commitment to the environment globally.

## Environmental policy

- Minimising the possible impact on the environment derived from processes, facilities and services.
- Managing environmental risks and opportunities inherent to the business in a suitable way.
- Encouraging all employees of the Group to be committed to environmental protection.

#### Global covenants and partnerships

- A signatory of the United Nations Global Compact: in taking this step we are committing ourselves to adopting a preventive approach to environmental protection, promoting initiatives to foster environmental responsibility and supporting the development of technologies that do not harm the environment.
- A signatory of the Carbon Disclosure Project (CDP) and CDP Water Disclosure: a commitment to actively combat climate change and publish an annual inventory of corporate emissions.
- A signatory of the Equator Principles: inclusion of environmental and social governance (ESG) in the funding of large-scale projects.
- A signatory of the United Nations Principles for Responsible Investment in the "investment manager" category: inclusion of environmental, social and good governance criteria in investment policies and practices.
- A collaborating partner of the Spanish Association of Renewable Energy Producers and a member of the Spanish Wind Energy Association.
- 6 corporate offices certified to ISO 14001 standards. Our environmental management system has been adapted for the rest of the Group.
- Certified to Gold level under LEED New Construction for sustainable buildings: certification was obtained for the service area of the Group's main corporate headquarters in Sant Cugat del Vallés.
- A member of the European Commission's GreenBuilding Programme: Banco Sabadell is a partner in the European GreenBuilding Programme for the sustainable construction of the Group's logistics centre and general archive in Polinyà.

All departments of the organisation have the financial resources they need to meet Banco Sabadell's aims and commitments on the environment. Due to the structure of the Group and the nature of its business, these funds are not recognised under a specific item that can provide an overview of environment-related costs and investment.

## Key environmental action areas

### Renewable energy – finance and investment

Banco Sabadell promotes the development of a sustainable energy model through direct investment and as a provider of finance for renewable energy projects.

Banco Sabadell provides finance to companies for renewable energy generation projects, such as wind energy, photovoltaic power, thermal solar energy, biomass or biofuel projects, in addition to advisory and brokerage services for this type of energy projects. Banco Sabadell also makes direct investments in the equity capital of renewable energy generation projects. Most of this business is carried out through Sinia Renovables, a wholly-owned subsidiary.

### The Equator Principles

Banco Sabadell adopted the Equator Principles in September 2011. Based on the policies, standards and guidelines of the International Finance Corporation (IFC), the Principles apply to structured finance projects and corporate loans.

Since then, the entity has applied the Equator Principles to all of its new structured finance projects valued at an amount greater than, or equal to, USD 10 million and corporate loans from USD 100 million. The projects are classed as A, B or C following the standard developed by the International Finance Corporation (IFC) and in all class A or B projects a social and environmental assessment is carried out and reviewed by an independent expert.

Banco Sabadell publishes the details of each of its projects associated with the Equator Principles in its annual report, and they can also be consulted through the bank's website.

#### Environmental management and climate change management system

The Environment Committee is charged with overseeing compliance with Group environmental policy and reviewing Group performance in environmental matters. The entity has an environmental management system which was set up in 2006 according to the ISO 14001:2004 standard. Currently 16.05% of the Group's employees in Spain work in one of the six office buildings that have been certified to that standard. The environmental management system has been adapted for use at all other Group work centres in Spain.

Year after year Banco Sabadell works to improve the eco-efficiency of its facilities and reduce the environmental impacts of the services it provides to customers.

Some of the measures the bank has taken to reduce consumption and emissions are as follows:

- Inventory of CO2 emissions: In 2009 the bank compiled an independently verified inventory of corporate CO2 emissions. We are continuing to apply our target reduction of 3% for the 2015-2020 period of scope 1 and 2 emissions, taking 2014 as a base. In 2016, emissions have been reduced by 94.77%, mainly by purchasing electrical power generated from renewable sources.
- Electrical power consumption; overall consumption of electrical power in Spain in 2016 was 89,808 MWh from 97,575 MWh at the end of 2015. It should be noted that Banco Sabadell continues to contract renewable energy sources through Nexus Renovables, which has provided 99.84% of the total electricity provided to the Group this year.
- The majority of Group branches are equipped with centralised lighting and climate control systems. Lighting systems fitted with LED lamps and presence detectors have been installed in some areas of the corporate centres.
- Widespread use of energy-efficient light fixtures and billboard lighting systems fitted with daylight switching systems.

- Energy recovery climate control systems are installed in corporate centres and larger branches.
- Branches use Thin Client lightweight computers that consume 90% less energy than conventional PCs.
- Paper consumption: reduce, reuse and recycle. Paper consumption by the Group in Spain in 2016 was 1,062 tonnes, a 27.72% reduction from the 1,469 tonnes in 2015. At the same time, the main actions taken to reduce paper consumption were as follows:
  - Banking services are now available to customers 24 hours a day via remote access channels, ATMs, telephone banking, email or social media. 100% of correspondence with customers was sent electronically.
  - Branches are equipped with digital tablets for customers' signatures. In 2016 this made it
    possible for 29 million printed forms to be eliminated.
  - Conventional paper is chlorine-free, certified by the FSC and produced to ISO 9001 and ISO 14001 standards; all of the Group's printers are configured for duplex printing by default.
- Water usage: The Group's water consumption in Spain is limited to sanitary uses and to some watering of gardens. With regard to waste water management, all our facilities and offices are connected to the public sewage network. Toilet cisterns and taps are fitted with water-saving mechanisms. The main Group headquarters have a cistern for collecting rainwater and greywater for watering plants. Landscaped areas have been planted with autochthonous drought-resistant plants.
- Waste: in all Group premises, used paper is treated as confidential waste for shredding and 100% is
  recycled through authorised waste managers. All corporate centres have facilities for the separation
  and collection of packaging, organic matter and batteries. Banco Sabadell works with Ricoh (only
  branches as banking printers are available) and the HP Planet Partners programme to manage the
  collection and reuse of toner cartridges and disposes of computer waste through authorised waste
  managers. There are specific oversight mechanisms for managing waste at branches that are in the
  process of closing or being merged.

### Environmental training and awareness

All Group employees have access to an online training course the completion of which is mandatory for staff at certified corporate centres.

Banco Sabadell also keeps all its suppliers informed of the Group's environmental policy and integrates environmental and social responsibility into its supply chain in a number of ways. In the Group-level procurement processes, tenders or offers from suppliers with ISO 9001, ISO 14001/EMAS or EFQM certifications are looked on favourably. Consideration is given to the environmental qualities (recycled, ecological, good for the environment, etc.) of the products offered. Banco Sabadell's basic contract with suppliers includes specific clauses on compliance with environmental criteria, human rights and the Ten Principles of the United Nations Global Compact, as well as acceptance of the Supplier Code of Conduct. In particular, environmental requirements are included in specifications for products and services that have significant environmental impacts.

## **4.- HUMAN RESOURCES**

Human Resources aims to support the transformation of the organisation through a people agenda that is an integral part of its day-to-day business operations and its growth. Its key objective is to maximise the valuecreating potential of Banco Sabadell's workforce by developing their talent, managing their expectations and fully leveraging their capabilities.

Throughout the Triple Plan, talent management and human capital have been crucial in order to support the main pillars of the strategic plan.

The Triple plan included drivers of organisational change and development as well as a wide-ranging and completely updated view of the Human Resources function.

In the area of organisational change and development, three strategic priorities have been identified: comprehensive talent management (strengthening leadership and fostering a culture in which talent is planned for and nurtured) to meet the needs generated by growth; raising the bar on employee performance (a universal and updated model that allows people's performance to be actively managed); and involving and engaging all employees in the Group's development.

#### Key human resources data

. . . . .

	2016	2015
Average equivalent workforce	26,022	21,879
Spanish workforce at year-end	16,771	16,869

Management staff	491	154	645
Total	11,440	14,505	25,945

Data calculated based on Group workforce.

#### Human resources management - policies and principles

Human Resources policy is grounded in respect for human dignity, fair and competitive remuneration, transparent and accurate information, and lasting cooperation.

#### Recruitment policy

In line with its human resources policy, Banco Sabadell has a staff recruitment process which ensures that objective criteria based on professionalism and suitability are applied in finding the right person for each job and career path. The Group seeks to ensure optimal professional development for its employees by encouraging them to excel and rewarding hard work. This mutual commitment is set out in the Banco Sabadell Group Code of Conduct.

In 2016, work has been made on a number of actions and projects to strengthen and improve its procedures for attracting and recruiting talent.

Attracting, selecting and recruiting staff are a part of this new environment: a higher intake of new employees, new job profiles and geographic dispersion are making it necessary to redesign and update the procedures, skills, technologies and capabilities used to attract the best candidates and provide them with a professionally rewarding experience.

To meet this need, make the internal recruitment service more dynamic, offer opportunities for career development and to favour internal movements of employees within the Group, the following measures have been taken:

- Increase in the flexibility of internal recruitment (and transfer) regulations, in order to attract more talent internally.
- Approval of a procedure to actively search for and recruit internal employees.
- Internationally, the pillars of an international internal recruitment policy have been described and shared, with a view to standardising and enhancing the efficiency of transfers of employees between the different regions in which the Group operates.

Between January and December 2016, 184 vacancies were filled internally and 77 externally.

In parallel, work has continued on the full digitalisation of the recruitment procedure, which has now been completed. Candidates are attracted, identified and assessed through a single technology platform. This change has allowed a more objective model to be defined and implemented, and has increased the overall quality and robustness of the process.

The bank is still working on the consolidation of a group of employees to selectively nurture future expansion, as well as the incorporation of international experience in management careers.

For this reason, a service unit has been created intended to design and manage programmes for attracting young talents with potential and develop this programme to work as a system that will expand together with the bank.

- Internship Programme
- Young Talents
- Talent Graduate Programme.

This year, 140 interns, 30 Young Talents and 40 Graduates have been recruited.

Great efforts have also been made to be present in the main forums and build closer, stronger relationships with universities and business schools considered to be of vital importance for Banco Sabadell. The bank has taken part in different activities including networking sessions, stands and presentations to students: AFI, BGSE, CUNEF, Deusto, ESADE, JOBarcelona, UEM, UPC, and IDEC amongst others.

These actions have also led to an improvement in external reputation, including the achievement, for the first time, of a place in the Mercopersonas Top 20 (ranked number 17), the Spanish corporate reputation monitor, which measures the appeal of institutions as employers.

## Equality, work-life balance and integration

Banco Sabadell guarantees gender equality and equal opportunities in all areas of its activity affecting its workers: recruitment, training, promotions and career development, salaries, work-life balance, etc. These principles are set out in the Banco Sabadell Group Equality Plan, the Human Resources policy and code of conduct.

#### Gender equality

With the firm commitment of Senior Management, and in line with the objective set forth in the Equality Plan, which was signed by representatives of employees in 2010 (renewed in June 2016), Banco Sabadell has increased the presence of women in management positions by 2% during 2016.

The new equality plan, in the same way as its previous version, aims to prevent all forms of discrimination in the work-place between women and men in the company, and sets out new lines of approach, with perfected systems to monitor performance and evaluate objectives in the areas of training, promotions, career development, salaries, work/life balance, gender violence and sexual abuse.

	2016	2015
% of promotions given to women	53.77%	56.45%
% of women in management positions	23.88%	21.85%

Data calculated based on Group workforce.

#### Diversity and integration

Banco Sabadell promotes all types of employee diversity and encourages the integration of all of its partners in the workplace with non-discriminatory career development and recruitment processes.

The Group sets out actions relating to the suitability of positions in cases of functional diversity that require such actions, in line with the special sensitivity procedures of the occupational medicine service. The bank also assists employees with paperwork and procedures in their dealings with municipal, regional and national governments, thus helping to improve employees' well-being outside the strictly professional sphere. In compliance with Spain's General Disability Act (LGD, for its acronym in Spanish), the bank pursues other measures such as buying services and supplies from special employment centres.

In 2016, the Group had 263 employees with some form of disability (254 at the end of 2015).

Functional diversity is not the only diversity that is managed in a distinctive way by Banco Sabadell. Policies aimed at making the most of talent across generations have become particularly important during 2016, due to the evolution of the age pyramid in the Group.

Banco Sabadell has conducted a comprehensive study of the generational situation of its workforce, identifying the complexity of experiences, skills, abilities and training in each generation represented by that workforce and devising proposals for improvement that take into account their main interests, needs, expectations and concerns.

### Work-life balance

Employees have at their disposal a series of social benefits agreed with Banco Sabadell and union representatives in agreements on measures aimed at achieving a healthy work/life balance. The full workforce has been notified of these benefits and they can be consulted on the employee portal on the Intranet, therefore they are widely known to the workers, who have been requesting and enjoying these benefits for a long time.

Benefits include time off from work, paid or unpaid (e.g. to nurse an infant); unpaid leave (for maternity or to care for a relative); leave in special circumstances (for studies, personal reasons, inter-country adoption); extension of paternity leave; and flexitime arrangements.

With a view to improving the work/life balance of Banco Sabadell partners, in recent months, a pilot teleworking test has been implemented, and the aim is to deploy this remote working option throughout the Corporate Centre.

Banco Sabadell also offers a wide range of measures aimed at improving the work/life balance of its workforce, by offering an option to contract services and purchase items through the employee portal, which gives employees an opportunity to save both money and time, as they receive the items in their workplace, saving transportation expenses and avoiding having to run errands outside of their working hours.

In the corporate centres in Sant Cugat del Vallès and Madrid, various services are also put at the disposal of employees which allow them to save time and transportation expenses, including a gymnasium, dry-cleaning services, a parapharmacy (which sells typical pharmacy items but not prescription drugs), a travel agency, a hair salon, a banking branch, etc., thereby making it easier for employees to do certain activities.

## Compensation policy

Banco Sabadell's compensation policy is based on the principles of internal fairness, external competitiveness, transparency, differentiation, flexibility, simplicity, confidentiality and communication, as prescribed by the Group's human resources policy.

The compensation policy is based on the degree of responsibility attaching to the position and on each employee's professional development. This determines Group practices with regard to increases in both fixed and variable remuneration. In total, 88.47% of the workforce in Spain had salaries which included variable remuneration in 2016 (89.7% in 2015).

Other types of benefits are available to employees, including interest-free loans and grants to help with training or children's schooling.

### Workplace hazards

Banco Sabadell has a policy of constantly striving to improve employees' health and working conditions.

As required by law, the bank has a health and safety plan setting out policy measures in this area. Each year it publishes a report on health and safety initiatives undertaken by the company, which is available on the employee portal and the corporate website.

An initial risk assessment is performed on each new workplace and also on workplaces that have undergone refurbishment or alterations. A follow-up assessment is performed at a later date to evaluate individual workstations and common areas, facilities and aspects such as temperature, lighting, etc.

All Banco Sabadell staff and new employees receive information on workplace hazard prevention and are required to take an online course in health and safety at work. The training is supplemented by publications, such as ergonomics factsheets and equipment manuals, related to hazards which are specific to the bank's activities.

#### Employee development

#### New learning model

In 2016, given the challenges facing the organisation and the market, the training department has sought to promote the implementation of the new learning model of Banco Sabadell with the launch of the Sabadell Campus and its different Schools and Spaces. The pillars of Banco Sabadell's training model play out in this project, and are based on:

Innovation, with a flexible digital training model based on learning through experience and with a high emotional impact. To this end, the most innovative methodologies available at an international level have been analysed, to create new training programmes and redesign existing ones.

Personalisation of training, offering training that can be adapted to each pivotal moment in people's lives and to their individual way of learning, and which can help to achieve personal and professional challenges that they set themselves.

Alignment of business and training, with the latter acting as a driver for change and a key lever for the business. In order to construct each training programme and solution, we have worked with the different business areas, identifying which indicators they would like to improve and what impact they expect to achieve with the training.

Efficiency, a model which seeks efficiency both in economic terms and in terms of learning, to pro-actively meet requirements with a higher quality and greater transfer of knowledge.

	2016	2015
Employees who received training (%)	98%	98%
Investment in training per employee (euro)	371.8	257.1

Data for Spain.

#### Launch of the Digital Space

Sabadell Campus has put a Digital Space at the disposal of all its employees for them to develop their digital skills, with which it aims to help the digital transformation of all Banco Sabadell employees. During 2016, two training activities have been launched, which have been extremely successful and in which many employees have taken part: over 6,000 people have already taken part in *Digitalizate con Google* (Go Digital with Google) and *Digitalizate con LinkedIn* (Go Digital with LinkedIn).

#### Launch of the Business School

The launch of the Business School means that available training programmes are fully focused on challenges facing the branch network.

Specific online content has been created to help overcome cross-cutting business challenges and new inperson business skills workshops have been designed. There is a far more comprehensive, employee-oriented offering which can be adapted to the needs of each professional.

Furthermore, work has begun on redesigning the old training activities that were in place for each function, transforming them into a programme part of which employees attend in person, to welcome employees to their new position and recommending online and in-person training in line with their professional profile. This is a more modern programme focused on training in line with professional profiles, which allows each employee to tailor their training plans.

During 2016, this programme has already been implemented for the professional profiles of Branch Managers, Business Banking Directors and Relationship Managers, and we are still working on including more profiles in this programme next year.

#### Launch of the Management School and redesigning of MCP Programme

The new Management School has been launched with the objective of providing content to Banco Sabadell employees to enable them to develop skills with which to achieve their personal and professional objectives.

To this end, new online training formats have been included, such as videos, games, scenarios, etc., and programmes have been redesigned to include informal learning, networking, gamification and other innovative teaching methods, improving the impact of transformation in terms of both those taking part in the programme and the entity.

We have also launched a renewed MCP programme, which has been redesigned to allow more employees to make use of it, and to enable their final projects to have a greater impact within the organisation.

### Launch of the Technical-Financial School

Lastly, the new Technical-Financial School has been started up, which aims to improve the financial culture of the entity, offering specialised training methods and placing an attractive offering of content and learning methods at the disposal of all employees.

As part of the Technical-Financial School, a new Risk Management Programme has been implemented, run by UPF (Pompeu Fabra University in Barcelona), for the bank's risk analysts.

Additionally, in the Technical-Financial School, all employees can access exclusive financial content created by professors from the Open University of Catalonia (Universitat Oberta de Catalunya), which has been adapted to the practical challenges faced by Banco Sabadell employees.

#### Launch of the Languages Space

As part of the ongoing objective to improve the level of foreign languages spoken and written by employees within the entity, a new Languages Space has been created in Sabadell Campus. This is a space in which employees can find information about the language learning options offered by the bank in line with their specific professional profile and requirements.

#### New Internal Trainers project

One of the key pillars of Banco Sabadell's new training model is its internal trainers, who enable the management of internal knowledge and talent and the model allows training to be available to all regions as and when it is required.

We understand the importance of internal trainers, and have therefore launched a campaign to recruit new internal trainers to form part of our new training plan. In parallel, a new training plan is being designed for trainers for use as a talent detection and development tool.

#### Leadership management

The new Strategic Talent Division has been consolidated, and its main challenge in 2016 has been implementing a new talent management model for management staff and staff considered for management positions. To this end, the HR information has been integrated into the model, and structured interviews have been carried out designed to determine employees' potential, adding new, highly reliable psychometric tools to the assessment. Based on this information, "people's committee" meetings have been held in each Division in

order to identify and develop talent to meet the current and future needs of the bank. People's committee meetings have taken place in all divisions, 19 in total, between a total of 285 management staff and staff considered for management positions.

After holding these committee meetings, a feedback process was initiated and a development plan implemented for all employees involved in these meetings. The purpose was to build a culture of development in order to maximise future performance, under the guidance of their line managers and together with the Human Resources Business Partners (HRBP) to move forwards in identifying, developing and promoting talent.

In this context, the consolidation of the figure of the HRBP is notable under the leadership of the Strategic Talent Management Division. There are currently 10 employees who have taken on the new role of HRBP, and like the figure which already exists in the network through Regional Organisation and Resources Directors, their objective is three-fold: to be a strategic partner of the various divisions, to centralise activities relating to people and to pro-actively manage human capital.

We encourage our management staff to have a shared leadership vision and standard, and we favour the professional growth and development in line with the bank's culture, using personal change as a basis to facilitate changes at an organisational level. The programme has a synergic effect where it achieves the 'cascade' transfer of knowledge of the people forming part of the teams, as well as a warmer and more human attitude. These attitudes position our management staff as an example of quality and openness, both internally and in the external market.

One of the main outcomes of this exercise has been the continuation of the Corporate Management Programme, which is designed for new heads of department and corporate centre directors with subordinates working under them. The Programme is based on developing management and team-building skills, promoting joined-up management in corporate centres and improving familiarity with Human Resources policies as a way of managing professional development and promoting success-driven behaviours appropriate to each role. The sixth edition took place in 2016.

One of the organisation's main tools in managing people and focusing on results is the annual performance review and interview, where managers hold a mandatory one-to-one meeting with their direct reports, the goal being also to foster professional growth and build trust. This year, we have improved the validity and reliability (rigour in the assessment – greater level of distinction) of the process, which has allowed us to focus particularly on employees who can perform better, with whom specific plans for improvement have been established, managed together with their line managers.

#### HR Operations

The HR Operations division, which includes the Shared Services Centre and the Employee Assistance Office, has started a stage of consolidation to hone skills in service provision and enhance the efficiency of processes. Within this division, to strengthen the management teams, a Human Resources Middle Office has been created aimed at giving specialised support to HRBPs during their activities. The creation of the HR Middle Office is the culmination of a series of HR processes which will lead to a greater focus and efficiency in the management of people throughout all corporate divisions.

#### Communication, participation and the volunteer programme

#### Communication

Banco Sabadell has numerous channels of communication between the different levels of the organisation to enhance internal communication and involve employees in the bank's goals.

The "Banco Sabadell Idea" platform allows employees to propose improvements in any area of the organisation. The platform is also an excellent communication channel through which employees can make queries and share experiences on products and processes. The ideas with the most votes and those which add the greatest value to the entity are considered by the persons in charge of the processes concerned and by members of a Decision Committee, who together reach a decision on their implementation. The ideas with most votes also receive a cash prize.

## Participation

Banco Sabadell respects and guarantees employees' basic rights, including freedom of association and collective bargaining, enshrined in Spanish law. These principles are set out in its code of conduct and human resources policy.

Union representatives represent the entire workforce, not just union members; accordingly, labour agreements apply to all employees at the level at which the negotiation was conducted (industry, corporate group, company, etc.). All employees are given one month's notice of significant changes. Union elections are held every four years. Banco Sabadell's management meets periodically with the general secretaries of the various trade unions and the latter participate regularly in various committees of the organisation (National Health and Safety Committee, Equal Opportunities Committee, Training Committee and the Pension Plan Oversight Committee). Workplaces with more than 50 workers have a workers council. Workplaces with between 6 and 10 workers may elect a union representative.

In response to the results of the workplace environment survey conducted in 2015, between May and September 2016 23 Focus Groups have been held, in which over 400 employees have taken part, the main objectives of which were: to identify the main needs and priorities of the bank in terms of improving its workplace environment and analyse more quantitative information based on the GPTW survey. These Focus Groups have been held in all of the bank's divisions and regional branches, and give a view of employees' thoughts about their workplace environment and the current and future outlooks of the bank. Based on the conclusions reached, plans of action have been defined at a global level and by divisions / regional branches, which will help to consolidate the bank as an "Excellent Place in which to Work" and improve the experience of the bank's employees.

### Volunteer programme

In response to this line of approach, defined in the Corporate Social Responsibility Plan 2013, SabadellLife, a new internal portal, has been introduced, which incorporates all actions that involve our employees in terms of health, solidarity and sport.

The SabadellLife Portal publicises social action and corporate volunteer initiatives. The successes achieved year after year has led to a substantial increase in the number of volunteers and in the number of activities organised in 2016, many of which were proposed by the employees themselves.

Details of some of the most significant activities in 2016 are given below:

OxfamIntermon Trailwalker. 405 people representing Banco Sabadell took park in this year's Trailwalker, making Banco Sabadell the company with the largest number of employees taking part in Madrid, raising over €90,000 for water supply projects carried out by Oxfam in the Sahara region.

Together with Banc de Sang i Teixits, Banco Sabadell makes blood donations, where year after year the number of blood donations has increased significantly.

Success of the BSImparables campaign, which led to over €6,000 being raised for research into leukaemia by the Josep Carreras Foundation. Furthermore, 20 employees have registered with the Spanish registry of bone marrow donors (REDMO). This campaign saw high levels of employee involvement through social media (hasthag #BSImparables).

For the fourth consecutive year, 164 volunteers from the bank participated in workshops for students in their fourth (and final) year of compulsory secondary education as part of the Schools Financial Education Programme in Catalonia (EFEC). The cooperation agreement signed with Catalonia's regional government (Generalitat de Catalunya) and Instituto de Estudios Financieros covered 301 schools in Catalonia. Additionally, this year Banco Sabadell has taken part in the "Tus Finanzas, tu futuro" (Spanish Banking Association) programme, where 34 volunteers shared basic knowledge about finance with students in their second and third years of compulsory secondary education throughout Spain.

Through 'Sabadell en acción' (Sabadell in action), over €60,000 were raised for emergencies and charitable causes. 'Sabadell en acción' will soon be included under the item 'Actitud Solidaria' (Solidarity actions), which will expand the framework of our alliance with the startup Worldcoo.

This year, 580 letters were requested from the Magone Foundation, so that Banco Sabadell employees could become Wise Men and Women at Christmas for a day, sending a Christmas gift to children at risk of social exclusion.

COACH Foundation: a corporate volunteer initiative aimed at improving employability of young people at risk of social exclusion through coaching and mentoring. Twenty young people have benefited from the Programme this year, double last year's number.

Social Business Mentoring with the SHIP2B Foundation. 17 management staff of Banco Sabadell have taken part as mentors in the B-Ready programme to accelerate social start-ups.

The success of initiatives intended to provide healthcare tools to our employees should also be noted, in which over 1000 employees took part, particularly in initiatives concerning healthy eating and sport. In this context, the number of employees taking part in various races for women is also noteworthy, with over 140 employees signing up to take part.

## 5 – LIQUIDITY AND CAPITAL RESOURCES

## 5.1 Liquidity

The key aspects in the evolution of liquidity during the year at Group level have been as follows:

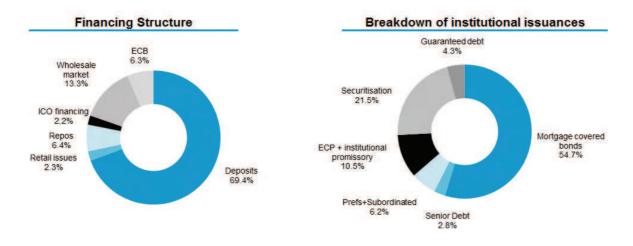

- The entity has continued to generate a liquidity gap in its commercial business, reducing total funding in wholesale markets and increasing its liquidity position.
- On-balance sheet customer funds increased by 1.5% compared to 2015 year-end.
- In 2016, the growing tendency of the generation of a gap between loans and deposits observed in recent years has continued. The Loan to Deposits (LtD) ratio of the Group at year-end stood at 105.1%.
- The level of funding in capital markets has been declining in recent years. Issues maturing during the year in capital markets amounted to €4,420 million. Banco Sabadell carried out issues under its Programmes totalling €7,658.5 million. Specifically, in March Banco Sabadell carried out two public issuances of covered bonds at eight and seven years in June and October 2016, totalling €1 billion, respectively; an extension of an existing covered bond issue by €100 million in March, three 8-year issuances of covered bonds totalling €850 million fully subscribed by the European Investment Bank (EIB); one issuance of 10-year subordinated bonds totalling €2,488 million and 11 issuances of structured notes totalling €220.6 million and with terms varying between 1 and 5 years. In the first half of 2016, TSB launched a securitisation operation on the market with a value in euros of €664 million.
- In 2016 the three agencies that assessed the credit quality of Banco Sabadell were Standard & Poor's, Moody's Investors Service and DBRS. In December, the credit rating agency Moody's Investors Service announced an upgrade of one notch in its rating of the bank's senior debt, which has been given an investment grade once more after four years. This rating upgrade reflects the improvement in Banco Sabadell's fundamentals, particularly in terms of risk. In November, the credit rating agency Standard & Poor's changed its rating outlook of Banco Sabadell from stable to positive, as it considered that the bank is reducing the risks on its balance sheet and is gradually strengthening its solvency in a more positive economic environment, and that it is consolidating its market position in Spain and diversifying its sources of income in terms of geography.
- Banco Sabadell took part in the ECB's four-year liquidity auction in 2016 (TLTRO2 or Targeted Long Term Refinancing Operations 2) totalling €10,000 million at year-end, whilst simultaneously redeeming €11,000 million in its possession corresponding to the TLTRO auctions at the end of 2014.
- The entity has maintained a liquidity buffer in the form of liquid assets to meet eventual liquidity needs.
- On 1 October 2015, the Liquidity Coverage Ratio (LCR) came into force, with a phase-in enforcement
  period up to 2019. In 2016, the regulatory minimum requirement was 70%. All of the entity's Liquidity
  Management Units (UGLs, for their acronym in Spanish) comfortably surpassed this minimum. At Group
  level, the bank's LCR has consistently been above 100% throughout the year. As regards the Net Stable
  Funding Ratio (NSFR), the implementation date of which has been set for January 2018, the entity has
  continued to maintain stable levels above 100%.

Key figures and basic liquidity ratios at the end of 2016 were:

€million			Ex TSB	Ex TSB
	2016	2015	2016	2015
Gross loans and advances to customers, excluding repos	150,087	152,697	115,640	116,635
Provisions for insolvencies and country-risk	(4,921)	(6,610)	(4,835)	(6,426)
Brokered loans	(4,900)	(6,069)	(4,900)	(6,069)
Adjusted net loans	140,266	140,018	105,905	104,140
On-balance sheet customer funds	133,457	131,489	99,123	96,227
Adjusted loans to deposits ratio (%)	105.1	106.5	106.8	108.2
The EUR/CRP exchange rate used for the balance sheet is 0.8562 at 31.12.16 and 0.7340 at 31.12.15				

The EUR/GBP exchange rate used for the balance sheet is 0.8562 at 31.12.16 and 0.7340 at 31.12.15

The Group's principal sources of funding at the end of 2016 are shown in the following figures according to the type of instrument and counterparty:

For further information regarding the Group's liquidity management, strategy and evolution, see Note 4 on Risks, under the Liquidity Risk section in the notes to the annual accounts.

## 5.2. Capital resources

Note 5, "*Own funds and capital management*" of the consolidated annual report of the Group, contains a detailed report of its capital management (regulatory framework, detailed data and capital activity).

The main figures related to capital management are shown below:

%/ €million		
	2016	2015
CET1	12.0	11.5
Tier I	12.0	11.5
Tier II	1.8	1.4
BIS ratio	13.8	12.9
Capital base	11,852	11,417
Minimum capital requirement	6,886	7,102
Risk weighted assets	86,070	88,769

Note 5 of the annual report explains the main changes compared with the previous year in terms of regulation, evolution of risk weighted assets (RWAs) and the main components of own funds.

In recent years, Banco Sabadell has been actively managing its capital, which is a crucial aspect for the entity's growth. In recent years, the bank has increased its capital base through issues classified as tier one capital, as shown in the table below:

		Amount	Impact on capital
February 2011	Debt-for-equity swap (equity through accelerated book building and buy-back of preference and subordinated stock)	411	+68 bp of core tier I
February 2012	Preference share swap for ordinary shares	785	+131 bp of core tier I
March 2012	Capital increase	903	+161 bp of core tier I
July 2012	Preference debt instruments and subordinated Banco CAM debt swap for shares	1,404	+186 bp of core tier I
September 2013	Accelerated bookbuilding and capital increase with rights	1,383	+178 bp of core tier I
October 2013	Issue of Mandatory Convertible Subordinated Debentures for B. Gallego hybrid swap	122	+17 bp of core tier I
April 2015	Capital increase with pre-emptive rights - TSB	1,607	+181 bp of core tier I

Note: The impact on capital (in basis points) is calculated using figures at the close of each year, these figures have changed significantly due to the increase in the Group's scope during these years.

## 6 – RISKS

During 2016, Banco Sabadell Group has continued to strengthen its risk management framework, incorporating improvements which align it with the best practices in the financial sector.

For more details regarding the corporate risk culture, the risk appetite framework and the global organisation of the risks function, as well as the main financial and non-financial risks, see Note 4 *Financial Risk Management* in the consolidated annual accounts for 2016.

This year's main milestones in terms of the Group's risk management have been the strengthening of the Risk Appetite Framework, giving it an international focus point, and the improvement of the Group's risk profile over the year, as explained in greater detail in Note 4 of the annual report.

## 7 – POST-BALANCE SHEET EVENTS

Since 31 December 2016, there have been no significant events worthy of mention.

## 8 - EXPECTED FUTURE DEVELOPMENTS

Banco Sabadell adopts three-year strategic plans in which it sets out its objectives for subsequent years in line with the regulatory and macroeconomic environment.

The 2014-2016 business plan, called Triple, was based on three main pillars. The first pillar was based on improving profitability. In this regard, we have been able to consolidate our leadership in terms of domestic business and significantly improve our customer spread.

The second pillar of the Triple plan was based on transformation, of both the balance sheet and of the commercial and production model. In terms of the transformation of our balance sheet, it should be noted that the balance of both non-performing assets and that of problematic assets has been significantly reduced, surpassing our original objectives. In terms of commercial transformation, technological capacities have been developed which have allowed us to continue improving customers' experience (trust, service delivery, transparency and convenience), which allow us to be the current leaders in service quality in SMEs and Corporates. Lastly, the transformation of the production model has improved the efficiency of our entity, and we are now one of the best entities within the Spanish banking industry.

The final pillar of the Triple plan is based on internationalisation. Today, over 30% of the Group's lending is generated outside of Spain (amply surpassing the plan's objective of 10%). The main milestones that have been achieved include the acquisition of British bank TSB and the entry into the Mexican market, after obtaining a licence to operate in this country as a commercial bank.

Following the success of the Triple Plan, Banco Sabadell is starting 2017 with an even more ambitious strategic plan, which will be developed following a 1 + 3 structure, with 2017 as a transition year during which TSB will be fully integrated into the Group.

The strategic objectives set forth for the 2020 horizon include, amongst others, the consolidation of the business in markets in which we currently operate, together with the reduction of non-performing problematic assets, with a view to achieving a normalised cost of risk level. Banco Sabadell will also focus on establishing an efficient management model, by deploying the necessary technological capabilities to perform its digital business.

## 9 – RESEARCH, DEVELOPMENT AND INNOVATION

2016 has been characterised by the TSB project, with a strong impact on the technological organisation, which has been restructured to take on the project with the utmost guaranties. Internationally, the bank has continued working on its project in Mexico to develop a full-service bank for corporates and individuals.

A Systems Plan has been conducted in parallel, as intensively as in the previous year, in line with the objectives of the Triple business plan for 2014-2016.

In terms of boosting commercial management, the implementation of the new campaign management tool has been completed and the project for developing a business portfolio of relationship managers and customer files has continued, and is already in its user testing phase ahead of its implementation in 2017. The 'Alta de Cliente Cuenta' project has been started up, the aims of which include simplifying the contracting of the basic Expansión Account package and optimising its functionality. This application is available both in branches and on tablets for relationship managers who travel frequently, allowing 100% of customer on-boarding to be carried out remotely, without the customer having to visit the branch, thanks to the incorporation of a biometric signature.

In terms of corporate mobility, the system whereby relationship managers can operate using tablets has been fully developed and deployed. Relationship managers can perform various operations using their tablet, including operations involving the product catalogue/offering, as well as operating, monitoring, reporting and contracting simulations, allowing relationship managers to perform all their activities whilst outside of their offices.

As regards Insurance Systems, a multi-simulator has been developed which uses minimum information about the customer in order to generate a proposition centred on five products: Car, Home, Health, Life and Funeral insurance, offering a package deal with optimum conditions, which allows relationship managers to interact with the generated proposition while negotiating with the customer, making the management of this type of operation extremely dynamic.

In terms of markets, the Proteox project has developed a new key feature for the distribution of Forex products in the field of Treasury. From the beginning, the application, which is built on the Reuters pricing service and a front-end web technology, HTML5 Responsive, has been easily adaptable to multi-channel environments (Treasury Room, Branches and Banco Sabadell Online) and multi-platform environments (desktop, mobile and tablet). It allows the bank's full distribution of Forex products to be centralised in a single application.

As regards the Corporate Administration Systems, the most noteworthy actions performed during the year are related to projects for the adaptation of hub and spoke branch management systems and the Remote Management Branch Network. Also worthy of mention in the field of Human Resources are new projects for internal talent management, training and recruitment.

## **10 – TREASURY SHARE SALES AND BUYBACKS**

For information on treasury sales and buybacks see Note 25 to the annual report.

## **11 – OTHER RELEVANT INFORMATION**

## a) Shares and share price information

Some indicators of the bank's share performance are shown in the following table:

	0010	0045	Change (%)
	2016	2015	year-on-year
Shareholders and buybacks			
Number of shareholders	260,948	265,935	(1.9)
Number of shares	5,616,151,196	5,439,244,992	3.3
Average daily buybacks (number of shares)	29,994,232	32,155,802	(6.7)
Share price (euro)			
Start date	1.635	2.205	-
Maximum	1.810	2.499	-
Minimum	1.065	1.577	-
End date	1.323	1.635	-
Market capitalisation (thousand euro)	7,430,168	8,893,166	-
Market ratios			
Earnings per share (EPS) (euro)	0.13	0.13	-
Book value per share (euro)	2.30	2.26	-
Price / book value	0.57	0.72	-
PER (share price / EPS)	10.46	12.55	-

The bank's share price fell by -19.1% in 2016, a more significant decline than the average of listed Spanish banks (-1.9%), while the IBEX-35 share price depreciated by -2.0%.

## b) Dividend policy

The bank's shareholder remuneration policy, in accordance with the bank's Articles of Association, is submitted to shareholders for approval on a yearly basis at the General Meeting of Shareholders.

In 2015, the bank compensated shareholders with  $\notin 0.07$  per share through a flexible remuneration scheme that offers them the chance to choose to receive this remuneration in cash and/or in new shares, and a supplementary remuneration scheme consisting in the handover of shares from the treasury portfolio. This amount represented profits on the quoted share price at year-end of 4.3%.

On 27 October 2016, the Board of Directors agreed to distribute a dividend charged to the 2016 income statement totalling €111,281 thousand (€0.02 (gross) per share), paid on 30 December 2016.

Furthermore, the Board of Directors will submit a proposal at the General Meeting of Shareholders on the distribution of a  $\in 0.05$  (gross) dividend per share for 2016.

Over the coming years, Banco Sabadell foresees a continuation of cash payments as remuneration to its shareholders.

### c) Managing the credit rating

In 2016 the three agencies that assessed the credit quality of Banco Sabadell were S&P Global Ratings, Moody's and DBRS. The current ratings, and the last dates on which they were affirmed, are as follows:

	Long-term	Short-term	Outlook	Last updated
OBRS	BBB (high)	R-1 (low)	Stable	02.08.2016
Standard & Poor's	BB+	В	Positive	02.11.2016
Moody's (*)	Baa3 / Baa2	P-3 / P-2	Stable	01.12.2016

(\*) Corresponds to senior debt and deposits, respectively

On 2 November 2016, S&P Global Ratings raised Banco Sabadell's rating outlook to positive (from stable) and confirmed the long-term rating at BB+ and the short-term rating at B. The positive outlook is mainly due to the significant improvement in asset quality, strengthening capital and consolidating the market position in Spain, as well as the geographical diversity of the various sources of income.

On 2 August 2016, DBRS Ratings Limited confirmed Banco Sabadell's long-term rating at BBB (High) and its short-term rating at R-1 (low). The resilience of business in Spain is particularly notable, along with the positive integration of TSB's business and the ability of reducing problematic assets at a faster rate than the average of its competitors. Outlooks remain stable.

On 1 December 2016, Moody's Investor Service announced the upgrade of Banco Sabadell's deposit ratings from Baa3/Prime-3 to Baa2/Prime-2 and those of senior debt from Ba1 to Baa3. The outlook for long-term deposit ratings and senior debt is stable. This rating upgrade reflects, according to Moody's Investors Service, the improvement in Banco Sabadell's fundamentals, particularly in terms of risk, with a substantial decrease in problematic assets and its steady downward trend which will continue next year.

During 2016, Banco Sabadell has met with the three agencies. At these visits and teleconferences, the discussions have addressed subjects such as the bank's strategy, TSB's performance since its acquisition, results, capital, liquidity, risks, credit quality, and the management of problematic assets.

### d) Branch network

At the end of 2016, Banco Sabadell was operating 2,767 branches (including 587 TSB branches), a net decrease of 106 branches compared with 31 December 2015 (79 fewer branches excluding TSB), that is mainly due to the optimisation of the branch network.

Of the total number of Banco Sabadell Group branches, 1,583 were operating under the Sabadell brand (including 47 business banking and 2 corporate banking branches); 123 were operating as Sabadell Gallego (including 3 business banking branches); 166 under Banco Herrero in Asturias and Leon (including 3 business banking branches); 128 were SabadellGuipuzcoano branches (including 5 business banking branches); 12 were SabadellUrquijo branches; 105 were Solbank branches; and there were 648 international branches, including 27 operated by Sabadell United Bank, 7 by BancSabadell d'Andorra and 587 by TSB. Additionally, ActivoBank has two "Active Centres" open to the public. The distribution of the Group's branches in Spain by autonomous community is as follows:

Autonomous Community	Branche	Autonomous Community	Branche
Andalusia	142	Valencia	381
Aragon	34	Extremadura	7
Asturias	134	Galicia	123
Balearic Islands	62	La Rioja	8
Canary Islands	30	Madrid	201
Cantabria	6	Murcia	141
Castilla-La Mancha	23	Navarre	18
Castilla y Leon	64	Basque Country	105
Catalonia	638	Ceuta and Melilla	2

The Group is present in the following countries:

### **Corporate Governance**

As required by Article 540 of the Spanish Capital Companies Act, Banco Sabadell Group has prepared an annual report on Corporate Governance for the year 2016, which, in accordance with Article 49 of the Spanish Commercial Code, forms part of this Directors' Report, included herein as a separate document, and which includes a section on the extent to which the bank is following recommendations on corporate governance that currently exist in Spain.

Information on Corporate Governance is available on the Group's corporate website (www.grupobancosabadell.com), and can be accessed directly from the "Corporate Governance and remuneration policy" link on this website's homepage.

# Glossary of terms on performance measures

In its presentation of its results to the market, and for the purpose of monitoring the business and decisionmaking processes, the Group uses performance measures pursuant to the generally accepted accounting regulations (IFRS-EU), and also uses other non-audited measures commonly used in the banking sector (Alternative Performance Measures, or APMs) as monitoring indicators for the management of assets and liabilities, and the financial and economic situation of the Group, which facilitates its comparison with other entities.

Following the ESMA guidelines on APMs (ESMA/2015/1415es of October 2015), the purpose of which is to promote the use and transparency of information for the protection of investors in the European Union, the Group presents below, for each APM, its definition and its use. The Group presents the reconciliation of components of APMs in the Directors' Report, with the items shown in the financial statements and their quantification for each period.

Performance indicator	Definition and calculation	Use or purpose
Loan to deposits ratio	Net loans and receivables divider subtracting brokerage loans fror and customer funds, defined in denominator.

The Group presents the reconciliation of components of APMs in the Directors' Report, with the items shown in the financial statements and their quantification for each period.

Performance indicator		Definition and calculation	Use or purpose
Loan to deposits ratio		Net loans and receivables divided by retail funding. Calculated by subtracting brokerage loans from the numerator. Retail funding and customer funds, defined in this table, are used as the denominator.	relationship between the funds available and the
Pre-provisions income		Comprised of gross income accounting entries plus administrative and depreciation expenses.	Significant indicator which reflects the evolution of the Group's consolidated profit/(loss).
Customer spread		Difference between returns and expenses of customer assets and liabilities, i.e. the contribution of transactions exclusively with customers to net interest income. Calculated considering the difference between the average rate charged by the bank on its customer loans and credit and the average rate that the bank pays for its customer deposits. The average rate on customer loans and credit is calculated as the accounting financial income on customer lending as an annualised percentage of the average daily balance of customer loans and credit. The average rate of customer funds is calculated as the accounting financial expenses on customer funds as an annualised percentage of the average daily balance of customer funds.	Indicator of the profitability of our purely banking activity.
NPL coverage ratio		Gives the percentage of non-performing loans covered by provisions. Calculated as the ratio between the impairment allowance for loans and advances to customers (including contingent liability funds) over total non-performing loans (including non-performing contingent loans).	
Cost-to-income ratio	(*)	Staff expenses and other general administrative expenses/gross income. To calculate this ratio, gross income is adjusted by linearising net trading income. The denominator includes the linear accrual of contributions to deposit guarantee funds and resolution funds except at year-end.	Main indicator of efficiency or productivity of banking activity. It is an indicator which is monitored and included in the Group's Strategic Plan for 2014-
Loan loss ratio		Expresses non-performing loans as a percentage of total customer lending. All calculation components correspond to headings or sub-headings on financial statements. Calculated as the ratio between non-performing loans, including contingent liabilities, over total customer loans and contingent liabilities. Non- performing loans are described in this table. Contingent liabilities include guarantees given and contingent commitments given.	industry to monitor the status and evolution of the quality of credit risk incurred with customers and to
Gross customer lending		Includes loans and advances to customers excluding insolvency provisions and allowances for country risk.	Key figure and one of the main business indicators for financial institutions, and which is monitored.
Gross performing loans		Includes gross customer lending excluding repos, accrual adjustments and non-performing assets.	Key figure and one of the main business indicators for financial institutions, and which is monitored.

Performance indicator		Definition and calculation	Use or purpose
On-balance sheet customer funds		Includes customer deposits (ex-repos) and other liabilities allocated by the branch network (Banco Sabadell non-convertible bonds, promissory notes and others).	Key figure and one of the main balances in the Group's consolidated balance sheet, and which is monitored.
Off-balance sheet customer funds		Includes mutual funds, equity management, pension funds and insurance products sold by the Group.	
On-balance sheet funds		Includes accounting sub-headings of customer deposits, marketable debt securities, subordinated liabilities and liabilities under insurance and reinsurance contracts.	Key figure and one of the main business indicators for financial institutions, and which is monitored.
Funds under management		The sum of on-balance sheet funds and off-balance sheet customer funds.	Key figure and one of the main business indicators for financial institutions, and which is monitored.
Non-performing loans		The sum of accounting headings of non-performing assets within loans and advances to customers together with non-performing guarantees given.	Key figure and one of the main indicators used in the banking industry to monitor the status and evolution of the quality of credit risk incurred with customers and to assess the management of that risk.
Problematic assets		The sum of non-performing loans and foreclosed real estate assets.	Indicator of the total exposure to risks and non- performing assets, including real estate assets.
Foreclosed available-for-sale real estate assets coverage ratio		This calculation gives the ratio between impairment allowances for foreclosed real estate assets divided by total foreclosed real estate assets. The amount of foreclosed real estate assets includes properties classified in the portfolio of non-current assets and disposal groups classified as held for sale.	This indicator gives the entity's real estate asset
ROA	(*) (**)	Consolidated profit/(loss) during the year / average total assets. Considers annualised linearisation of profits obtained to date adjusted by the relative accrual of contributions to deposit guarantee and resolution funds. The total average are the weighted moving average of total assets during the last twelve calendar months.	Measurement commonly used in the financial industry to determine the accounting profitability of the Group assets.
ROE	(*) (***)	Profit attributed to the Group / average own funds. The numerator uses the linear annualisation of profits obtained to date adjusted by the relative accrual of contributions to deposit guarantee and resolution funds. The denominator excludes profit attributed to the Group as part of own funds.	industry to determine the accounting profitability of
RORWA	(*)	Consolidated results for the year/ risk-weighted assets (RWA).	An additional measurement of profit, calculated through risk-weighted assets divided by the Group's risk level.
ROTE	(*) (***)	Profit attributed to the Group / average own funds. The numerator uses the linear annualisation of profits obtained to date adjusted by the relative accrual of contributions to deposit guarantee and resolution funds. The denominator excludes profit attributed to the Group as own funds and goodwill.	Additional measure of profit obtained from equity, although goodwill is excluded from the calculation. This indicator is included in the Group's strategic plan for 2014-2016, and its evolution is monitored.
Market capitalisation		Calculated by multiplying the share price by the number of shares in circulation at the closing date of the period.	It is an economic market indicator or market ratio that gives the total value of a company in line with market prices.
Earnings per share		This divides net profit attributed to the Group by the number of shares in circulation at the closing date of the period. The numerator uses the linear annualisation of profits obtained to date adjusted by the relative accrual of contributions to deposit guarantee and resolution funds except at year-end.	that indicates the profitability of a company, and is one of the most commonly used measurements to
Book value per share		Calculated by dividing the book value by the number of shares at the closing date of the period. Book value refers to the sum of own funds, using the linear annualisation of profit obtained to date adjusted by the relative accrual of contributions to deposit guarantee and resolution funds, except at year-end.	that determines the "book" or carrying value of a company for each security in the possession of
Price/book value		Calculated by dividing the share price by the book value.	An economic measurement or market ratio commonly used by the market, which compares the share price against the book value of that share.
Price/earnings ratio	(*)	Calculated by dividing the share price by the net attributable profit per share.	An economic measurement or market ratio commonly used by the market, which is representative of the market's assessment of a company's profit-generating capacity.

(\*) The linear accrual of the contribution to deposit guarantee and resolution funds during the first three quarters of the year has been made based on the Group's best estimates. (\*\*) Average calculated based on average daily balances. (\*\*\*) Average calculated based on the last 13 positions at the end of the month.
